## Registrering och överföring av standardiserade ontologier för produkter med (hjälp av datasatser i form av) kalkylblad – Del 1: Logisk struktur för datasatser

*Standardized product ontology register and transfer by spreadsheets –  
Part 1: Logical structure for data parcels*

Som svensk standard gäller europastandarden EN 62656-1:2015. Den svenska standarden innehåller den officiella engelska språkversionen av EN 62656-1:2015.

### Nationellt förord

Europastandarden EN 62656-1:2015

består av:

- **europastandardens ikraftsättningsdokument**, utarbetat inom CENELEC
- **IEC 62656-1, First edition, 2014 - Standardized product ontology register and transfer by spreadsheets - Part 1: Logical structure for data parcels**

utarbetad inom International Electrotechnical Commission, IEC.

### *Standarder underlättar utvecklingen och höjer elsäkerheten*

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

### *SEK är Sveriges röst i standardiseringsarbetet inom elområdet*

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

### *Stora delar av arbetet sker internationellt*

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

### *Var med och påverka!*

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

English Version

## Standardized product ontology register and transfer by spreadsheets - Part 1: Logical structure for data parcels (IEC 62656-1:2014)

Enregistrement d'ontologie de produits normalisés et transfert par tableurs - Partie 1: Structure logique pour les paquets de données (IEC 62656-1:2014)

Standardisierte Übertragung und Registrierung von Ontologien für Produkte mittels Tabellen - Teil 1: Logische Struktur der Datenpakete (IEC 62656-1:2014)

This European Standard was approved by CENELEC on 2014-09-30. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## Foreword

The text of document 3D/226/FDIS, future edition 1 of IEC 62656-1, prepared by IEC/SC 3D "Product properties and classes and their identification", of IEC/TC 3 "Information structures, documentation and graphical symbols", was submitted to the IEC-CENELEC parallel vote and was approved by CENELEC as EN 62656-1.

The following dates were fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2015-07-09
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2017-09-30

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

## Endorsement notice

The text of the International Standard IEC 62656-1:2014 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

IEC 61360-4	NOTE	Harmonized as EN 61360-4.
IEC 61968 (Series)	NOTE	Harmonized as EN 61968 (Series).
IEC 61970 (Series)	NOTE	Harmonized as EN 61970 (Series).
ISO 10303 (Series)	NOTE	Harmonized as EN ISO 10303 (Series).
ISO 80000 (Series)	NOTE	Harmonized as EN ISO 80000 (Series).

## Annex ZA (normative)

### Normative references to international publications with their corresponding European publications

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 When an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this annex is available here: [www.cenelec.eu](http://www.cenelec.eu).

<u>Publication</u>	<u>Year</u>	<u>Title</u>	<u>EN/HD</u>	<u>Year</u>

## CONTENTS

FOREWORD.....	8
INTRODUCTION.....	10
1 Scope.....	11
2 Normative references .....	12
3 Terms and definitions .....	13
4 Parcel use cases and scenarios.....	18
4.1 Typical use cases .....	18
4.2 Spreadsheet representation of dictionary or library .....	18
4.3 Use scenario of dictionary parcel format .....	19
4.4 Use scenario of library parcel format .....	20
4.5 Use scenario of parcel format of higher layers .....	21
5 The Parcellized Ontology Model (POM).....	21
5.1 Overview of the parcel structure .....	21
5.2 Meta dictionary approach .....	24
5.3 Identification structure.....	25
5.4 Typical modelling constructs of POM .....	27
5.4.1 Specialization tree versus composition tree .....	27
5.4.2 Property specialization .....	27
5.4.3 Divide between specialization and generalization.....	28
5.4.4 Property specialization and cardinality.....	29
5.4.5 Property specialization and alternate ID.....	30
5.4.6 Mapping classes and properties by alternate ID .....	30
5.4.7 Unit with variable prefix.....	31
5.4.8 Dependent condition .....	31
5.4.9 Use of dependent condition for time dependent property .....	32
5.4.10 Class valued property .....	32
5.4.11 Class selector with class valued property and class reference.....	33
5.4.12 Metamorphic or polymorphic classes .....	33
5.5 Type system extension for data parcels .....	34
5.5.1 Extended data types and updates from IEC 61360-2:2002 .....	34
5.5.2 ICID_STRING .....	34
5.5.3 IRDI_STRING .....	34
5.5.4 STRING_TYPE and its extensions .....	34
5.5.5 STRING_TYPE and its enumerated simple subtypes.....	35
5.5.6 STRING_TYPE and its enumerated reference subtypes .....	35
5.6 Structure of a parcelling sheet.....	36
5.7 File name extension .....	37
5.8 CSV representation of parcel format .....	37
5.9 Basic use of parcels .....	38
5.10 Header section.....	38
5.10.1 Categories of instructions.....	38
5.10.2 Mandatory .....	38
5.10.3 Optional - functional.....	39
5.10.4 Optional - informative.....	39
5.10.5 Comment.....	39
5.10.6 Reserved words .....	39

5.11	Instruction Column .....	39
5.11.1	General rule.....	39
5.11.2	Class ID.....	39
5.11.3	Preferred name of the class .....	40
5.11.4	Definition of the class.....	40
5.11.5	Note for the class.....	41
5.11.6	Alternate class ID.....	41
5.11.7	Super alternate class ID .....	42
5.11.8	Sub-alternate class ID.....	42
5.11.9	Source language.....	42
5.11.10	Parcel mode .....	43
5.11.11	Parcel identifier.....	43
5.11.12	Parcel conformance class identifier .....	44
5.11.13	Default supplier.....	44
5.11.14	Default version.....	45
5.11.15	Default data supplier .....	45
5.11.16	Default data version .....	46
5.11.17	Data object identifier name.....	47
5.11.18	Property ID .....	47
5.11.19	Preferred name of the property.....	48
5.11.20	Definition .....	49
5.11.21	Note .....	50
5.11.22	Data type.....	50
5.11.23	Unit of measurement.....	51
5.11.24	Requirement .....	52
5.11.25	Alternative units of measurement .....	52
5.11.26	Variable prefix for the unit .....	53
5.11.27	Super property .....	54
5.11.28	Alternate property ID.....	54
5.11.29	Super alternate ID.....	55
5.11.30	Sub-alternate ID of property .....	56
5.11.31	Equivalent property ID.....	57
5.11.32	ID for the unit of measurement .....	57
5.11.33	Property value format.....	58
5.11.34	Identifier encoding .....	58
5.11.35	Cell delimiter.....	59
5.11.36	Decimal mark.....	59
5.11.37	Pattern constraint.....	60
5.11.38	Relational constraint .....	60
5.12	Data section for instances .....	61
5.12.1	General .....	61
5.12.2	Enumeration types or non quantitative types.....	62
5.12.3	Level type .....	62
5.12.4	String type .....	63
5.12.5	Translatable string type.....	63
5.12.6	Boolean type.....	63
5.12.7	Class reference type (Class instance type) .....	63
5.12.8	Aggregate type .....	64
5.12.9	Named type .....	66

5.12.10	Placement types .....	67
5.12.11	Entity instance type.....	67
6	Use of parcel for Domain Ontology description .....	67
6.1	Dictionary as an instance of meta-dictionary .....	67
6.2	Identification of conjunctive parcels .....	70
6.3	Roles and definition of dictionary parcels.....	70
6.4	Properties of meta-dictionary (meta-ontology).....	71
6.4.1	Overview of meta-classes .....	71
6.4.2	Meta-properties for dictionary meta-class .....	72
6.4.3	Meta-properties for class meta-class .....	73
6.4.4	Meta-properties for property meta-class.....	74
6.4.5	Meta-properties for supplier meta-class .....	75
6.4.6	Meta-properties for enumeration meta-class .....	76
6.4.7	Meta-properties for data-type meta-class.....	77
6.4.8	Meta-properties for document meta-class .....	77
6.4.9	Meta-properties for object meta-class .....	78
6.4.10	Meta-properties for UoM meta-class .....	78
6.4.11	Meta-properties for term meta-class .....	79
6.4.12	Meta-properties for relation meta-class.....	80
7	Use of parcel for meta-ontology (MO) description .....	84
7.1	Overview of meta-meta-classes .....	84
7.2	Meta-properties for class meta-meta-class.....	85
7.3	Meta-properties for property meta-meta-class.....	85
7.4	Meta-properties for term meta-meta-class.....	86
7.5	Meta-properties for relation meta-meta-class .....	87
8	Mechanism for structural extension .....	87
8.1	General.....	87
8.2	Example .....	88
9	Conformance classes for parcelling spreadsheet.....	88
Annex A	(normative) Information object registration.....	90
Annex B	(normative) Meta-dictionary file and updates.....	91
Annex C	(normative) Reserved words.....	92
Annex D	(normative) Description examples of data types.....	95
Annex E	(normative) Meta-properties used by normative meta-classes .....	98
Annex F	(normative) Properties for optional meta-classes.....	119
Annex G	(normative) Predefined classes and properties in Meta-Ontology .....	130
G.1	General.....	130
G.2	Predefined meta-classes in Meta-Ontology .....	130
G.3	Predefined meta-properties in meta-ontology .....	133
Annex H	(normative) Predefined meta-relations in meta-ontology.....	153
Annex I	(normative) Axiomatic properties used by each Meta-meta-class .....	156
Annex J	(normative) Predefined classes and properties in Axiomatic Ontology.....	164
J.1	General.....	164
J.2	Predefined meta-classes in Axiomatic Ontology .....	164
J.3	Predefined meta-properties in Axiomatic ontology.....	166
Annex K	(informative) Mapping of meta-properties to EXPRESS .....	173
K.1	EXPRESS mapping for mandatory meta-classes.....	173

K.2	EXPRESS mapping for optional meta-classes.....	182
Annex L (informative)	Meta-class properties mapped with DIN 4002.....	186
Annex M (informative)	Use case of relation for units and quantities.....	199
Annex N (informative)	Guide for the use of placement data types.....	202
N.1	Primitive coordinates.....	202
N.2	EXPRESS language codes.....	203

# INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

## STANDARDIZED PRODUCT ONTOLOGY REGISTER AND TRANSFER BY SPREADSHEETS –

### Part 1: Logical structure for data parcels

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62656-1 has been prepared by subcommittee 3D, Product properties and classes and their identification, of IEC technical committee 3: Information structures, documentation and graphical symbols.

The text of this standard is based on the following documents:

FDIS	Report on voting
3D/226/FDIS	3D/229/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 62656 series, published under the general title *Standardized product ontology register and transfer by spreadsheets*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

IEC 62656 consists of the following parts, under the general title *Standardized product ontology register and transfer by spreadsheets*:

- Part 1: Logical structure for data parcels;
- Part 2: Application guide for use with IEC CDD;
- Part 31: Interface for common information model.

---

<sup>1</sup> To be published.

## STANDARDIZED PRODUCT ONTOLOGY REGISTER AND TRANSFER BY SPREADSHEETS –

### Part 1: Logical structure for data parcels

#### 1 Scope

This part of IEC 62656 specifies the logical structure for a set of spreadsheets, used as “data parcels”, to define, transfer and register product ontologies. Such ontology descriptions in other literatures or disciplines are sometimes called “reference dictionaries”. Thus the logical data structure described in this standard is named “Parcellized Ontology Model” or “POM” for short, and each vehicle of transport of the model is called a “parcel”, and may be used for definition, transfer, and registering of a reference dictionary as a collection of metadata, or for similar purposes for instances belonging to a certain class of the reference dictionary. Moreover, this ontology model allows for modelling or modifying an ontology model per se as a set of instance data, thus it enables an ontology model to evolve over time.

This part of IEC 62656 also includes a standard mapping between the meta-data of dictionary parcels in the spreadsheet format conforming to this standard and the meta-data represented in IEC 61360-2 compliant EXPRESS model for dictionary exchange.

It is assumed that a tool supporting this part of IEC 62656 may read and write a set of spreadsheet data whose semantics and syntax are defined in this part of standard, where the physical file structure of the spreadsheets may be based on the CSV (Comma Separated Values) format, typically used in a commercial spreadsheet application, or any other tabular formats including XML schema compatible or convertible to the CSV format.

The spreadsheet interface structure defined in this part of IEC 62656 contains the following:

- Definition and specification of the logical structure and layout of the spreadsheet interface for definition, transfer, and registering of a reference dictionary;
- Definition and specification of library instance data belonging to a class of a reference dictionary described by a set of spreadsheets conformant to this part of IEC 62656;
- Definition and specification of the meta dictionary that enables the definition and transfer of a reference dictionary as a set of instance data conforming to the meta dictionary;
- Definition and specification of the meta-model as data that enables the definition and transfer of a reference dictionary as a set of instance data conforming to the meta-meta-dictionary
- Specification of the mapping between the dictionary data expressed in the spreadsheet format and the EXPRESS model specified by IEC 61360-2/ISO 13584-42 (with some elements of ISO 13584-25);
- Description of the basic semantic mapping between the dictionary data expressed in the spreadsheet formats defined in this part of IEC 62656 and that of DIN 4002.

The following items are outside the scope of this part of IEC 62656:

- Explanation of the CSV format per se, used in spreadsheet applications;
- Presentation of the data parcels conformant to this part of IEC 62656, such as colouring and sizing of the spreadsheets;
- Specification of the dictionary EXPRESS model conformant to IEC 61360 or ISO 13584 series of standards;
- Normative definition of the mappings between an IEC 61360-ISO 13584 compliant dictionary and another that is based upon a standard other than IEC 61360-ISO 13584;

- Specification of the maintenance procedure of this part of IEC 62656.

This standard is closely related with ISO 13584-35, and developed as a superset or generalisation of the latter. A major difference with the ISO 13584-35 is that this IEC standard enables updates and evolutions in a meta dictionary consisting of meta classes, by which the changes and evolution of an ontology model is realised as an update and modification of the meta dictionary, just by updates and modifications of the instances of the meta-meta dictionary. With this capability, mapping and interfacing with other ontology standards are also facilitated.

## 2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
