## **Elektriska friledningar över 45 kV (AC)**

*Overhead electrical lines exceeding AC 45 kV*

Som svensk standard gäller europastandarden EN 50341-1:2001 med tillägget EN 50341-1:2001/A1:2009. Den svenska standarden innehåller den officiella engelska språkversionen av EN 50341-1:2001 och EN 50341-1:2001/A1:2009.

### **Nationellt förord**

Europastandarden EN 50341:2001 består av tre delar:

EN 50341-1, som innehåller avsnitt gemensamma för hela CENELEC

EN 50341-2, som är en innehållsförteckning till del 3, och

EN 50341-3, som innehåller nationella normativa bilagor, vilka ger de fordringar som i respektive land gäller utöver eller istället för fordringarna i motsvarande avsnitt i del 1.

Denna SS-EN 50341-1 innehåller den officiella engelska språkversionen av EN 50341-1:2001 och tillägget EN 50341-1:2001/A1:2009.

Standarden ska användas tillsammans med SS-EN 50341-3-18, utgåva 1, 2013.

Innehållet i denna standard SS-EN 50341-1 gäller i Sverige tillsammans med den tillhörande svenska normativa bilagan som faststälts och utgivits separat som SS-EN 50341-3-18, utgåva 1, 2013.

EN 50341-1:2001 fastställdes 2007 som SS-EN 50341 (med den i EN 50341-3-18 ingående svenska normativa bilagan inarbetad i texten) och EN 50341-1:2001/A1:2009 fastställdes 2010 som SS-EN 50341-1/A1 (utan svensk normativ bilaga). Dessa tidigare fastställda svenska standarder SS-EN 50341, utgåva 1, 2007 och SS-EN 50341-1/A1, utgåva 1, 2010 och den separat utgivna rättelsen SS-EN 50341 C1, utgåva 1, 2010, gäller inte från 03 m 2013-07-03.

## *Standarder underlättar utvecklingen och höjer elsäkerheten*

Det finns många fördelar med att ha gemensamma tekniska regler för bl a säkerhet, prestanda, dokumentation, utförande och skötsel av elprodukter, elanläggningar och metoder. Genom att utforma sådana standarder blir säkerhetskraven tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

## *SEK är Sveriges röst i standardiseringssarbetet inom elområdet*

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

## *Stora delar av arbetet sker internationellt*

Utdriften av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringssarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringssverksamhet och medlemsavgift till IEC och CENELEC.

## *Var med och påverka!*

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtidens standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

Gemeinsame Festlegungen

This European Standard was approved by CENELEC on 2001-01-01. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

## Foreword

This European Standard was prepared by the Technical Committee CENELEC TC 11, Overhead electrical lines exceeding AC 1 kV (DC 1,5 kV).

The text of the draft was submitted to the Unique Acceptance Procedure and was approved by CENELEC as EN 50341-1 on 2001-01-01.

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2002-05-01
- latest date by which the national standards conflicting with the EN have to be withdrawn (dow) 2004-01-01

Annexes designated "normative" are part of the body of the standard.

Annexes designated "informative" are given for information only.

In this standard, annexes E, G, J & K are normative and annexes A, B, C, D, F, H, L, M, N, P, Q & R are informative.

As far as the overhead lines towers are concerned, the designer may refer to prEN 1993-7-1, currently referred to as ENV 1993-3-1, as prepared by TC 250 of CEN, if considered appropriate.

---

## Contents

<b>Introduction.....</b>	<b>12</b>
<b>1 Scope.....</b>	<b>14</b>
<b>2 Definitions, symbols and references.....</b>	<b>14</b>
2.1 Definitions.....	14
2.2 List of symbols .....	26
2.3 References.....	32
<b>3 Basis of design.....</b>	<b>36</b>
3.1 General.....	36
3.2 Requirements.....	38
3.2.1 <i>Basic requirements</i> .....	38
3.2.2 <i>Reliability of overhead lines</i> .....	38
3.2.3 <i>Security requirements</i> .....	39
3.2.4 <i>Safety requirements during construction and maintenance</i> .....	39
3.2.5 <i>Coordination of strength</i> .....	39
3.2.6 <i>Additional considerations</i> .....	40
3.2.7 <i>Design working life</i> .....	40
3.2.8 <i>Durability</i> .....	40
3.2.9 <i>Quality assurance</i> .....	40
3.3 Limit states .....	40
3.3.1 <i>General</i> .....	40
3.3.2 <i>Ultimate limit states</i> .....	40
3.3.3 <i>Serviceability limit states</i> .....	41
3.3.4 <i>Limit state design</i> .....	41
3.4 Actions.....	42
3.4.1 <i>Principal classifications</i> .....	42
3.4.2 <i>Characteristic values of actions</i> .....	43
3.4.3 <i>Combination values of variable actions</i> .....	43
3.5 Material properties .....	43
3.6 Modelling for structural analysis and resistance.....	44
3.6.1 <i>General</i> .....	44
3.6.2 <i>Interactions between support foundations and soil</i> .....	44
3.7 Design values and verification method.....	44
3.7.1 <i>General</i> .....	44
3.7.2 <i>Design values</i> .....	45
3.7.3 <i>Basic design equation</i> .....	45
3.7.4 <i>Combination of actions</i> .....	46
<b>4 Actions on lines.....</b>	<b>47</b>
4.1 Introduction.....	47
4.2 Actions, General approach .....	47
4.2.1 <i>Permanent loads</i> .....	47
4.2.2 <i>Wind loads</i> .....	47
4.2.3 <i>Ice loads</i> .....	56
4.2.4 <i>Combined wind and ice loads</i> .....	58
4.2.5 <i>Temperature effects</i> .....	60
4.2.6 <i>Construction and maintenance loads</i> .....	60
4.2.7 <i>Security loads</i> .....	61
4.2.8 <i>Forces due to short circuit currents</i> .....	62
4.2.9 <i>Other special forces</i> .....	62
4.2.10 <i>Load cases</i> .....	62
4.2.11 <i>Partial factors for actions</i> .....	66

4.3	<i>Actions, Empirical approach</i> .....	67
4.3.1	<i>Permanent loads</i> .....	67
4.3.2	<i>Wind loads</i> .....	67
4.3.3	<i>Ice loads</i> .....	68
4.3.4	<i>Combined wind and ice loads</i> .....	68
4.3.5	<i>Temperature effects</i> .....	68
4.3.6	<i>Construction and maintenance loads</i> .....	68
4.3.7	<i>Security loads</i> .....	68
4.3.8	<i>Forces due to short circuit currents</i> .....	69
4.3.9	<i>Other special forces</i> .....	69
4.3.10	<i>Load cases</i> .....	69
4.3.11	<i>Partial factors for actions</i> .....	70
<b>5.</b>	<b>Electrical requirements</b> .....	<b>71</b>
5.1	<i>Voltage classification</i> .....	71
5.2	<i>Currents</i> .....	72
5.2.1	<i>Normal current</i> .....	72
5.2.2	<i>Short-circuit current</i> .....	72
5.3	<i>Insulation co-ordination</i> .....	73
5.3.1	<i>General</i> .....	73
5.3.2	<i>Origin and classification of voltage stresses on overhead lines and evaluation of the representative overvoltages</i> .....	73
5.3.3	<i>Determination of the co-ordination withstand voltage</i> .....	74
5.3.4	<i>Determination of the required withstand voltage</i> .....	76
5.3.5	<i>Electrical clearance distances to avoid flashover</i> .....	76
5.4	<i>Internal and external clearances</i> .....	81
5.4.1	<i>Introduction</i> .....	81
5.4.2	<i>General considerations and load cases</i> .....	81
5.4.3	<i>Clearances within the span and at the tower</i> .....	84
5.4.4	<i>Clearances to ground in areas remote from buildings, roads, railways and navigable waterways</i> .....	85
5.4.5	<i>Clearances to buildings, traffic routes, other lines and recreational areas</i> .....	86
5.5	<i>Corona effect</i> .....	92
5.5.1	<i>Radio noise</i> .....	92
5.5.2	<i>Audible noise</i> .....	93
5.5.3	<i>Corona loss</i> .....	93
5.6	<i>Electric and magnetic fields</i> .....	94
5.6.1	<i>Electric and magnetic fields under a line</i> .....	94
5.6.2	<i>Electric and magnetic field induction</i> .....	94
5.6.3	<i>Interference with telecommunication circuits</i> .....	95
<b>6.</b>	<b>Earthing systems</b> .....	<b>95</b>
6.1	<i>Purpose</i> .....	95
6.2	<i>Dimensioning of earthing systems at power frequency</i> .....	95
6.2.1	<i>General</i> .....	95
6.2.2	<i>Dimensioning with respect to corrosion and mechanical strength</i> .....	96
6.2.3	<i>Dimensioning with respect to thermal strength</i> .....	97
6.2.4	<i>Dimensioning with regard to human safety</i> .....	97
6.3	<i>Construction of earthing systems</i> .....	101
6.3.1	<i>Installation of earth electrodes</i> .....	101
6.3.2	<i>Transferred potentials</i> .....	101
6.4	<i>Earthing measures against lightning effects</i> .....	102
6.5	<i>Measurements for and on earthing systems</i> .....	102

A.1 Recommended design criteria .....	141
A.2 Proposed strength coordination .....	141
<b>Annex B (informative) Extreme wind speeds and ice loads .....</b>	<b>143</b>
B.1 Definition of symbols used in this annex .....	143
B.2 Evaluation of extreme wind speed data .....	143
B.3 Definition of extreme ice load .....	144
B.4 Statistical ice parameters .....	145
B.4.1 Basic ice load .....	145
B.4.2 Maximum yearly ice load $I_m$ .....	145
B.4.3 Maximum ice load over several years $I_{max}$ .....	145
B.4.4 Mean value $I_{mm}$ of maximum yearly ice loads .....	145
B.4.5 Coefficient of variation $v_i$ for maximum yearly ice loads .....	145
B.5 Extreme ice load evaluation based on various data sources .....	145
B.5.1 Data sources for statistical evaluation .....	145
B.5.2 Yearly maxima ice loads during periods of at least 10 years are available .....	146
B.5.3 Maximum ice load $I_{max}$ is known only for a limited number of years .....	146
B.5.4 Evaluation of annual maximum ice load by means of analyses of meteorological data ...	146
B.6 Combination of wind speeds and ice loads .....	147
B.6.1 Extreme ice load $I_L$ combined with a moderate wind speed $V_{IH}$ .....	147
B.6.2 High wind speed $V_{IL}$ combined with a moderate ice load $I_H$ .....	147
<b>Annex C (informative) Special forces .....</b>	<b>148</b>
C.1 Definition of symbols used in this annex .....	148
C.2 Forces due to short circuit currents .....	148
C.3 Avalanches, creeping snow .....	149
C.4 Earthquakes .....	149
<b>Annex D (informative) Statistical data for the Gumbel distribution of extremes .....</b>	<b>150</b>
D.1 Definition of symbols used in this annex .....	150
D.2 The Gumbel distribution .....	150
D.3 Example of using $C_1$ and $C_2$ .....	154
D.4 Calculation of $C_1$ and $C_2$ .....	154
<b>Annex E (normative) Electrical requirements.....</b>	<b>158</b>
E.1 Definition of symbols used in this annex .....	158
E.2 Insulation co-ordination.....	159
E.2.1 Development of theoretical formulae for calculating electrical distances .....	159
E.2.2 Required withstand voltage of the air $U_{rw}$ .....	159
E.2.3 Overvoltages to be taken into account .....	162
E.2.4 Calculation formulae .....	164
E.2.5 Altitude factor .....	164
<b>Annex F (informative) Electrical requirements.....</b>	<b>166</b>
F.1 Definition of symbols used in this annex .....	166
F.2 Insulation co-ordination. Examples of calculation of $D_{el}$ , $D_{pp}$ and $D_{50Hz}$ for different system voltages .....	166
F.2.1 Range I: 90 kV system equipped with insulator strings composed of 6 units .....	166
F.2.2 Range I: 90 kV system equipped with insulator strings composed of 9 units .....	168
F.2.3 Range II: 400 kV system .....	169

<b>Annex G (normative) Earthing systems.....</b>	<b>172</b>
G.1 Definition of symbols used in this annex .....	172
G.2 Minimum dimensions of earth electrode materials ensuring mechanical strength and corrosion resistance.....	173
G.3 Current rating calculation.....	174
G.4 Touch voltage and body current .....	177
G.4.1 <i>Equivalence between touch voltage and body current.</i> .....	177
G.4.2 <i>Calculation taking into account additional resistances</i> .....	179
G.5 Measuring touch voltages.....	180
G.6 Reduction factor related to earthwires of overhead lines .....	180
G.6.1 <i>General</i> .....	180
G.6.2 <i>Values of reduction factors of overhead lines</i> .....	181
<b>Annex H (informative) Earthing systems.....</b>	<b>182</b>
H.1 Definition of symbols used in this annex .....	182
H.2 Basis for the verification .....	182
H.2.1 <i>Soil resistivity</i> .....	182
H.2.2 <i>Resistance to earth</i> .....	183
H.3 Installation of earth electrodes and earthing conductors.....	186
H.3.1 <i>Installation of earth electrodes</i> .....	186
H.3.2 <i>Installation of earthing conductors</i> .....	186
H.4 Measurements for and on earthing systems.....	187
H.4.1 <i>Measurement of soil resistivities</i> .....	187
H.4.2 <i>Measurement of resistances to earth and impedances to earth</i> .....	187
H.4.3 <i>Determination of the earth potential rise</i> .....	189
<b>Annex J (normative) Lattice steel towers .....</b>	<b>190</b>
J.1 Definition of symbols used in this annex .....	190
J.2 Classification of cross sections .....	191
J.2.1 <i>Basis</i> .....	191
J.2.2 <i>Classification</i> .....	191
J.2.3 <i>Effective cross-section properties for compression numbers</i> .....	191
J.3 Section properties.....	192
J.3.1 <i>Gross cross section</i> .....	192
J.3.2 <i>Net area</i> .....	192
J.4 Check of cross section resistance.....	193

R.1.4 <i>Environmental parameters</i> .....	233
R.2 Packing and delivery of fittings .....	234
R.3 Precautions during installation of fittings.....	234

## Introduction

### Detailed structure of the standard

The standard comprises three parts:

#### **Part 1: General requirements - Common specifications**

This part, also referred to as the Main Body, includes clauses common to all countries. These clauses have been prepared by Working Groups and approved by CLC/TC 11.

The Main Body is available in English, French and German.

#### **Part 2: Index of National Normative Aspects**

This index gives the list of all the National Normative Aspects (NNAs) - see signification and contents of NNAs hereafter under "Part 3: National Normative Aspects".

The index is available in English, French and German.

#### **Part 3: National Normative Aspects**

The National Normative Aspects (NNAs) reflect national practices. They generally include A-deviations, special national conditions and national complements.

##### **A-deviations:**

A-deviations are required by existing national laws or regulations, which cannot be altered at the time of preparation of the standard.

Reference is made to CENELEC Internal Regulations Part 2, definition 3.1.9.

##### **Special national conditions (snc):**

Special national conditions are national characteristics or practices that cannot be changed even over a long period, e.g. those due to climatic conditions, earth resistivity, etc.

Reference is made to CENELEC Internal Regulations, Part 2, definition 3.1.7/ 3.1.9.

**National complements (NCPTs):**

National complements reflect national practices, which are neither A-deviations, nor special national conditions. It has been agreed within CLC/TC 11 that NCPTs should be gradually adapted to the Main Body, aiming at the usual EN standard structure including only a Main Body, A-deviations and special national conditions.

**Rules for the numbering of NNAs:**

The NNAs are numbered as follows :

AT	Austria	EN 50341-3-1
BE	Belgium	EN 50341-3-2
CH	Switzerland	EN 50341-3-3
DE	Germany	EN 50341-3-4
DK	Denmark	EN 50341-3-5
ES	Spain	EN 50341-3-6
FI	Finland	EN 50341-3-7
FR	France	EN 50341-3-8
GB	Great Britain	EN 50341-3-9
GR	Greece	EN 50341-3-10
IE	Ireland	EN 50341-3-11
IS	Iceland	EN 50341-3-12
IT	Italy	EN 50341-3-13
LU	Luxembourg	EN 50341-3-14 (non existant)
NL	Netherlands	EN 50341-3-15
NO	Norway	EN 50341-3-16
PT	Portugal	EN 50341-3-17
SE	Sweden	EN 50341-3-18
CZ	Czech Republic	EN 50341-3-19
x	xxxx	EN 50341-3-xx, etc.

**Language:**

The NNAs are published in English and in the national language(s) of the respective country.

## 1 Scope

This standard applies to overhead electric lines with rated voltages exceeding 45 kV AC and with rated frequencies below 100 Hz.

This standard specifies the general requirements that shall be met for the design and construction of new overhead lines to ensure that the line is suitable for its purpose with regard to safety of persons, maintenance, operation and environmental considerations.

NOTE 1 The extent of the application of this standard by each country in respect of existing overhead lines is subject to the requirements of the National Normative Aspects (NNAs) applicable to that country.

NOTE 2 Design and construction of overhead lines with insulated conductors, where internal and external clearances can be smaller than specified in the standard are not included. All other requirements of the standard may be applied to overhead lines with insulated conductors. When necessary, requirements for clearances can be given in the NNAs.

NOTE 3 This part of the standard is applicable for optical Ground Wires (OPGWs) and optical Conductors (OPCONs). However the standard is not applicable to telecommunication systems which are used on overhead transmission lines either attached to the transmission line conductor/earth wire system (for example wraparound,...) or as separate cables supported by the transmission supports for example All Dielectric Self Supporting (ADSS) or for telecommunication equipment mounted on individual transmission line structures. When necessary, requirements can be given in the NNAs.

This standard does not apply to :

- overhead electric lines inside closed electrical areas as defined in HD 637;
- catenary systems of electrified railways.
