Elektriska friledningar över 1 kV (AC) – Del 1: Allmänna fordringar – Gemensamma specifikationer

*Overhead electrical lines exceeding AC 1 kV –
Part 1: General requirements –
Common specifications*

Som svensk standard gäller europastandarden EN 50341-1:2012. Den svenska standarden innehåller den officiella engelska språkversionen av EN 50341-1:2012.

Nationellt förord

Den europeiska standarden EN 50341 består av två delar:

- EN 50341-1:2012, som innehåller avsnitt gemensamma för hela CENELEC
- EN 50341-2, som innehåller nationella normativa bilagor, vilka ger de fordringar som i respektive land gäller utöver eller istället för fordringarna i motsvarande avsnitt i del 1.

Denna utgåva 2 av standarden SS-EN 50341-1 innehåller den officiella engelska språkversionen av EN 50341-1:2012. Den gäller i Sverige tillsammans med den tillhörande svenska normativa bilagan som återfinns i SS-EN 50341-2-18, utgåva 1, 2017.

Tidigare fastställd svensk standard SS-EN 50341-1, utgåva 1, 2013, SS-EN 50341-3-18, utgåva 1, 2013 och SS-EN 50423, utgåva 3, 2013, gäller ej från 2017-07-01.

ANM – För användning tillsammans med den nationella normativa bilagan för något annat land kan den tidigare utgåvan av SS-EN 50341-1 fortsätta att gälla, enligt vad som angivits för det landet.

ICS 29.240.20

Standarder underlättar utvecklingen och höjer elsäkerheten

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

SEK är Sveriges röst i standardiseringsarbetet inom elområdet

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

Stora delar av arbetet sker internationellt

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

Var med och påverka!

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

EN 50341-1

December 2012

ICS 29.240.20

Supersedes EN 50341-1:2001 + A1:2009, EN 50423-1:2005

English version

**Overhead electrical lines exceeding AC 1 kV -
Part 1: General requirements -
Common specifications**

Lignes électriques aériennes dépassant
AC 1 kV -
Partie 1: Règles générales -
Spécifications communes

Freileitungen über AC 1 kV -
Teil 1: Allgemeine Anforderungen -
Gemeinsame Festlegungen

This European Standard was approved by CENELEC on 2012-11-19. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Foreword	17
0 Introduction.....	18
0.1 Detailed structure of the standard	18
0.2 Part 1: General requirements - Common specifications	18
0.3 Part 2: National Normative Aspects	18
0.4 A-deviations	18
0.5 Special national conditions (snc)	18
0.6 National complements (NCPTs)	18
0.7 Language	18
1 Scope.....	19
1.1 General.....	19
1.2 Field of application	19
1.3 Structure of the European Standard EN 50341-1	19
2 Normative references, definitions and symbols	20
2.1 Normative references.....	20
2.2 Definitions	26
2.3 Symbols	35
3 Basis of design.....	43
3.1 Introduction	43
3.2 Requirements of overhead lines	44
3.2.1 Basic requirements	44
3.2.2 Reliability requirements	45
3.2.3 Security requirements.....	46
3.2.4 Safety requirements.....	47
3.2.5 Strength coordination.....	47
3.2.6 Additional considerations.....	47
3.2.7 Design working life.....	47
3.2.8 Durability	47
3.2.9 Quality assurance	47
3.3 Limit states	47
3.3.1 General	47
3.3.2 Ultimate limit states.....	47
3.3.3 Serviceability limit states.....	48
3.4 Actions.....	48
3.4.1 Principal classifications.....	48
3.4.2 Classification of actions by their variation in time	48

3.4.3	Classification of actions by their nature and/or the structural response	49
3.5	Characteristic values.....	49
3.5.1	Characteristic value of an action	49
3.5.1.1	Action (F)	49
3.5.1.2	Permanent action (G)	49
3.5.1.3	Variable action (Q)	49
3.5.1.4	Accidental action (A).....	49
3.5.2	Characteristic value of a material property.....	49
3.6	Design values.....	49
3.6.1	General	49
3.6.2	Design value of an action	49
3.6.3	Design value of a material property.....	50
3.6.4	Combination value of a variable action.....	50
3.7	Partial factor method and design formula	50
3.7.1	Partial factor method.....	50
3.7.2	Basic design formula	51
3.7.3	Total design value of the effect of combined actions	51
3.7.3.1	General	51
3.7.3.2	Design situations related to permanent and variable actions	51
3.7.3.3	Design situations related to permanent, variable and accidental actions.....	51
3.7.4	Structural design resistance	52
4	Actions on lines.....	53
4.1	Introduction	53
4.2	Permanent loads	55
4.3	Wind loads	55
4.3.1	Field of application and basic wind velocity.....	55
4.3.2	Mean wind velocity	55
4.3.3	Mean wind pressure	56
4.3.4	Turbulence intensity and peak wind pressure	57
4.3.5	Wind forces on any overhead line component	57
4.4	Wind forces on overhead line components	58
4.4.1	Wind forces on conductors	58
4.4.1.1	General	58
4.4.1.2	Structural factor.....	60
4.4.1.3	Drag factor	63

4.4.2	Wind forces on insulator sets	63
4.4.3	Wind forces on lattice towers.....	64
4.4.3.1	General	64
4.4.3.2	Method 1	64
4.4.3.3	Method 2	67
4.4.4	Wind forces on poles	68
4.5	Ice loads	69
4.5.1	General	69
4.5.2	Ice forces on conductors.....	70
4.6	Combined wind and ice loads	70
4.6.1	Combined probabilities	70
4.6.2	Drag factors and ice densities	71
4.6.3	Mean wind pressure and peak wind pressure.....	72
4.6.4	Equivalent diameter D of ice covered conductor.....	72
4.6.5	Wind forces on support for ice covered conductors	72
4.6.6	Combination of wind velocities and ice loads	73
4.6.6.1	Extreme ice load I_T combined with a high probability wind velocity V_{IH}	73
4.6.6.2	Nominal ice load I_3 combined with a low probability wind velocity V_{IL}	73
4.7	Temperature effects	74
4.8	Security loads.....	74
4.8.1	General	74
4.8.2	Torsional loads	75
4.8.3	Longitudinal loads.....	75
4.8.4	Mechanical conditions of application	75
4.9	Safety Loads	75
4.9.1	Construction and maintenance loads	75
4.9.2	Loads related to the weight of linesmen.....	76
4.10	Forces due to short-circuit currents	76
4.11	Other special forces	76
4.11.1	Avalanches, creeping snow.....	76
4.11.2	Earthquakes.....	76
4.12	Load cases.....	76
4.12.1	General	76
4.12.2	Standard load cases.....	77
4.13	Partial factors for actions.....	80

5 Electrical requirements.....	81
5.1 Introduction	81
5.2 Currents	82
5.2.1 Normal current	82
5.2.2 Short-circuit current	82
5.3 Insulation co-ordination	83
5.4 Classification of voltages and overvoltages.....	83
5.4.1 General	83
5.4.2 Representative power frequency voltages	83
5.4.3 Representative temporary overvoltages.....	84
5.4.4 Representative slow-front overvoltages	84
5.4.5 Representative fast-front overvoltages.....	85
5.5 Minimum air clearance distances to avoid flashover	85
5.5.1 General	85
5.5.2 Application of the theoretical method in Annex E	86
5.5.3 Empirical method based on European experience.....	89
5.6 Load cases for calculation of clearances.....	90
5.6.1 Load conditions.....	90
5.6.2 Maximum conductor temperature.....	90
5.6.3 Wind loads for determination of electric clearances	90
5.6.3.1 Wind load cases.....	90
5.6.3.2 Nominal wind loads for determination of internal and external clearances	91
5.6.3.3 Extreme wind loads for determination of internal clearances	91
5.6.4 Ice loads for determination of electric clearances	91
5.6.5 Combined wind and ice loads.....	91
5.7 Coordination of conductor positions and electrical stresses.....	91
5.8 Internal clearances within the span and at the top of support	92
5.9 External clearances.....	96
5.9.1 General	96
5.9.2 External clearances to ground in areas remote from buildings, roads, etc.	97
5.9.3 External clearances to residential and other buildings	98
5.9.4 External clearances to crossing traffic routes	99
5.9.5 External clearances to adjacent traffic routes.....	100
5.9.6 External clearances to other power lines or overhead telecommunication lines...	101
5.9.7 External clearances to recreational areas (playgrounds, sports areas, etc.)	102
5.10 Corona effect.....	103

5.10.1.1	General	103
5.10.1.2	Design influences	103
5.10.1.3	Noise limits.....	103
5.10.2.1	General	103
5.10.2.2	Design influences	104
5.10.2.3	Noise limit	104
5.10.3	Corona loss.....	104
5.11	Electric and magnetic fields	104
5.11.1	Electric and magnetic fields under a line	104
5.11.2	Electric and magnetic field induction	105
5.11.3	Interference with telecommunication circuits.....	105
6	Earthing systems	106
6.1	Introduction	106
6.1.1	Purpose.....	106
6.1.2	Requirements for dimensioning of earthing systems	106
6.1.3	Earthing measures against lightning effects.....	107
6.1.4	Transferred potentials.....	107
6.2	Ratings with regard to corrosion and mechanical strength.....	107
6.2.1	Earth electrodes.....	107
6.2.2	Earthing and bonding conductors.....	107
6.3	Dimensioning with regard to thermal strength	107
6.3.1	General	107
6.3.2	Current rating calculation.....	108
6.4	Dimensioning with regard to human safety.....	108
6.4.1	Permissible values for touch voltages	108
6.4.2	Touch voltage limits at different locations.....	108
6.4.3	Basic design of earthing systems with regard to permissible touch voltage	110
6.4.4	Measures in systems with isolated neutral or resonant earthing	112
6.5	Site inspection and documentation of earthing systems.....	112
7	Supports.....	113
7.1	Initial design considerations.....	113
7.1.1	Introduction	113
7.1.2	Structural design resistance of a pole	113

7.1.3	Buckling Resistance	113
7.2	Materials.....	113
7.2.1	Steel materials, bolts, nuts and washers, welding consumables	113
7.2.2	Cold formed steel.....	113
7.2.3	Requirements for steel grades subject to galvanising.....	113
7.2.4	Holding-down bolts	113
7.2.5	Concrete and reinforcing steel.....	114
7.2.6	Wood.....	114
7.2.7	Guy materials.....	114
7.2.8	Other materials	114
7.3	Lattice steel towers	114
7.3.1	General	114
7.3.2	Basis of design	114
7.3.3	Materials	114
7.3.4	Durability	114
7.3.5	Structural analysis	114
7.3.6	Ultimate limit states.....	115
7.3.6.1	General	115
7.3.6.2	Resistance of cross section areas	116
7.3.6.3	Tension, bending and compression resistance of members	116
7.3.6.4	Buckling resistance of members in compression	117
7.3.6.5	Buckling resistance of members in bending	117
7.3.6.7	Serviceability limit states.....	117
7.3.8	Resistance of connections.....	117
7.3.9	Design assisted by testing	117
7.3.10	Fatigue	118
7.4	Steel poles	118
7.4.1	General	118
7.4.2	Basis of design (EN 1993-1-1:2005 – Chapter 2)	118
7.4.3	Materials (EN 1993-1-1:2005 – Chapter 3)	118
7.4.4	Durability (EN 1993-1-1:2005 – Chapter 4)	118
7.4.5	Structural analysis (EN 1993-1-1:2005 – Chapter 5)	118
7.4.6	Ultimate limit states (EN 1993-1-1:2005 – Chapter 6).....	118
7.4.6.1	General	118

7.4.6.2	Resistance of cross section areas	119
7.4.7	Serviceability limit states (EN 1993-1-1:2005 – Chapter 7).....	119
7.4.8	Resistance of connections.....	119
7.4.8.1	Basis	119
7.4.8.2	Bolts (other than holding-down bolts)	119
7.4.8.3	Slip joint connections	120
7.4.8.4	Flanged bolted connections.....	120
7.4.8.5	Welded connections	120
7.4.8.6	Direct embedding into the concrete.....	120
7.4.8.7	Base plate and holding-down bolts.....	121
7.4.9	Design assisted by testing	121
7.5	Wood poles	121
7.5.1	General	121
7.5.2	Basis of design	121
7.5.3	Materials	121
7.5.4	Durability	121
7.5.5	Ultimate limit states.....	121
7.5.5.1	Basis	121
7.5.5.2	Calculation of internal forces and moments	122
7.5.5.3	Resistance of wood elements.....	122
7.5.5.4	Decay conditions	123
7.5.6	Serviceability limit states.....	123
7.5.7	Resistance of connections.....	123
7.5.8	Design assisted by testing	123
7.6	Concrete poles	123
7.6.1	General	123
7.6.2	Basis of design	124
7.6.2.1	General rules	124
7.6.2.2	Design load	124
7.6.2.3	Lateral reinforcement.....	124
7.6.3	Materials	124
7.6.4	Ultimate limit states.....	124
7.6.5	Serviceability limit states.....	124
7.6.6	Design assisted by testing	125

7.7 Guyed structures	125
7.7.1 General	125
7.7.2 Basis of design	125
7.7.3 Materials	125
7.7.4 Ultimate limit states.....	125
7.7.4.1 Basis	125
7.7.4.2 Calculation of internal forces and moments	126
7.7.4.3 Second order analysis	127
7.7.4.4 Maximum slendernesses	127
7.7.5 Serviceability limit states.....	127

10.8 Durability requirements	142
10.8.1 General requirements for durability of insulators.....	142
10.8.2 Protection against vandalism.....	142
10.8.3 Protection of ferrous materials.....	142
10.8.4 Additional corrosion protection	142
10.9 Material selection and specification	142
10.10 Characteristics and dimensions of insulators.....	142
10.11 Type test requirements	143
10.11.1 Standard type tests.....	143
10.11.2 Optional type tests	143
10.12 Sample test requirements	143
10.13 Routine test requirements	144
10.14 Summary of test requirements	144
10.15 Test reports and certificates.....	144
10.16 Selection, delivery and installation of insulators	144
11 Hardware.....	145
11.1 Introduction	145
11.2 Electrical requirements.....	145
11.2.1 Requirements applicable to all fittings	145
11.2.2 Requirements applicable to current carrying fittings	145
11.3 RIV requirements and corona extinction voltage	145
11.4 Magnetic characteristics.....	145
11.5 Short circuit current and power arc requirements	145
11.6 Mechanical requirements	146
11.7 Durability requirements	146
11.8 Material selection and specification	146
11.9 Characteristics and dimensions of fittings.....	146
11.10 Type test requirements	146
11.10.1 Standard type tests.....	146
11.10.2 Optional type tests	147
11.11 Sample test requirements	147
11.12 Routine test requirements	147
11.13 Test reports and certificates.....	147
11.14 Selection, delivery and installation of fittings	147

12	Quality assurance, checks and taking-over.....	148
12.1	Quality assurance	148
12.2	Checks and taking-over	148
Annex A (informative) Strength coordination	149	
A.1	Recommended design criteria	149
A.2	Proposed strength coordination	149
Annex B (informative) Conversion of wind velocities and ice loads	151	
B.1	Definition of symbols used in this annex B	151
B.2	Evaluation of extreme wind velocity data.....	151
B.3	Evaluation of extreme ice load data.....	152
B.4	Statistical ice parameters.....	153
B.4.1	Basic ice load, I_B	153
B.4.2	Yearly maximum ice load, I_m	153
B.4.3	Maximum ice load over several years, I_{max}	153
B.4.4	Mean value, I_{mm} of yearly maximum ice loads	153
B.4.5	Coefficient of variation, v_i for yearly maximum ice loads.....	153
B.5	Extreme ice load evaluation based on various data sources	153
B.5.1	Data sources for statistical evaluation.....	153
B.5.2	Yearly maxima ice loads, I_m during periods of at least 10 years are available	154
B.5.3	Maximum ice load, I_{max} is known only for a limited number of years.....	154
B.5.4	Yearly maximum ice load, I_m , based on meteorological analyses.....	154
Annex C (informative) Application examples of wind loads - Special forces	155	
C.1	Application examples of the calculation of wind loads as defined in 4.3 and 4.4.....	155
C.1.1	Example 1 : Typical 24 kV wood pole tangent support	155
C.1.2	Example 2 : Typical 225 kV suspension lattice tower	157
C.2	Special forces	159
C.2.1	Definition of symbols used in this annex C.2	159
C.2.2	Forces due to short-circuit currents.....	159
C.2.3	Avalanches, creeping snow.....	160
C.2.4	Earthquakes	160
Annex D (informative) Statistical data for the Gumbel distribution of extremes.....	161	
D.1	Definition of symbols used in this annex	161
D.2	The Gumbel distribution.....	161
D.3	Example of using C_1 and C_2	164

Foreword

This document (EN 50341-1:2012) has been prepared by CLC/TC 11 "Overhead electrical lines exceeding 1 kV a.c. (1,5 kV d.c.)".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2013-11-19
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2016-11-19

This document supersedes EN 50341-1:2001 + A1:2009 and EN 50423-1:2005.

The most significant technical changes that have been made are:

- EN 50341-1 takes into account distribution and transmission overhead lines by merging EN 50341-1:2001 + A1:2009 and EN 50423-1;
- EN 50341-1 is consistent with recent editions of Eurocodes;
- one unique method is described concerning the determination of actions on line;
- new design methods and new developments are included.

EN 50341 is divided into the following parts:

- EN 50341-1, Overhead electrical lines exceeding AC 1 kV — Part 1: General requirements — Common specifications
- EN 50341-2, Overhead electrical lines exceeding AC 1 kV — Part 2: National Normative Aspects

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC [and/or CEN] shall not be held responsible for identifying any or all such patent rights.

0 Introduction

0.1 Detailed structure of the standard

The standard comprises two parts, numbered Part 1 and Part 2.

0.2 Part 1: General requirements - Common specifications

This part, also referred to as the Main Body, includes clauses common to all countries. These clauses have been prepared by Working Groups and approved by CLC/TC 11.

The Main Body is available in English, French and German.

0.3 Part 2: National Normative Aspects

The index lists the existing National Normative Aspects (NNAs) related to the different countries; a NNA for a country is normative in that country and informative in other countries.

The National Normative Aspects (NNAs) reflect national practices. They generally include A-deviations, special national conditions and national complements.

0.4 A-deviations

A-deviations are required by existing national laws or regulations, which cannot be altered at the time of preparation of the standard.

Reference is made to CENELEC Internal Regulations Part 2, definition 2.17.

0.5 Special national conditions (snc)

Special national conditions are national characteristics or practices that cannot be changed even over a long period, e.g. those due to climatic conditions, earth resistivity, etc.

Reference is made to CENELEC Internal Regulations, Part 2, definition 2.15.

0.6 National complements (NCPTs)

National complements reflect national practices, which are neither A-deviations, nor special national conditions. It has been agreed within CLC/TC 11 that NCPTs should be gradually adapted to the Main Body, aiming at the usual EN standard structure including only a Main Body, A-deviations and special national conditions.

0.7 Language

The NNAs are published in English and may be published additionally in the national language(s) of the respective country.

1 Scope

1.1 General

This European Standard applies to new overhead electric lines with nominal system voltages exceeding AC 1 kV and with rated frequencies below 100 Hz.

The extent of the application of this standard by each country in respect of existing overhead lines is subject to the requirements of the National Normative Aspects (NNA) applicable to that country.

The specific definition as to the meaning and extent of a “new overhead line” is to be identified by each National Committee (NC) within their own NNA. At the least, it shall mean a totally new line between two points, A and B.

1.2 Field of application

This European Standard also applies to covered conductor overhead lines and overhead insulated cable systems with nominal system voltage exceeding AC 1 kV up to and including AC 45 kV and with rated frequencies below 100 Hz. Additional requirements and simplifications are specified that apply only for this voltage range.

Design and construction of overhead lines with insulated conductors, where internal and external clearances can be smaller than specified in the standard, are not included for lines exceeding 45 kV. Other requirements of the Standard may be applicable, and where necessary NNAs should be consulted.

This European Standard is applicable for optical Ground Wires (OPGWs) and optical Conductors (OPCONs). However the standard is not applicable to telecommunication systems which are used on overhead transmission lines either attached to the transmission line conductor/earth wire system (e.g. wraparound, etc.) or as separate cables supported by the transmission supports for example All Dielectric Self Supporting (ADSS) or for telecommunication equipment mounted on individual transmission line structures. When such cases are necessary, requirements can be given in the NNAs.

This European Standard does not apply to:

- overhead electric lines inside closed electrical areas as defined in EN 61936-1;
- catenary systems of electrified railways, unless explicitly required by another standard.

1.3 Structure of the European Standard EN 50341-1

Normative references, definitions and symbols with their significations are listed in Clause 2 below.

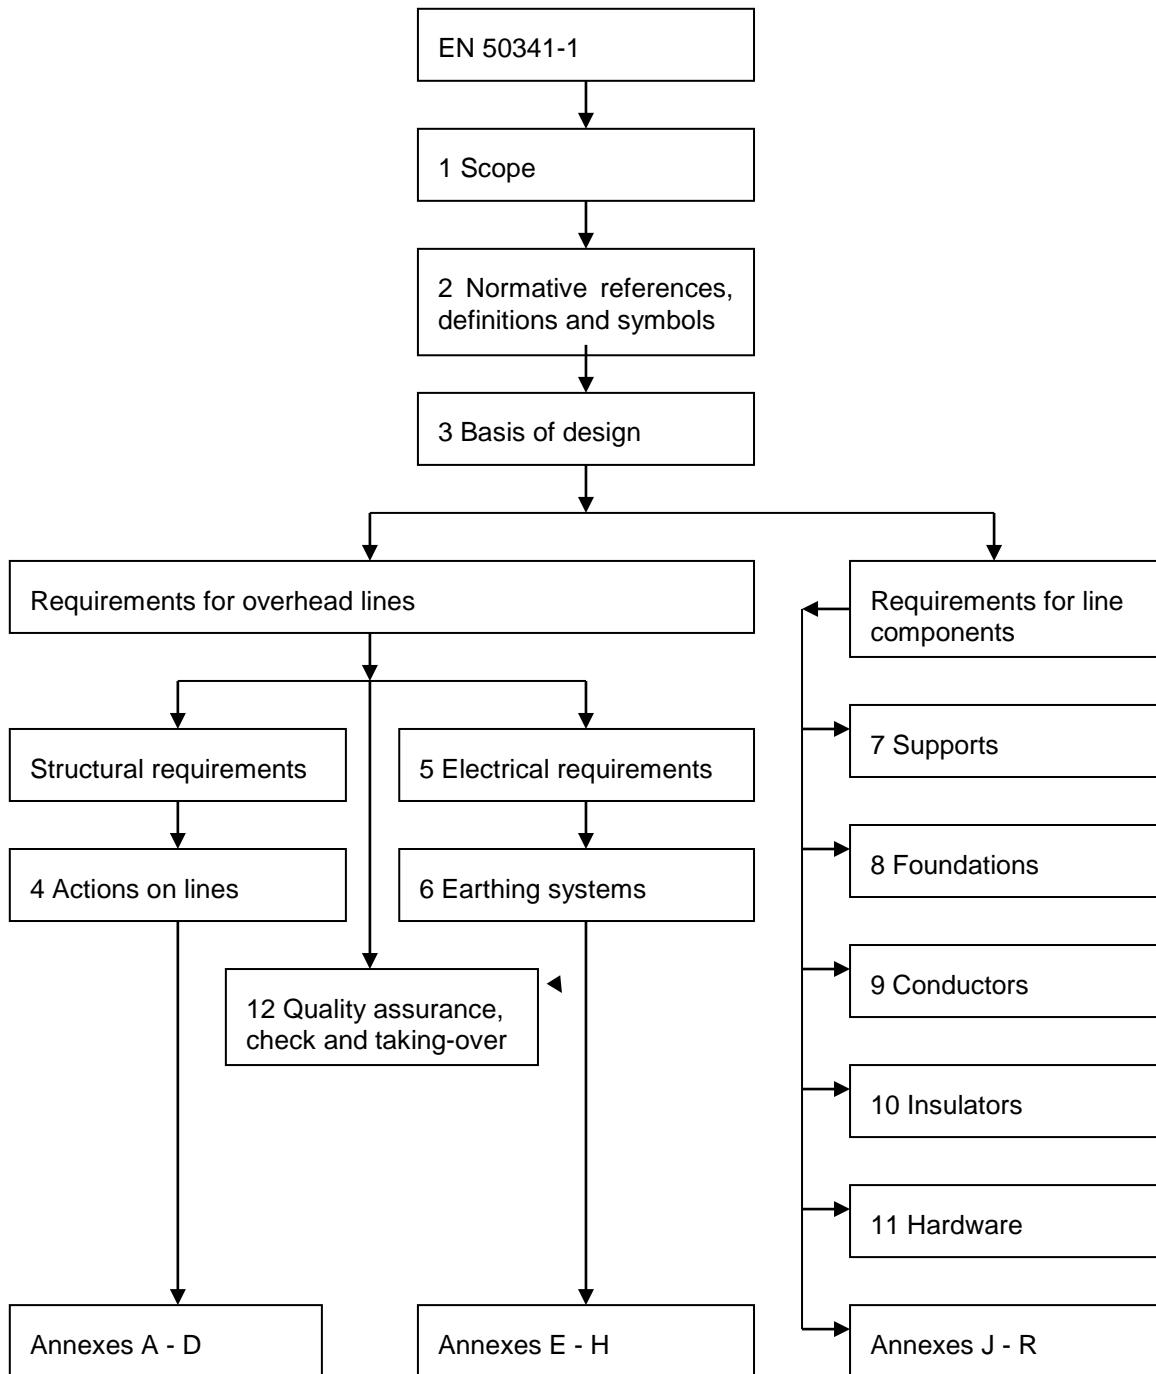

In Clause 3, the basis of design according to this standard is given.

The standard specifies in Clauses 4 to 6 the general requirements that shall be met for the structural and electrical design of overhead lines to ensure that the line is suitable for its purpose with due consideration given to safety of public, construction, operation, maintenance and environmental issues.

Clauses 7 to 11 of this standard consider the structural and electrical requirements that shall be met for the design, installation and testing of overhead line components including supports, foundations, conductors, insulator strings and hardware as determined by the relevant design parameters of the line.

Finally, Clause 12 considers the quality assurance requirements during design, manufacturing and construction.

Flowchart 1.1 summarises the structure of the European Standard EN 50341-1, its Clauses 1 to 12 and its Annexes A to R.

Flowchart 1.1 — Structure of the European Standard EN 50341-1
