## **Larmsystem – Larmcentraler**

*Monitoring and alarm receiving centre*

Som svensk standard gäller europastandarden EN 50518:2019. Den svenska standarden innehåller den officiella engelska språkversionen av EN 50518:2019.

### **Nationellt förord**

Tidigare fastställd svensk standard SS-EN 50518-1, utgåva 2, 2014, SS-EN 50518-2, utgåva 2, 2014 och SS-EN 50518-3, utgåva 2, 2014, gäller ej fr o m 2022-02-06.

---

ICS 13.320.00

Denna standard är fastställd av SEK Svensk Elstandard,  
som också kan lämna upplysningar om **sakinnehållet** i standarden.

## *Standarder underlättar utvecklingen och höjer elsäkerheten*

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

## *SEK är Sveriges röst i standardiseringsarbetet inom elområdet*

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

## *Stora delar av arbetet sker internationellt*

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

## *Var med och påverka!*

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

This European Standard was approved by CENELEC on 2019-02-06. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## **European foreword**

This document (EN 50518:2019) has been prepared by CLC/TC 79, "Alarm systems".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2020-02-06
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2022-02-06

This documents supersedes EN 50518-1:2013, EN 50518-2:2013 and EN 50518-3:2013.

EN 50518:2017 includes the following significant technical changes with respect to EN 50518-1:2013, EN 50518-2:2013 and EN 50518-3:2013:

- referenced based standards were updated to the latest versions;
- definitions were updated;
- the scope was extended to include fire, access, CCTV, social alarms and other alarms;
- two categories ARC's are described, category I and category II. A category I ARC will be designed, constructed and operated to a higher standard with respect to construction, security and integrity than a category II ARC;
- a chapter was added which describes the management tools that shall be in place in the ARC;
- an informative annex was added which describes security and technical implications of remote access to ARC data;
- an informative annex was added which describes requirements for an alarm management system.

This revision was prepared to bring the procedures up-to-date with current technical developments, taking account of changes in the basic standards and the experience gained in the use of the standard.

## Introduction

This European Standard applies to all Monitoring and Alarm Receiving Centres (MARC's) that monitor and/or receive and/or process (alarm) messages that require an emergency response.

The abbreviation MARC describes the full functional scope of a Monitoring and Alarm Receiving centre. In all existing EN 50131 series under CLC/TC 79, "Alarm systems", the abbreviation ARC is used. To avoid confusion and to achieve consistency in terminology the abbreviation ARC will be used throughout this standard, where MARC is equivalent to ARC.

The function of receiving, processing and initiating response actions by (human or non-human) intervention is not limited to only those messages as generated by Intruder and Hold-up Alarm Systems (I&HAS). The whole series of standards under CLC/TC 79, "Alarm systems", encompasses video surveillance systems (EN 62676), social alarm systems (EN 50134), access control systems (EN 60839-11) and audio and video door entry systems. All of these systems can send information, including alarms, to one or more ARC's for further processing, evaluation and intervention.

Alarm information generated by other systems such as fire detection and fire alarm systems, (vehicle) tracking and tracing systems, man guarding or telecommunication network supervision is regularly transmitted to one or more ARC's for further processing, evaluation and intervention.

In all of these circumstances, criminal action and/or emergency situations can jeopardize the safety and security of people and/or properties. The central locations where the receiving, processing and initiation of intervention take place should comply with the requirements of this standard.

Figure 1 shows the chain of events of the total alarm process.

**Figure 1 — Chain diagram of the total alarm process**

It is noted that this European Standard cannot supersede any legislative requirements deemed necessary by a National Government to control the security sector on a national basis. This standard cannot interfere with all those items that are regulated by (inter)national regulations concerning external services (for example water, waste water, fuel supplies for gas and/or oil and mains power supplies).

## **1 Scope**

This document specifies the minimum requirements for monitoring, receiving and processing of alarm messages generated by alarm systems taking place as a part of the total fire, safety and security solution.

For the purpose of this document, the term "alarm" is used in the broad sense to include fault, status and other messages received from one or more of a range of safety and security alarm systems such as but not limited to fire detection and fire alarm systems, fixed firefighting systems, intrusion and hold-up alarm systems, access control systems, video surveillance systems, social alarms systems and combinations of such systems.

This document gives requirements for two categories of ARC, category I and category II. A category I ARC will be designed, constructed and operated to a higher standard with respect to construction, security and integrity than a category II ARC.

The categorization is determined according to the type(s) of alarm messages handled.

Category I: ARCs handling messages from security applications:

- I&HAS's;
- access control systems;
- VSS in security applications that require an emergency response (for example loss prevention);
- people monitoring, lone workers and object tracking systems for security applications;
- alarm messages handled by category II ARCs;
- combinations of the above systems.

Category II: ARC's handling messages from non-security applications:

- fire alarm systems;
- fixed firefighting systems;
- social alarm systems;
- audio/video door entry systems;
- VSS in non-security applications (for example traffic flow);
- people monitoring, lone workers and object tracking systems for non-security applications;
- lifts emergency systems;
- combinations of the above systems.

The requirements apply to ARC's (whether established in single or multiple sites) monitoring and processing alarms generated by systems installed at other locations and also to ARC's monitoring solely alarms from systems within their own site.

The document includes functional and specific requirements supporting the services of an ARC.

The document does NOT apply to:

- alarm systems used for non-civil purposes;
- alarm systems for medical or health applications.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
