About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigenda or an amendment might have been published.

IEC Catalogue - webstore.iec.ch/catalogue

The stand-alone application for consulting the entire bibliographical information on IEC International Standards, Technical Specifications, Technical Reports and other documents. Available for PC, Mac OS, Android Tablets and iPad.

IEC publications search - www.iec.ch/searchpub

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and also once a month by email.

Electropedia - www.electropedia.org

The world's leading online dictionary of electronic and electrical terms containing more than 30 000 terms and definitions in English and French, with equivalent terms in 15 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

More than 60 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

CONTENTS

FOREWORD.....	5
INTRODUCTION.....	7
1 Scope.....	8
2 Normative references	8
3 Terms , definitions and abbreviations	9
3.1 Terms and definitions.....	9
3.2 Abbreviations	11
3.2.1 Chemical names and symbols formula	11
3.2.2 General abbreviations.....	11
4 Mechanisms of gas formation	12
4.1 Decomposition of oil	12
4.2 Decomposition of cellulosic insulation	12
4.3 Stray gassing of oil	12
4.4 Other sources of gas.....	13
5 Identification of faults	13
5.1 General	13
5.2 Dissolved gas compositions	13
5.3 Types of faults	14
5.4 Basic gas ratios	14
5.5 CO ₂ /CO ratio	16
5.6 O ₂ /N ₂ ratio	16
5.7 C ₂ H ₂ /H ₂ ratio.....	17
5.8 C ₃ hydrocarbons.....	17
5.9 Evolution of faults	17
5.10 Graphical representations	17
6 Conditions for calculating ratios.....	18
6.1 Examination of DGA values	18
6.2 Uncertainty on gas ratios	18
7 Application to free gases in gas relays.....	19
8 Gas concentration levels in service.....	20
8.1 Probability of failure in service	20
8.1.1 General	20
8.1.2 Calculation methods	21
8.2 Typical concentration values.....	21
8.2.1 General	21
8.2.2 Calculation methods	21
8.2.3 Choice of normality percentages.....	22
8.2.4 Alarm concentration values.....	22
8.3 Rates of gas increase	22
9 Recommended method of DGA interpretation (see Figure 1)	23
10 Report of results	23
Annex A (informative) Equipment application notes.....	25
A.1 General warning	25
A.2 Power transformers.....	25
A.2.1 Specific sub-types	25

A.2.2	Typical faults	26
A.2.3	Identification of faults by DGA	26
A.2.4	Typical concentration values.....	27
A.2.5	Typical rates of gas increase	28
A.2.6	Specific information to be added to the DGA report (see Clause 10)	29
A.3	Industrial and special transformers	30
A.3.1	Specific sub-types	30
A.3.2	Typical faults	30
A.3.3	Identification of faults by DGA.	30
A.3.4	Typical concentration values.....	30
A.4	Instrument transformers	31
A.4.1	Specific sub-types	31
A.4.2	Typical faults	31
A.4.3	Identification of faults by DGA	31
A.4.4	Typical concentration values.....	32
A.5	Bushings.....	32
A.5.1	Specific sub-types	32
A.5.2	Typical faults	32
A.5.3	Identification of faults by DGA	33
A.5.4	Typical concentration values.....	33
A.6	Oil-filled cables	34
A.6.1	Typical faults	34
A.6.2	Identification of faults by DGA	34
A.6.3	Typical concentration values.....	34
A.7	Switching equipment.....	34
A.7.1	Specific sub-types	34
A.7.2	Normal operation	34
A.7.3	Typical faults	35
A.7.4	Identification of faults by DGA	35
A.8	Equipment filled with non-mineral fluids	36
Annex B (informative)	Graphical representations of gas ratios (see 5.10)	37
Bibliography.....		41
Figure 1	– Flow chart	24

Table 1	– DGA interpretation table	15
Table 2	– Simplified scheme of interpretation.....	15
Table 3	– Ostwald solubility coefficients for various gases in mineral insulating oils.....	20
Table A.1	– Typical faults in power transformers	26
Table A.2	– Ranges of 90 % typical gas concentration values observed in power transformers (all types) , in µl/l	27

Table A.3 – ~~Typical rates of gas increase for power transformers~~ Ranges of 90 %
typical rates of gas increase observed in power transformers (all types), in $\mu\text{l/l/year}$ 29

Table A.4 – Examples of 90 % typical concentration values observed on ~~a typical~~
individual networks ~~(all types of transformers)~~ 30

Table A.5 – Typical faults in instrument transformers 31

Table A.6 – Ranges of 90 % typical concentration values observed in instrument
transformers 32

Table A.7 – Maximum admissible values for sealed instrument transformers 32

Table A.8 – Typical faults in bushings 33

Table A.9 – Simplified interpretation scheme for bushings 33

Table A.10 – 95 % typical concentration values in bushings 34

Table A.11 – Ranges of 95 % typical concentration values observed on cables 34

Table A.12 – Typical faults in switching equipment 35

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**MINERAL OIL-~~IMPREGNATED~~ FILLED ELECTRICAL EQUIPMENT
IN SERVICE – GUIDANCE ON THE INTERPRETATION
OF DISSOLVED AND FREE GASES ANALYSIS**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

DISCLAIMER

This Redline version is not an official IEC Standard and is intended only to provide the user with an indication of what changes have been made to the previous version. Only the current version of the standard is to be considered the official document.

This Redline version provides you with a quick and easy way to compare all the changes between this standard and its previous edition. A vertical bar appears in the margin wherever a change has been made. Additions are in green text, deletions are in strikethrough red text.

International Standard IEC 60599 has been prepared by IEC technical committee 10: Fluids for electrotechnical applications.

This third edition cancels and replaces the second edition published in 1999 and Amendment 1:2007. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) revision of 5.5, 6.1, 7, 8, 9, 10, A.2.6, A.3, A.7;
- b) addition of new sub-clause 4.3;
- c) expansion of the Bibliography;
- d) revision of Figure 1;
- e) addition of Figure B.4.

The text of this standard is based on the following documents:

FDIS	Report on voting
10/967/FDIS	10/973/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The “colour inside” logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this publication using a colour printer.

INTRODUCTION

Dissolved and free gas analysis (DGA) is one of the most widely used diagnostic tools for detecting and evaluating faults in electrical equipment filled with insulating liquid. However, interpretation of DGA results is often complex and should always be done with care, involving experienced insulation maintenance personnel.

This International Standard gives information for facilitating this interpretation. The first edition, published in 1978, has served the industry well, but had its limitations, such as the absence of a diagnosis in some cases, the absence of concentration levels and the fact that it was based mainly on experience gained from power transformers. The second edition attempted to address some of these shortcomings. Interpretation schemes were based on observations made after inspection of a large number of faulty oil-filled equipment in service and concentrations levels deduced from analyses collected worldwide.

MINERAL OIL-~~IMPREGNATED~~ FILLED ELECTRICAL EQUIPMENT IN SERVICE – GUIDANCE ON THE INTERPRETATION OF DISSOLVED AND FREE GASES ANALYSIS

1 Scope

This International Standard describes how the concentrations of dissolved gases or free gases may be interpreted to diagnose the condition of oil-filled electrical equipment in service and suggest future action.

This standard is applicable to electrical equipment filled with mineral insulating oil and insulated with cellulosic paper or pressboard-based solid insulation. Information about specific types of equipment such as transformers (power, instrument, industrial, railways, distribution), reactors, bushings, switchgear and oil-filled cables is given only as an indication in the application notes (see Annex A).

This standard may be applied, but only with caution, to other liquid-solid insulating systems.

In any case, the indications obtained should be viewed only as guidance and any resulting action should be undertaken only with proper engineering judgment.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
