# Standarder får världen att fungera

*SIS (Swedish Standards Institute) är en fristående ideell förening med medlemmar från både privat och offentlig sektor. Vi är en del av det europeiska och globala nätverk som utarbetar internationella standarder. Standarder är dokumenterad kunskap utvecklad av framstående aktörer inom industri, näringsliv och samhälle och befrämjar handel över gränser, bidrar till att processer och produkter blir säkrare samt effektiviserar din verksamhet.*

## Delta och påverka

Som medlem i SIS har du möjlighet att påverka framtida standarder inom ditt område på nationell, europeisk och global nivå. Du får samtidigt tillgång till tidig information om utvecklingen inom din bransch.

## Ta del av det färdiga arbetet

Vi erbjuder våra kunder allt som rör standarder och deras tillämpning. Hos oss kan du köpa alla publikationer du behöver – allt från enskilda standarder, tekniska rapporter och standardpaket till handböcker och onlinetjänster. Genom vår webbtjänst e-nav får du tillgång till ett lättnavigerat bibliotek där alla standarder som är aktuella för ditt företag finns tillgängliga. Standarder och handböcker är källor till kunskap. Vi säljer dem.

## Utveckla din kompetens och lyckas bättre i ditt arbete

Hos SIS kan du gå öppna eller företagsinterna utbildningar kring innehåll och tillämpning av standarder. Genom vår närhet till den internationella utvecklingen och ISO får du rätt kunskap i rätt tid, direkt från källan. Med vår kunskap om standarders möjligheter hjälper vi våra kunder att skapa verklig nytta och lönsamhet i sina verksamheter.

**Vill du veta mer om SIS eller hur standarder kan effektivisera din verksamhet är du välkommen in på [www.sis.se](http://www.sis.se) eller ta kontakt med oss på tel 08-555 523 00.**

# Standards make the world go round

*SIS (Swedish Standards Institute) is an independent non-profit organisation with members from both the private and public sectors. We are part of the European and global network that draws up international standards. Standards consist of documented knowledge developed by prominent actors within the industry, business world and society. They promote cross-border trade, they help to make processes and products safer and they streamline your organisation.*

## Take part and have influence

As a member of SIS you will have the possibility to participate in standardization activities on national, European and global level. The membership in SIS will give you the opportunity to influence future standards and gain access to early stage information about developments within your field.

## Get to know the finished work

We offer our customers everything in connection with standards and their application. You can purchase all the publications you need from us - everything from individual standards, technical reports and standard packages through to manuals and online services. Our web service e-nav gives you access to an easy-to-navigate library where all standards that are relevant to your company are available. Standards and manuals are sources of knowledge. We sell them.

## Increase understanding and improve perception

With SIS you can undergo either shared or in-house training in the content and application of standards. Thanks to our proximity to international development and ISO you receive the right knowledge at the right time, direct from the source. With our knowledge about the potential of standards, we assist our customers in creating tangible benefit and profitability in their organisations.

**If you want to know more about SIS, or how standards can streamline your organisation, please visit [www.sis.se](http://www.sis.se) or contact us on phone +46 (0)8-555 523 00**

Den internationella standarden ISO 26262-10:2018 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 26262-10:2018.

Denna standard ersätter SS-ISO 26262-10:2012, utgåva 1

The International Standard ISO 26262-10:2018 has the status of a Swedish Standard. This document contains the official English version of ISO 26262-10:2018.

This standard supersedes the SS-ISO 26262-10:2012, edition 1

<b>Foreword</b> .....	<b>vii</b>
<b>Introduction</b> .....	<b>ix</b>
<b>1 Scope</b> .....	<b>11</b>
<b>2 Normative references</b> .....	<b>11</b>
<b>3 Terms and definitions</b> .....	<b>12</b>
<b>4 Key concepts of ISO 26262</b> .....	<b>12</b>
4.1 Functional safety for automotive systems (relationship with IEC 61508[1]).....	12
4.2 Item, system, element, component, hardware part and software unit.....	14
4.3 Relationship between faults, errors and failures.....	15
4.3.1 Progression of faults to errors to failures.....	15
4.4 FTTI and emergency operation tolerant time interval.....	16
4.4.1 Introduction .....	16
4.4.2 Timing model — Example control system .....	17
<b>5 Selected topics regarding safety management</b> .....	<b>19</b>
5.1 Work product.....	19
5.2 Confirmation measures.....	19
5.2.1 General.....	19
5.2.2 Functional safety assessment .....	20
5.3 Understanding of safety cases.....	22
5.3.1 Interpretation of safety cases .....	22
5.3.2 Safety case development lifecycle.....	23
<b>6 Concept phase and system development</b> .....	<b>23</b>
6.1 General .....	23
6.2 Example of hazard analysis and risk assessment .....	23
6.2.1 General.....	23
6.2.2 HARA example 1 .....	23
6.2.3 HARA example 2.....	24
6.3 An observation regarding controllability classification.....	24
6.4 External measures.....	25
6.4.1 General.....	25
6.4.2 Example of vehicle dependent external measures 1.....	25
6.4.3 Example of vehicle dependent external measures 2.....	25
6.5 Example of combining safety goals.....	26
6.5.1 Introduction .....	26
6.5.2 General.....	26
6.5.3 Function definition.....	26
6.5.4 Safety goals applied to the same hazard in different situations .....	26
<b>7 Safety process requirement structure — Flow and sequence of the safety requirements</b> .....	<b>27</b>
<b>8 Concerning hardware development</b> .....	<b>29</b>
8.1 The classification of random hardware faults.....	29
8.1.1 General.....	29
8.1.2 Single-point fault.....	29
8.1.3 Residual fault .....	30
8.1.4 Detected dual-point fault.....	30
8.1.5 Perceived dual-point fault .....	30
8.1.6 Latent dual-point fault.....	31
8.1.7 Safe fault.....	31
8.1.8 Flow diagram for fault classification and fault class contribution calculation.....	31
8.1.9 How to consider the failure rate of multiple-point faults related to software-based safety mechanisms addressing random hardware failures .....	35

8.2	Example of residual failure rate and local single-point fault metric evaluation.....	35
8.2.1	General.....	35
8.2.2	Technical safety requirement for sensor A_Master.....	35
8.2.3	Description of the safety mechanism.....	36
8.2.4	Evaluation of example 1 described in Figure 12.....	39
8.3	Further explanation concerning hardware.....	47
8.3.1	How to deal with microcontrollers in the context of an ISO 26262 series of standards application.....	47
8.3.2	Safety analysis methods.....	47
8.4	PMHF units — Average probability per hour.....	54
<b>9</b>	<b>Safety Element out of Context.....</b>	<b>57</b>
9.1	Safety Element out of Context development.....	57
9.2	Use cases.....	58
9.2.1	General.....	58
9.2.2	Development of a system as a Safety Element out of Context example.....	59
9.2.3	Development of a hardware component as a Safety Element out of Context example.....	61
9.2.4	Development of a software component as a Safety Element out of Context example.....	63
<b>10</b>	<b>An example of proven in use argument.....</b>	<b>65</b>
10.1	General.....	65
10.2	Item definition and definition of the proven in use candidate.....	66
10.3	Change analysis.....	66
10.4	Target values for proven in use.....	66
<b>11</b>	<b>Concerning ASIL decomposition.....</b>	<b>67</b>
11.1	Objective of ASIL decomposition.....	67
11.2	Description of ASIL decomposition.....	67
11.3	An example of ASIL decomposition.....	67
11.3.1	General.....	67
11.3.2	Item definition.....	67
11.3.3	Hazard analysis and risk assessment.....	68
11.3.4	Associated safety goal.....	68
11.3.5	System architectural design.....	68
11.3.6	Functional safety concept.....	69
<b>12</b>	<b>Guidance for system development with safety-related availability requirements.....</b>	<b>70</b>
12.1	Introduction.....	70
12.2	Notes on concept phase when specifying fault tolerance.....	71
12.2.1	General.....	71
12.2.2	Vehicle operating states in which the availability of a functionality is safety-related.....	71
12.2.3	Prevention of hazardous events after a fault.....	71
12.2.4	Operation after fault reaction.....	72
12.2.5	Fault tolerant item example.....	73
12.2.6	ASIL decomposition of fault tolerant items.....	78
12.3	Availability considerations during hardware design phase.....	79
12.3.1	Random hardware fault quantitative analysis.....	79
12.4	Software development phase.....	81
12.4.1	Software fault avoidance and tolerance.....	81
12.4.2	Software fault avoidance.....	81
12.4.3	Software fault tolerance.....	81
<b>13</b>	<b>Remark on “Confidence in the use of software tools”.....</b>	<b>82</b>
<b>14</b>	<b>Guidance on safety-related special characteristics.....</b>	<b>83</b>
14.1	General.....	83
14.2	Identification of safety-related special characteristics.....	84
14.3	Specification of the control measures of safety-related special characteristics.....	84

14.4	Monitoring of the safety-related special characteristics .....	85

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles* Subcommittee SC 32, *Electrical and electronic components and general system aspects*.

This edition of ISO 26262 series of standards cancels and replaces the edition ISO 26262:2011 series of standards, which has been technically revised and includes the following main changes:

- requirements for trucks, buses, trailers and semi-trailers;
- extension of the vocabulary;
- more detailed objectives;
- objective oriented confirmation measures;
- management of safety anomalies;
- references to cyber security;
- updated target values for hardware architecture metrics;
- guidance on model based development and software safety analysis;
- evaluation of hardware elements;
- additional guidance on dependent failure analysis;
- guidance on fault tolerance, safety related special characteristics and software tools;
- guidance for semiconductors;
- requirements for motorcycles; and
- general restructuring of all parts for improved clarity.

NOTE The first edition of this document was published in 2012, therefore this document cancels and replaces ISO 26262-10:2012.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

A list of all parts in the ISO 26262 series can be found on the ISO website.

## Introduction

The ISO 26262 series of standards is the adaptation of IEC 61508 series of standards to address the sector specific needs of electrical and/or electronic (E/E) systems within road vehicles.

This adaptation applies to all activities during the safety lifecycle of safety-related systems comprised of electrical, electronic and software components.

Safety is one of the key issues in the development of road vehicles. Development and integration of automotive functionalities strengthen the need for functional safety and the need to provide evidence that functional safety objectives are satisfied.

With the trend of increasing technological complexity, software content and mechatronic implementation, there are increasing risks from systematic failures and random hardware failures, these being considered within the scope of functional safety. ISO 26262 series of standards includes guidance to mitigate these risks by providing appropriate requirements and processes.

To achieve functional safety, the ISO 26262 series of standards:

- a) provides a reference for the automotive safety lifecycle and supports the tailoring of the activities to be performed during the lifecycle phases, i.e., development, production, operation, service and decommissioning;
- b) provides an automotive-specific risk-based approach to determine integrity levels [Automotive Safety Integrity Levels (ASILs)];
- c) uses ASILs to specify which of the requirements of ISO 26262 are applicable to avoid unreasonable residual risk;
- d) provides requirements for functional safety management, design, implementation, verification, validation and confirmation measures; and
- e) provides requirements for relations between customers and suppliers.

The ISO 26262 series of standards is concerned with functional safety of E/E systems that is achieved through safety measures including safety mechanisms. It also provides a framework within which safety-related systems based on other technologies (e.g. mechanical, hydraulic and pneumatic) can be considered.

The achievement of functional safety is influenced by the development process (including such activities as requirements specification, design, implementation, integration, verification, validation and configuration), the production and service processes and the management processes.

Safety is intertwined with common function-oriented and quality-oriented activities and work products. The ISO 26262 series of standards addresses the safety-related aspects of these activities and work products.

[Figure 1](#) shows the overall structure of the ISO 26262 series of standards. The ISO 26262 series of standards is based upon a V-model as a reference process model for the different phases of product development. Within the figure:

- the shaded “V”s represent the interconnection among ISO 26262-3, ISO 26262-4, ISO 26262-5, ISO 26262-6 and ISO 26262-7;
- for motorcycles:
  - ISO 26262-12:2018, Clause 8 supports ISO 26262-3;
  - ISO 26262-12:2018, Clauses 9 and 10 support ISO 26262-4;
- the specific clauses are indicated in the following manner: “m-n”, where “m” represents the number of the particular part and “n” indicates the number of the clause within that part.

EXAMPLE “2-6” represents ISO 26262-2:2018, Clause 6.

Figure 1 — Overview of the ISO 26262 series of standards

# Road vehicles — Functional safety —

## Part 10: Guidelines on ISO 26262

### 1 Scope

This document is intended to be applied to safety-related systems that include one or more electrical and/or electronic (E/E) systems and that are installed in series production road vehicles, excluding mopeds. This document does not address unique E/E systems in special vehicles such as E/E systems designed for drivers with disabilities.

NOTE Other dedicated application-specific safety standards exist and can complement the ISO 26262 series of standards or vice versa.

Systems and their components released for production, or systems and their components already under development prior to the publication date of this document, are exempted from the scope of this edition. This document addresses alterations to existing systems and their components released for production prior to the publication of this document by tailoring the safety lifecycle depending on the alteration. This document addresses integration of existing systems not developed according to this document and systems developed according to this document by tailoring the safety lifecycle.

This document addresses possible hazards caused by malfunctioning behaviour of safety-related E/E systems, including interaction of these systems. It does not address hazards related to electric shock, fire, smoke, heat, radiation, toxicity, flammability, reactivity, corrosion, release of energy and similar hazards, unless directly caused by malfunctioning behaviour of safety-related E/E systems.

This document describes a framework for functional safety to assist the development of safety-related E/E systems. This framework is intended to be used to integrate functional safety activities into a company-specific development framework. Some requirements have a clear technical focus to implement functional safety into a product; others address the development process and can therefore be seen as process requirements in order to demonstrate the capability of an organization with respect to functional safety.

This document does not address the nominal performance of E/E systems.

This document provides an overview of the ISO 26262 series of standards, as well as giving additional explanations, and is intended to enhance the understanding of the other parts of the ISO 26262 series of standards. It has an informative character only and describes the general concepts of the ISO 26262 series of standards in order to facilitate comprehension. The explanation expands from general concepts to specific contents.

In the case of inconsistencies between this document and another part of the ISO 26262 series of standards, the requirements, recommendations and information specified in the other part of the ISO 26262 series of standards apply.

### 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
