CONTENTS

FOREWORD.....	10
INTRODUCTION.....	12
1 Scope.....	13
2 Normative references	13
3 Terms and definitions	15
4 Symbols and abbreviated terms.....	23
4.1 Symbols and units.....	23
4.2 Abbreviated terms.....	26
5 Principal elements	27
5.1 General.....	27
5.2 Design methods	27
5.3 Safety classes	27
5.4 Quality assurance	27
5.5 Wind turbine markings	27
6 External conditions	28
6.1 General.....	28
6.2 Wind turbine classes.....	28
6.3 Wind conditions	30
6.3.1 General	30
6.3.2 Normal wind conditions.....	31
6.3.3 Extreme wind conditions	33
6.4 Other environmental conditions.....	38
6.4.1 General	38
6.4.2 Normal other environmental conditions	39
6.4.3 Extreme other environmental conditions	39
6.5 Electrical power network conditions	39
7 Structural design	40
7.1 General.....	40
7.2 Design methodology	40
7.3 Loads.....	40
7.3.1 General	40
7.3.2 Gravitational and inertial loads	41
7.3.3 Aerodynamic loads	41
7.3.4 Actuation loads.....	41
7.3.5 Other loads.....	41
7.4 Design situations and load cases	41
7.4.1 General	41
7.4.2 Power production (DLC 1.1 to 1.5).....	44
7.4.3 Power production plus occurrence of fault or loss of electrical network connection (DLC 2.1 to 2.5).....	45
7.4.4 Start-up (DLC 3.1 to 3.3)	47
7.4.5 Normal shutdown (DLC 4.1 to 4.2).....	47
7.4.6 Emergency stop (DLC 5.1).....	48
7.4.7 Parked (standstill or idling) (DLC 6.1 to 6.4)	48
7.4.8 Parked plus fault conditions (DLC 7.1).....	49
7.4.9 Transport, assembly, maintenance and repair (DLC 8.1 and 8.2)	49

7.5	Load calculations	49
7.6	Ultimate limit state analysis.....	50
7.6.1	Method	50
7.6.2	Ultimate strength analysis.....	53
7.6.3	Fatigue failure	56
7.6.4	Stability	57
7.6.5	Critical deflection analysis	57
7.6.6	Special partial safety factors.....	58
8	Control system	58
8.1	General.....	58
8.2	Control functions.....	58
8.3	Protection functions	59
8.4	Control system failure analysis	59
8.4.1	General	59
8.4.2	Independence and common-cause failures	60
8.4.3	Fault exclusions.....	60
8.4.4	Failure mode return periods.....	60
8.4.5	Systematic failures	60
8.5	Manual operation	60
8.6	Emergency stop button function	60
8.7	Manual, automatic, and remote restart	61
8.8	Braking system	62
9	Mechanical systems	62
9.1	General.....	62
9.2	Errors of fitting.....	63
9.3	Hydraulic or pneumatic systems.....	63
9.4	Main gearbox	63
9.5	Yaw system	63
9.6	Pitch system	64
9.7	Protection function mechanical brakes	64
9.8	Rolling element bearings.....	64
9.8.1	General	64
9.8.2	Main shaft bearings	64
9.8.3	Generator bearings.....	64
9.8.4	Pitch and yaw bearings.....	65
10	Electrical system	65
10.1	General.....	65
10.2	General requirements for the electrical system	65
10.3	Internal environmental conditions.....	65
10.4	Protective devices.....	67
10.5	Disconnection from supply sources	67
10.6	Earth system.....	67
10.7	Lightning protection	67
10.8	Electrical cables.....	68
10.9	Self-excitation	68
10.10	Protection against lightning electromagnetic impulse	68
10.11	Power quality	68
10.12	Electromagnetic compatibility.....	69
10.13	Power electronic converter systems and equipment	69

10.14	Twist/drip loop	69
10.15	Slip rings	69
10.16	Vertical power transmission conductors and components	70
10.17	Motor drives and converters	70
10.18	Electrical machines	71
10.19	Power transformers	71
10.20	Low voltage switchgear and controlgear	71
10.21	High voltage switchgear	71
10.22	Hubs	72
11	Assessment of a wind turbine for site-specific conditions	72
11.1	General	72
11.2	Assessment of the topographical complexity of the site and its effect on turbulence	72
11.2.1	Assessment of the topographical complexity	72
11.2.2	Assessment of turbulence structure at the site	75
11.3	Wind conditions required for assessment	76
11.3.1	General	76
11.3.2	Wind condition parameters	76
11.3.3	Measurement setup	77
11.3.4	Data evaluation	78
11.4	Assessment of wake effects from neighbouring wind turbines	78
11.5	Assessment of other environmental conditions	78
11.6	Assessment of earthquake conditions	79
11.7	Assessment of electrical network conditions	80
11.8	Assessment of soil conditions	80
11.9	Assessment of structural integrity by reference to wind data	80
11.9.1	General	80
11.9.2	Assessment of the fatigue load suitability by reference to wind data	80
11.9.3	Assessment of the ultimate load suitability by reference to wind data	82
11.10	Assessment of structural integrity by load calculations with reference to site- specific conditions	82
12	Assembly, installation and erection	83
12.1	General	83
12.2	Planning	84
12.3	Installation conditions	84
12.4	Site access	84
12.5	Environmental conditions	84
12.6	Documentation	84
12.7	Receiving, handling and storage	85
12.8	Foundation/anchor systems	85
12.9	Assembly of wind turbine	85
12.10	Erection of wind turbine	85
12.11	Fasteners and attachments	85
12.12	Cranes, hoists and lifting equipment	85
13	Commissioning, operation and maintenance	86
13.1	General	86
13.2	Design requirements for safe operation, inspection and maintenance	86
13.3	Instructions concerning commissioning	87
13.3.1	General	87

13.3.2	Energization	87
13.3.3	Commissioning tests	87
13.3.4	Records	87
13.3.5	Post commissioning activities	87
13.4	Operator's instruction manual	87
13.4.1	General	87
13.4.2	Instructions for operations and maintenance records	88
13.4.3	Instructions for unscheduled automatic shutdown	88
13.4.4	Instructions for diminished reliability	88
13.4.5	Work procedures plan	88
13.4.6	Emergency procedures plan	89
13.5	Maintenance manual	89
14	Cold climate	90
14.1	General	90
14.2	Low temperature and icing climate	90
14.3	External conditions for cold climate	90
14.3.1	General	90
14.3.2	Wind turbine class for cold climate	90
14.4	Structural design	91
14.5	Design situations and load cases	91
14.5.1	General	91
14.5.2	Load calculations	91
14.5.3	Selection of suitable materials	91
14.6	Control systems	92
14.7	Mechanical systems	92
14.8	Electrical systems	92
Annex A	(normative) Design parameters for external conditions	93
A.1	Design parameters for describing wind turbine class S	93
A.1.1	General	93
A.1.2	Machine parameters	93
A.1.3	Wind conditions	93
A.1.4	Electrical network conditions	93
A.1.5	Other environmental conditions (where taken into account)	94
A.2	Additional design parameters for describing cold climate wind turbine class S (CC-S)	94
Annex B	(informative) Design load cases for special class S wind turbine design or site suitability assessment	96
B.1	General	96
B.2	Power production (DLC 1.1 to 1.9)	96
Annex C	(informative) Turbulence models	100
C.1	General	100
C.2	Mann [3] uniform shear turbulence model	100
C.3	Kaimal [1] spectrum and exponential coherence model	103
C.4	Reference documents	105
Annex D	(informative) Assessment of earthquake loading	106
D.1	General	106
D.2	Design response spectrum	106
D.3	Structure model	107
D.4	Seismic load evaluation	108

D.5	Additional load	109
D.6	Reference documents	110
Annex E (informative)	Wake and wind farm turbulence	111
E.1	Added wake turbulence method	111
E.2	Dynamic wake meandering model.....	113

INTERNATIONAL ELECTROTECHNICAL COMMISSION

WIND ENERGY GENERATION SYSTEMS –

Part 1: Design requirements

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as “IEC Publication(s)”). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61400-1 has been prepared by IEC technical committee 88: Wind energy generation systems.

This fourth edition cancels and replaces the third edition published in 2005 and Amendment 1:2010. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) general update and clarification of references and requirements;
- b) extension of wind turbine classes to allow for tropical cyclones and high turbulence;
- c) Weibull distribution of turbulence standard deviation for normal turbulence model (NTM);
- d) updated design load cases (DLCs), in particular DLC 2.1 and 2.2;
- e) revision of partial safety factor specifications;
- f) major revision of Clauses 8, 10 and 11;

- g) introduction of cold climate requirements, Clause 14;
- h) new Annex B on design load cases for site-specific or special class S wind turbine design or site suitability assessment;
- i) new Annex J on prediction of the extreme wind speed of tropical cyclones by using Monte Carlo simulation method;
- j) new Annex K on calibration of structural material safety factors and structural design assisted by testing;
- k) new Annex L on assessment and effects of icing climate;
- l) new Annex M on medium wind turbines.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
88/696/FDIS	88/701/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 61400 series, published under the general title *Wind energy generation systems*, can be found on the IEC website.

Future standards in this series will carry the new general title as cited above. Titles of existing standards in this series will be updated at the time of the next edition.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This part of IEC 61400 outlines minimum design requirements for wind turbines and is not intended for use as a complete design specification or instruction manual.

Any of the requirements of this document may be altered if it can be suitably demonstrated that the safety of the system is not compromised. This provision, however, does not apply to the classification and the associated definitions of external conditions in Clause 6. Compliance with this document does not relieve any person, organization, or corporation from the responsibility of observing other applicable regulations.

This document is not intended to give requirements for wind turbines installed offshore, in particular for the support structure. For offshore installations, reference is made to the IEC 61400-3 series.

WIND ENERGY GENERATION SYSTEMS –

Part 1: Design requirements

1 Scope

This part of IEC 61400 specifies essential design requirements to ensure the structural integrity of wind turbines. Its purpose is to provide an appropriate level of protection against damage from all hazards during the planned lifetime.

This document is concerned with all subsystems of wind turbines such as control and protection functions, internal electrical systems, mechanical systems and support structures.

This document applies to wind turbines of all sizes. For small wind turbines, IEC 61400-2 can be applied. IEC 61400-3-1 provides additional requirements to offshore wind turbine installations.

This document is intended to be used together with the appropriate IEC and ISO standards mentioned in Clause 2.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies.
