## CONTENTS

FOREWORD.....	8
INTRODUCTION.....	10
1 Scope.....	11
1.1 General.....	11
1.2 Specifications .....	11
1.3 Procedures .....	11
1.4 Applicability .....	11
1.5 Conformance .....	11
2 Normative references .....	12
3 Terms, definitions, symbols, abbreviations and conventions .....	12
3.1 Reference model terms and definitions .....	12
3.2 Service convention terms and definitions .....	13
3.3 Common terms and definitions .....	14
3.4 Additional Type 12 definitions .....	14
3.5 Common symbols and abbreviations .....	17
3.6 Additional Type 12 symbols and abbreviations .....	18
3.7 Conventions.....	19
3.7.1 General concept .....	19
3.7.2 Abstract syntax conventions .....	19
3.7.3 Convention for the encoding of reserved bits and octets .....	21
3.7.4 Conventions for the common coding s of specific field octets .....	21
3.7.5 State machine conventions .....	22
4 Overview of the DL-protocol .....	24
4.1 Operating principle.....	24
4.2 Topology.....	24
4.3 Frame processing principles .....	24
4.4 Data-link layer overview .....	25
4.5 Error detection overview .....	26
4.6 Node reference model.....	26
4.6.1 Mapping onto OSI basic reference model .....	26
4.6.2 Data-link Layer features .....	27
4.7 Operation overview .....	27
4.7.1 Relation to ISO/IEC/IEEE 8802-3.....	27
4.7.2 Frame structure .....	27
5 Frame structure .....	28
5.1 Frame coding principles .....	28
5.2 Data types and encoding rules .....	28
5.2.1 General description of data types and encoding rules .....	28
5.2.2 Transfer syntax for bit sequences .....	28
5.2.3 Unsigned Integer .....	29
5.2.4 Signed Integer .....	30
5.2.5 Octet String .....	30
5.2.6 Visible String .....	30
5.3 Ethernet DLPDU structure.....	31
5.3.1 Type 12 frame inside an Ethernet frame .....	31
5.3.2 Type 12 frame inside a UDP datagram .....	31

5.3.3	Type 12 frame structure.....	33
5.4	Type 12 DLPDU structure .....	33
5.4.1	Read .....	33
5.4.2	Write .....	38
5.4.3	Read write .....	43
5.4.4	Attributes access .....	50
5.5	Network variable structure .....	50
5.6	Type 12 mailbox structure .....	51
6	Attributes.....	52
6.1	Management.....	52
6.1.1	DL Information.....	52
6.1.2	Station address .....	56
6.1.3	DL control.....	57
6.1.4	DL status .....	59
6.1.5	DLS-user specific registers.....	62
6.1.6	Event parameter .....	63
6.2	Statistics.....	68
6.2.1	RX error counter.....	68
6.2.2	Lost link counter .....	69
6.2.3	Additional counter.....	70
6.3	Watchdogs.....	71
6.3.1	Watchdog divider.....	71
6.3.2	DLS-user watchdog .....	72
6.3.3	Sync manager watchdog.....	72
6.3.4	Sync manager watchdog status .....	73
6.3.5	Watchdog counter.....	74
6.4	Slave information interface .....	74
6.4.1	Slave information interface area .....	74
6.4.2	Slave information interface access .....	74
6.4.3	Slave information interface control/status .....	75
6.4.4	Slave information interface address .....	77
6.4.5	Slave information interface data .....	78
6.5	Media independent interface (MII).....	78
6.5.1	MII control/status .....	78
6.5.2	MII address .....	80
6.5.3	MII data .....	81
6.5.4	MII access .....	81
6.6	Fieldbus memory management unit (FMMU) .....	82
6.6.1	General .....	82
6.6.2	FMMU attributes .....	83
6.7	Sync manager.....	85
6.7.1	Sync manager overview.....	85
6.7.2	Sync Manager Attributes.....	88
6.8	Distributed clock .....	91
6.8.1	General .....	91
6.8.2	Delay measurement.....	91
6.8.3	Local time parameter .....	92
6.8.4	DL-user time parameter .....	92
6.8.5	DC attributes .....	93

7	DL-user memory .....	95
7.1	Overview .....	95
7.2	Mailbox access type.....	95
7.2.1	Mailbox transfer.....	95
7.2.2	Write access from master .....	95
7.2.3	Read access from master .....	97
7.3	Buffered access type .....	98
7.3.1	Write access from master .....	98
7.3.2	Read access from master .....	98
8	Type 12: FDL protocol state machines.....	99

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

---

**INDUSTRIAL COMMUNICATION NETWORKS –  
FIELDBUS SPECIFICATIONS –****Part 4-12: Data-link layer protocol specification –  
Type 12 elements****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

Attention is drawn to the fact that the use of the associated protocol type is restricted by its intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a layer protocol type to be used with other layer protocols of the same type, or in other type combinations explicitly authorized by its intellectual-property-right holders.

NOTE Combinations of protocol types are specified in IEC 61784-1 and IEC 61784-2.

International Standard IEC 61158-4-12 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This fourth edition cancels and replaces the third edition published in 2014. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- technical corrections and editorial improvements for clarification.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
65C/946/FDIS	65C/955/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all the parts of the IEC 61158 series, published under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

**IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.**

## INTRODUCTION

This document is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the “three-layer” fieldbus reference model described in IEC 61158-1.

The data-link protocol provides the data-link service by making use of the services available from the physical layer. The primary aim of this document is to provide a set of rules for communication expressed in terms of the procedures to be carried out by peer data-link entities (DLEs) at the time of communication. These rules for communication are intended to provide a sound basis for development in order to serve a variety of purposes:

- a) as a guide for implementors and designers;
- b) for use in the testing and procurement of equipment;
- c) as part of an agreement for the admittance of systems into the open systems environment;
- d) as a refinement to the understanding of time-critical communications within OSI.

This document is concerned, in particular, with the communication and interworking of sensors, effectors and other automation devices. By using this document together with other standards positioned within the OSI or fieldbus reference models, otherwise incompatible systems may work together in any combination.

**NOTE** Use of some of the associated protocol types is restricted by their intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a particular data-link layer protocol type to be used with physical layer and application layer protocols in Type combinations as specified explicitly in the profile parts. Use of the various protocol types in other combinations may require permission from their respective intellectual-property-right holders.

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of patents concerning Type 12 elements and possibly other types given as follows:

EP 1 590 927 B1	[BE] Koppler für ein Netzwerk mit Ringtopologie und ein auf Ethernet basierten Netzwerk
EP 1 789 857 B1	[BE] Datenübertragungsverfahren und automatisierungssystem zum Einsatz eines solchen Datenübertragungsverfahrens
EP 2 137 893 B1	[BE] Paketvermittlungsvorrichtung und lokales Kommunikationsnetz mit einer solchen Paketvermittlungsvorrichtung
EP 1 456 722 B1	[BE] Datenübertragungsverfahren, seriellcs Bussystem und Anschalteinheit für einen passiven Busteilnehmer

IEC takes no position concerning the evidence, validity and scope of these patent rights.

The holder of these patent rights has assured the IEC that he/she is willing to negotiate licences either free of charge or under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holder of these patent rights is registered with IEC. Information may be obtained from:

[BE]: Beckhoff Automation GmbH  
Eiserstraße 5  
33415 Verl,  
Germany

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those identified above. IEC shall not be held responsible for identifying any or all such patent rights.

ISO ([www.iso.org/patents](http://www.iso.org/patents)) and IEC (<http://patents.iec.ch>) maintain on-line databases of patents relevant to their standards. Users are encouraged to consult the databases for the most up to date information concerning patents.

## **INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –**

### **Part 4-12: Data-link layer protocol specification – Type 12 elements**

#### **1 Scope**

##### **1.1 General**

The data-link layer provides basic time-critical messaging communications between devices in an automation environment.

This protocol provides communication opportunities to all participating data-link entities

- a) in a synchronously-starting cyclic manner, and
- b) in a cyclic or acyclic asynchronous manner, as requested each cycle by each of those data-link entities.

Thus this protocol can be characterized as one which provides cyclic and acyclic access asynchronously but with a synchronous restart of each cycle.

##### **1.2 Specifications**

This document specifies

- a) procedures for the transfer of data and control information from one data-link user entity to one or more user entity;
- b) the structure of the DLPDUs used for the transfer of data and control information by the protocol of this document, and their representation as physical interface data units.

##### **1.3 Procedures**

The procedures are defined in terms of

- a) the interactions between DL-entities (DLEs) through the exchange of DLPDUs;
- b) the interactions between a DL-service (DLS) provider and a DLS-user in the same system through the exchange of DLS primitives;
- c) the interactions between a DLS-provider and the MAC services of ISO/IEC/IEEE 8802-3.

##### **1.4 Applicability**

These procedures are applicable to instances of communication between systems which support time-critical communications services within the data-link layer of the OSI reference model, and which require the ability to interconnect in an open systems interconnection environment.

Profiles provide a simple multi-attribute means of summarizing an implementation's capabilities, and thus its applicability to various time-critical communications needs.

##### **1.5 Conformance**

This document also specifies conformance requirements for systems implementing these procedures. This part of this document does not contain tests to demonstrate compliance with such requirements.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE All parts of the IEC 61158 series, as well as IEC 61784-1 and IEC 61784-2 are maintained simultaneously. Cross-references to these documents within the text therefore refer to the editions as dated in this list of normative references.
