CONTENTS

FOREWORD.....	9
INTRODUCTION.....	11
1 Scope.....	12
2 Normative references	12
3 Abbreviations	13
4 General requirements	14
4.1 General.....	14
4.1.1 Overview	14
4.1.2 General requirements	14
4.1.3 Capabilities of the AIS	15
4.1.4 Additional requirements	15
4.1.5 Transmitter shutdown procedure.....	15
4.1.6 Quality assurance	15
4.2 Modes of operation.....	15
4.3 Manuals	15
4.4 Marking and identification.....	16
5 Other requirements.....	16
5.1 Environmental, power supply, special purpose and safety requirements	16
5.2 Display of information.....	16
6 Performance requirements	16
6.1 Composition	16
6.2 Time and position	17
6.2.1 Source for UTC	17
6.2.2 Source for AIS position reporting	17
6.3 User interface.....	17
6.4 Identification.....	18
6.5 Information	18
6.5.1 Information provided by the AIS.....	18
6.5.2 Information reporting intervals	19
6.5.3 Ship reporting capacity	19
6.6 Event log	20
6.7 Permissible initialization period	20
6.8 Power supply.....	20
6.9 Technical characteristics	20
6.10 Alarms and indications, fall-back arrangements	20
6.10.1 Built-in test equipment.....	20
6.10.2 Alarm messages	21
6.10.3 Status messages	23
6.11 Display, input and output.....	26
6.11.1 Minimum keyboard and display (MKD).....	26
6.11.2 Communication test.....	28
6.11.3 Alarms and status information	29
6.11.4 Data protection	29
6.11.5 Distance calculation	29
6.12 Protection from invalid controls	30
7 Technical requirements	30

7.1	General	30
7.2	Physical layer	30
7.2.1	General	31
7.2.2	Transmitter parameters	31
7.2.3	Receiver parameters	32
7.3	Link layer	32
7.3.1	General	32
7.3.2	Link sublayer 1: Medium Access Control (MAC).....	33
7.3.3	Link sublayer 2: Data Link Service (DLS).....	33
7.3.4	Link sublayer 3 – Link Management Entity (LME)	33
7.4	Network layer	35
7.4.1	General	35
7.4.2	Management of regional operating settings	35
7.5	Transport layer	37
7.6	Presentation interface	37
7.6.1	General	37
7.6.2	Automatic input of sensor data	38
7.6.3	High speed input/output ports	38
7.6.4	Long-range communication ports	41
7.6.5	BIIT alarm output.....	43
8	Long-range applications	43
8.1	General	43
8.2	Long-range application by two-way interface	43
8.2.1	General	43
8.2.2	Interrogations and responses	44
8.2.3	Manual and automatic response	44
8.2.4	Data formats and contents.....	44
8.2.5	Addressing AIS-units	44
8.3	Long-range application by broadcast	45
9	Test conditions	45
9.1	Normal and extreme test conditions.....	45
9.1.1	Normal test conditions	45
9.1.2	Extreme test conditions	45
9.2	Standard test environment.....	46
9.3	Additional test arrangements	46
9.3.1	Arrangements for test signals applied to the receiver input	46
9.3.2	Encoder for receiver measurements	46
9.3.3	Waiver for receivers	46
9.3.4	Impedance.....	47
9.3.5	Artificial antenna (dummy load)	47
9.3.6	Facilities for access	47
9.3.7	Modes of operation of the transmitter	47
9.4	Common test conditions for protection from invalid controls	47
9.5	Measurement uncertainties	47
10	Test signals	48
10.1	Standard test signal number 1 (DSC)	48

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MARITIME NAVIGATION AND
RADIOCOMMUNICATION EQUIPMENT AND SYSTEMS –
AUTOMATIC IDENTIFICATION SYSTEMS (AIS)****Part 2: Class A shipborne equipment of the automatic identification
system (AIS) – Operational and performance requirements, methods of
test and required test results**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61993-2 has been prepared by IEC technical committee 80: Maritime navigation and radiocommunication equipment and systems.

This second edition cancels and replaces the first edition, published in 2001. This edition constitutes a technical revision.

This edition includes the following technical changes with respect to the previous edition:

It incorporates the technical characteristics included in Recommendation ITU-R M.1371-4 which was published in 2010. New technical characteristics result in sundry clarifications to the requirements and the ability to handle five new messages – Messages 23, 24, 25, 26 and 27.

The significant changes in this edition include:

- a new requirement in 6.9 for vessels of type “tanker” to use a low power setting;
- expanded requirements for the functionality of the minimum keyboard and display in 6.11 including new requirements for display of AIS-SART together with an AIS-SART alarm and new requirements for the protection of the static data of the ship;
- expanded requirements for the transmitters and receivers in 7.2 but with the removal of the previous requirement for 12,5 kHz channel operation which has not been used in practice;
- expanded requirements for long-range applications in Clause 8 to add a broadcast method;
- a definition of the pilot plug pin out in 7.6 together with some new requirements for interfaces;
- extensively revised test methods in Clauses 14 to 19 based on the experience of testing AIS equipment;
- expanded test methods in Annex D for DSC functionality but the removal of the previous requirement for DSC polling which is no longer used.

The text of this standard is based on the following documents:

CDV	Report on voting
80/656/CDV	80/675/RVC

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

INTRODUCTION

In comparison with the previous edition of this Standard, the structural changes to the document are that the original Clause 8 on DSC compatibility together with the corresponding tests in Clause 20 have been moved into a new Annex D. A new Clause on test signals has been added as Clause 10. The original Annex B detailing IEC 61162 sentences has been deleted and replaced with a new Annex H, noting that much of this information is now included in IEC 61162-1. The original Annex C describing long-range applications has also been deleted as IMO has decided to adopt a different system for long-range identification and tracking. A new Annex E has been added to describe optional presentation interface port sentences, a new Annex F has been added on alarm handling and a new Annex G has been added on calculation of area size and distance.

MARITIME NAVIGATION AND RADIOCOMMUNICATION EQUIPMENT AND SYSTEMS – AUTOMATIC IDENTIFICATION SYSTEMS (AIS)

Part 2: Class A shipborne equipment of the automatic identification system (AIS) – Operational and performance requirements, methods of test and required test results

1 Scope

This part of IEC 61993 specifies the minimum operational and performance requirements, methods of testing and required test results conforming to performance standards adopted by the IMO in Resolution MSC.74(69), Annex 3, Shipborne Automatic Identification System. This standard incorporates the applicable technical characteristics of Class A shipborne equipment included in Recommendation ITU-R M.1371-4 and takes into account the ITU Radio Regulations, where applicable. In addition, it takes account of IMO Resolution A.694(17) to which IEC 60945 is associated. When a requirement in this standard is different from IEC 60945, the requirement of this standard takes precedence.

This part of IEC 61993 also specifies the minimum requirements both for the means to input and display data and for the interfaces to other equipment suitable to be used as means of input and display data.

NOTE All text of this standard, that is identical to that in IMO resolution MSC.74(69), Annex 3 or to that in ITU-R Recommendation M.1371-4 is printed in *italics* and references to the resolution (abbreviated to "A3") or the recommendation (abbreviated to "M.1371") and paragraph numbers are indicated in parentheses, for instance (A3/3.3) or (M.1371/A2-3.3) respectively.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
