## Varvtalsstyrda elektriska drivsystem – Del 9-2: Ekodesign för elektriska drivsystem med startkopplare, kraftelektronik och tillhörande mekaniska last – Indikatorer för verkningsgrad hos elektriska drivsystem och startkopplare

*Adjustable speed electrical power drive systems –*

*Part 9-2: Ecodesign for power drive systems, motor starters, power electronics and their driven applications –*

*Energy efficiency indicators for power drive systems and motor starters*

Som svensk standard gäller europastandarden EN 61800-9-2:2017. Den svenska standarden innehåller den officiella engelska språkversionen av EN 61800-9-2:2017.

### Nationellt förord

Europastandarden EN 61800-9-2:2017

består av:

- **europastandardens ikraftsättningsdokument**, utarbetat inom CENELEC
- **IEC 61800-9-2, First edition, 2017 - Adjustable speed electrical power drive systems - Part 9-2: Ecodesign for power drive systems, motor starters, power electronics and their driven applications - Energy efficiency indicators for power drive systems and motor starters**

utarbetad inom International Electrotechnical Commission, IEC.

Tidigare fastställd svensk standard SS-EN 50598-2, utgåva 1, 2015 och SS-EN 50598-2/A1, utgåva 1, 2016, gäller ej fr o m 2020-04-07.

---

ICS 29.130.01; 29.160.30; 29.200.00

---

Denna standard är fastställd av SEK Svensk Elstandard, som också kan lämna upplysningar om **sakinnehållet** i standarden.  
Postadress: Box 1284, 164 29 KISTA

### *Standarder underlättar utvecklingen och höjer elsäkerheten*

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

### *SEK är Sveriges röst i standardiseringsarbetet inom elområdet*

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

### *Stora delar av arbetet sker internationellt*

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

### *Var med och påverka!*

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

English Version

Adjustable speed electrical power drive systems -  
Part 9-2: Ecodesign for power drive systems, motor starters,  
power electronics and their driven applications - Energy  
efficiency indicators for power drive systems and motor starters  
(IEC 61800-9-2:2017)

Entraînements électriques de puissance à vitesse variable -  
Partie 9-2: Ecoconception des entraînements électriques de  
puissance, des démarreurs de moteurs, de l'électronique de  
puissance et de leurs applications entraînées - Indicateurs  
d'efficacité énergétique pour les entraînements électriques  
de puissance et les démarreurs de moteurs  
(IEC 61800-9-2:2017)

Drehzahlveränderbare elektrische Antriebe -  
Teil 9-2: Ökodesign für Antriebssysteme, Motorstarter,  
Leistungselektronik und deren angetriebene Einrichtungen -  
Indikatoren für die Energieeffizienz von Antriebssystemen  
und Motorstartern  
(IEC 61800-9-2:2017)

This European Standard was approved by CENELEC on 2017-04-07. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## **European foreword**

The text of document 22G/349/FDIS, future edition 1 of IEC 61800-9-2, prepared by SC 22G "Adjustable speed electric drive systems incorporating semiconductor power converters", of IEC/TC 22 "Power electronic systems and equipment" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN 61800-9-2:2017.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2018-01-07
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2020-04-07

This document supersedes EN 50598-2:2014.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a mandate given to CENELEC by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s).

For the relationship with EU Directive(s) see informative Annex ZZ, which is an integral part of this document.

## **Endorsement notice**

The text of the International Standard IEC 61800-9-2:2017 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

IEC 60034	NOTE	Harmonized in EN 60034 series.
IEC/TS 60034-25	NOTE	Harmonized as CLC/TS 60034-25.
IEC 60034-30	NOTE	Harmonized in EN 60034-30 series.
IEC/TS 60034-31	NOTE	Harmonized as CLC/TS 60034-31.
IEC 60146-1-1	NOTE	Harmonized as EN 60146-1-1.
IEC 60947-4-2	NOTE	Harmonized as EN 60947-4-2.
IEC 61000-3-12	NOTE	Harmonized as EN 61000-3-12.
IEC 61800-2	NOTE	Harmonized as EN 61800-2.

IEC 61800-3	NOTE	Harmonized as EN 61800-3.
IEC 61800-5-1	NOTE	Harmonized as EN 61800-5-1.
IEC 61800-9	NOTE	Harmonized in EN 61800-9 series.
IEC 61800-9-1	NOTE	Harmonized as EN 61800-9-1.

## Annex ZA (normative)

### Normative references to international publications with their corresponding European publications

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 When an International Publication has been modified by common modifications, indicated by (mod), the relevant EN/HD applies.

NOTE 2 Up-to-date information on the latest versions of the European Standards listed in this Annex is available here: [www.cenelec.eu](http://www.cenelec.eu).

<u>Publication</u>	<u>Year</u>	<u>Title</u>	<u>EN/HD</u>	<u>Year</u>

## CONTENTS

FOREWORD.....	8
INTRODUCTION.....	10
1 Scope.....	12
2 Normative references .....	13
3 Terms, definitions, symbols and abbreviated terms.....	14
3.1 Terms and definitions.....	14
3.2 Symbols and abbreviated terms .....	17
4 Reference PDS (RPDS), reference CDM (RCDM) and reference motor (RM).....	24
4.1 General.....	24
4.2 Reference operating points of the RPDS, RCDM, RM and associated losses .....	25
4.3 Combining PDS losses with the driven equipment – Workflow for the semi-analytical model (SAM) .....	27
4.4 IE classes of line-fed motors .....	29
4.5 IE classes of converter-fed motors .....	29
4.6 IE Classes of frequency converters (complete drive modules, CDM) .....	29
4.7 IES Classes of a PDS .....	29
4.8 Consistency of IE and IES classes .....	30
4.9 Determination of the IES class of a PDS by application of "reference" and "test" devices and guidance for the manufacturers .....	30
5 Mathematical model of CDM, motor and PDS .....	32
5.1 General.....	32
5.2 CDM losses .....	32
5.2.1 General procedure and definition of the CDM and the test load .....	32
5.2.2 Output inverter losses.....	34
5.2.3 Input converter losses .....	37
5.2.4 Input choke losses.....	38
5.2.5 DC link losses.....	39
5.2.6 Current conductor losses .....	39
5.2.7 Control and standby losses.....	40
5.2.8 Cooling loss factor .....	40
5.2.9 Other CDM losses .....	40
5.2.10 Overall CDM losses .....	40
5.3 Motor losses .....	41
5.3.1 General .....	41
5.3.2 Additional harmonic losses of three-phase asynchronous motors fed by a CDM .....	42
5.3.3 Reference motor (RM) data .....	42
5.4 Reference PDS (RPDS) .....	43
5.4.1 Reference PDS losses.....	43
5.4.2 PDS losses at different switching frequencies.....	44
5.5 PDS losses for regenerative operation .....	45
5.6 Losses of motor starters .....	45
6 Limits of IE and IES classes .....	46
6.1 General.....	46
6.2 CDM .....	46
6.3 Motor .....	48
6.4 PDS.....	48

7	Loss determination .....	51
7.1	General.....	51
7.2	Type testing of CDM for IE classification.....	51
7.3	Type testing of PDS for IES classification .....	52
7.4	Determination procedures for CDM and PDS losses in part load operation.....	52
7.5	CDM loss calculation .....	53
7.6	PDS loss calculation .....	53
7.7	Input-output measurement method.....	53
7.7.1	Input-output measurement of CDM losses .....	53
7.7.2	Input-output measurement of PDS losses .....	54
7.7.3	Requirements of input-output measurement methods .....	54
7.8	Calorimetric measurement of CDM losses.....	57
7.9	Testing conditions for CDM testing.....	58
7.10	Testing conditions for PDS testing .....	59
7.11	Flowcharts for test procedures .....	59
8	Requirements for the user's documentation .....	62
8.1	General.....	62
8.2	Information for selection .....	62
8.3	Information for determination of energy efficiency classification .....	63
8.4	Information on the determination of additional energy losses and part load conditions .....	63
8.4.1	General .....	63
8.4.2	Losses in part load conditions.....	63
8.4.3	Losses of auxiliaries and options .....	63
8.4.4	Losses in stand-by mode .....	64
8.4.5	Losses in regenerative mode .....	64
Annex A (normative)	Losses of RCDM, RM and RPDS.....	65
A.1	Relative loss tables.....	65
Annex B (informative)	Description of the elements of an extended product using PDS with regard to their impact on losses.....	69
B.1	General.....	69
B.2	Losses in the mains cabling and feeding section.....	69
B.3	Input filter .....	70
B.3.1	High frequency EMI filter .....	70
B.3.2	Low frequency line harmonics filter.....	71
B.4	Input converter.....	71
B.4.1	General .....	71
B.4.2	Diode rectifier.....	72
B.4.3	Active infeed converter .....	72
B.4.4	Power factor of the input converter .....	74
B.5	DC link.....	75
B.6	Output inverter.....	76
B.7	Output filter and motor cables .....	77
B.7.1	General .....	77

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

**ADJUSTABLE SPEED ELECTRICAL POWER DRIVE SYSTEMS –****Part 9-2: Ecodesign for power drive systems,  
motor starters, power electronics and their driven applications –  
Energy efficiency indicators for power drive systems and motor starters**

## FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61800-9-2 has been prepared by subcommittee 22G: Adjustable speed electric drive systems incorporating semiconductor power converters, of IEC technical committee 22: Power electronic systems and equipment.

The text of this document is based on the following documents:

FDIS	Report on voting
22G/349/FDIS	22G/352/RVD

Full information on the voting for the approval of this document can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts in the IEC 61800 series, published under the general title *Adjustable speed electrical power drive systems*, can be found on the IEC website.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

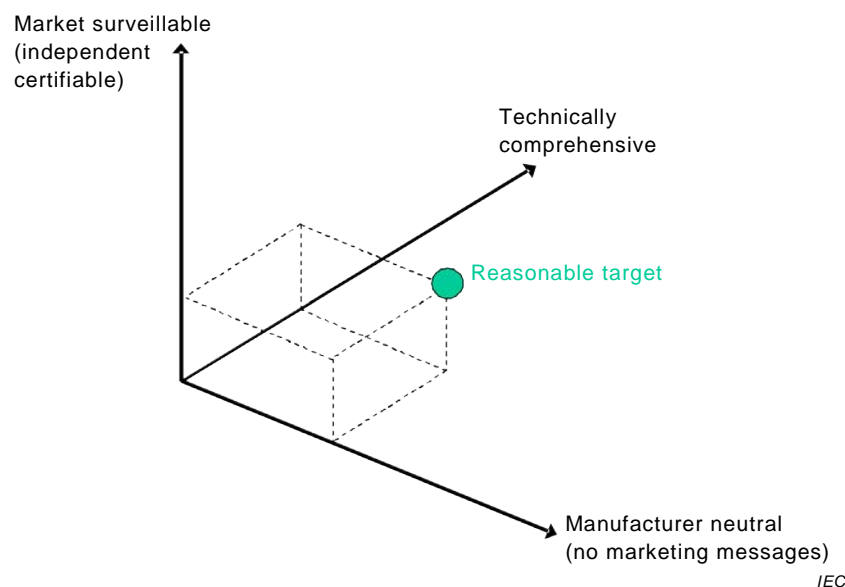

This part of IEC 61800 has been developed to allow evaluation of power losses of CDMs (complete drive modules) and PDSs (power drive systems).

The requirements for measuring energy efficiency of motors with non-sinusoidal supply are under the responsibility of IEC/TC 2 and will be published under the IEC 60034 series.

IEC SC 22G includes the standardization task force for dealing with this topic. It has close collaboration with several other technical committees (for example, IEC TC 2, IEC SC 121A).

IEC SC 22G maintains responsibility for all relevant aspects in the field of energy efficiency and ecodesign requirements for power electronics, switchgear, control gear and power drive systems and their industrial applications.

The core requirements of energy efficiency standardization are illustrated in Figure 1. The work has been agreed to provide the reasonable target as a best compromise.

**Figure 1 – Illustration of core requirements of energy efficiency standardization**

IEC 61800 (all parts) does not deal with mechanical engineering components.

NOTE Geared motors (motors with directly adapted gearboxes) are treated like power drive systems (converter plus motor). See IEC 60034-30-1 for classification of the losses of a geared motor. The efficiency classes of gearboxes as individual components are under consideration.

IEC 61800-9-2 is a subpart of the IEC 61800 series, which has the following structure:

- *Part 1: General requirements – Rating specifications for low voltage adjustable speed DC power drive systems*
- *Part 2: General requirements – Rating specifications for low voltage adjustable speed AC power drive systems*
- *Part 3: EMC requirements and specific test methods*
- *Part 4: General requirements – Rating specifications for AC power drive systems above 1 000 V AC and not exceeding 35 kV*
- *Part 5: Safety requirements*

- *Part 6: Guide for determination of types of load duty and corresponding current ratings*
- *Part 7: Generic interface and use of profiles for power drive systems*
- *Part 8: Specification of voltage on the power interface*
- *Part 9: Ecodesign for power drive systems, motor starters, power electronics and their driven applications*

Each part is further subdivided into several subparts, published either as International Standards or as Technical Specifications or Technical Reports, some of which have already been published. Other will be published with the part number followed by a dash and a second number identifying the subdivision (example: IEC 61800-9-2).

It considers basic requirements from the EN 50598-2 CENELEC standard published on 2014-12-19 and considers also the following key points in cooperation with relevant technical committees.

It has been developed in close collaboration with other technical committees (IEC TC 2, IEC SC 121A) and with a customer's stakeholder committee CEN/TC 197 in order to provide a comprehensive standard for energy efficiency and ecodesign requirements.

Key points:

- Requirements for energy-efficient design of electric drive systems in accordance with the driven load
- Requirements and IE-classification of complete drive modules (CDM)
- Requirements and IES-classification of power drive systems (PDS)
- Determination of PDS losses and requirements for the link to the driven equipment for the determination of energy efficiency classification/evaluation of the extended product
- Requirements for an environmentally conscious system design and environmental declaration of a motor system

## ADJUSTABLE SPEED ELECTRICAL POWER DRIVE SYSTEMS –

### Part 9-2: Ecodesign for power drive systems, motor starters, power electronics and their driven applications – Energy efficiency indicators for power drive systems and motor starters

#### 1 Scope

This part of IEC 61800 specifies energy efficiency indicators of power electronics (complete drive modules, CDM), power drive systems (PDS) and motor starters, all used for motor driven equipment.

It specifies the methodology for the determination of losses of the complete drive module (CDM), the power drive system (PDS) and the motor system.

It defines IE and IES-classes, their limit values and provides test procedures for the classification of the overall losses of the motor system.

Furthermore, this document proposes a methodology for the implementation of the best energy efficiency solution of drive systems. This depends on the architecture of the motor driven system, on the speed/load profile and on the operating points over time of the driven equipment.

The methodology of the extended product approach and the semi analytical models are defined in IEC 61800-9-1.

The structure of this document is as follows:

- the losses of standardized reference PDS (RPDS), standardized reference CDM (RCDM) and the mathematical model for their calculation are given and classified;
- the reference motor (RM) and the reference CDM (RCDM) are defined and can be used to determine the efficiency class of a motor system when one of its constituents is unknown;
- the requirements for the determination of the losses of a real PDS and a real CDM are given and compared to the reference RPDS and RCDM;
- the requirements for type testing and user documentation are given;
- some exemplary losses of an overall system are illustrated in annexes;
- information about system and drive topologies are given in annexes.

Specific data for power losses of RCDM, RM, RPDS and IE/IES-classes are given for low voltage (100 V up to and equal to 1 000 V), single axis AC/AC power drive systems with three-phase motors. Geared motors are treated as standard motors when motor and gearbox can be separated.

All provided reference data is derived from PDS with induction motors. It may be used for all types of PDS with other types of motors as well.

The application of this document to the following equipment may be technically possible but is not mandatory:

- High voltage CDM and PDS with a rated voltage above 1 000 V AC;
- Low voltage CDM and PDS with a rated voltage below 100 V AC;

- High power PDS above a rated power of 1 000 kW;
- High power CDM above a rated apparent output power of 1 209 kVA;
- Low power PDS below a rated power of 0,12 kW;
- Low power CDM below a rated power of 0,278 kVA;
- CDMs other than those converting electrical AC power into one single AC output;
- PDSs other than those converting electrical AC power into one single mechanical rotating shaft;
- PDSs and CDMs that are able to regenerate energy back into the AC power supply;
- PDSs and CDMs having an input current with a THC (according to the definition in IEC 61000-3-12) of less than 10 %;
- PDS with geared motors where motor and gearbox cannot be separated, for example because of a common housing,
- Servo PDS (consisting of frequency converter, motor and position feedback sensor);
- PDSs that are not put on the market as one single product.

NOTE IEC 61800-9 (all parts) does not cover energy efficiency classification of driven equipment but provides input for the assessment according to the extended product approach.
