CONTENTS

FOREWORD.....	4
INTRODUCTION.....	5
1 Scope.....	7
2 Normative references	7
3 Terms, definitions and abbreviated terms	8
3.1 Terms and definitions.....	8
3.2 Abbreviated terms.....	10
4 Conformance.....	10
5 IGRS RUMP overview.....	10
6 IGRS RA and RUMP system architecture and message exchange model overview.....	11
6.1 IGRS RA system structure	11
6.2 RUMP protocol layer hierarchy.....	12
6.3 Server types	13
6.3.1 IGRS RA message exchange model in the IRSP.....	13
6.3.2 Account server	14
6.3.3 Message server.....	14
6.3.4 Application server.....	15
6.3.5 IRSP external application server.....	15
6.4 Message exchange between user or controlled device and message server.....	15
6.4.1 Device registration management.....	15
6.4.2 User/controller ↔ controlled device message exchange that needs response (control message).....	16
6.4.3 Controlled device ↔ user/controller message exchange that does not need response (status update)	17
6.4.4 Controlled device ↔ user/controller message exchange that does not need response (alarm message).....	18
6.4.5 Controlled device ↔ user/controller message exchange that that needs response (firmware version query).....	18
6.5 Workflow.....	19
6.5.1 LAN control	19
6.5.2 WAN control	20
7 RUMP.....	21
7.1 Protocol overview	21
7.2 Applications	21
7.3 Logical components	21
7.4 Device ID.....	21
7.5 RUMP message format	22
7.6 RUMP response and status message format.....	23
7.7 RUMP water heater.....	23
7.7.1 Water heater control message format	23
7.7.2 Water heater response and status message format	24
7.7.3 Water heater alarm message format	25
7.8 RUMP air conditioner.....	26
7.8.1 Air conditioner control message format.....	26
7.8.2 Air conditioner response and status message format	27
7.8.3 Air conditioner alarm message format.....	27
7.9 RUMP refrigerator.....	28

© ISO/IEC 2020

7.9.1	Refrigerator control message format	28
7.9.2	Refrigerator response and status message format	29
7.9.3	Refrigerator alarm message format	29
7.10	RUMP microwave oven	30
7.10.1	Microwave oven control message format	30
7.10.2	Microwave oven response and status message format	31
7.10.3	Microwave oven alarm message format	31
7.11	Device status query message	32
7.12	Device version query message	32

Part 5-102: Intelligent grouping and resource sharing for HES Class 2 and
Class 3 – Remote universal management profile**

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.
- 3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.
- 8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 14543-5-102 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The list of all currently available parts of the ISO/IEC 14543 series, under the general title *Information technology – Home electronic system (HES) architecture*, can be found on the IEC website and ISO website.

The text of this standard is based on the following documents:

FDIS	Report on voting
JTC1-SC25/2898/FDIS	JTC1-SC25/2908/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

ISO/IEC 14543-5 (all parts) specifies the services and protocol of the application layer for intelligent grouping and resource sharing (IGRS) devices and services in the home electronic system. Some parts reference Classes 1, 2 and 3, which are HES designations specified in the HES architecture standard, ISO/IEC 14543-2-1.

ISO/IEC 14543-5 (all parts) includes the following parts.

- ISO/IEC 14543-5-1: Core protocol
 - Specifies the TCP/IP protocol stack as the basis and the HTTP protocol as the message-exchange framework among devices.
 - Specifies a series of device and service interaction/invocation standards, including device and service discovery protocol, device and service description, service invocation, security mechanisms, etc.
 - Specifies core protocols for a type of home network that supports streaming media and other high-speed data transports within a home.
- ISO/IEC 14543-5-2#: Application profile
 - Based on the IGRS core protocol.
 - Specifies a device and service interaction mechanism, as well as application interfaces used in IGRS basic applications.
 - Multiple application profiles are specified, including:
 - i) ISO/IEC 14543-5-21: AV profile
 - ii) ISO/IEC 14543-5-22: File profile
- ISO/IEC 14543-5-3: Basic application
 - Includes an IGRS basic application list.
 - Specifies a basic application framework.
 - Specifies operation details (device grouping, service description template, etc.), function definitions and service invocation interfaces.
- ISO/IEC 14543-5-4: Device validation
 - Defines a standard method to validate an IGRS-compliant device.
- ISO/IEC 14543-5-5: Device type
 - Specifies IGRS device types used in IGRS applications.
- ISO/IEC 14543-5-6: Service type
 - Specifies basic service types used in IGRS applications.
- ISO/IEC 14543-5-7: Remote access system architecture
 - Specifies the architecture and framework for the remote access of IGRS devices and services in the home electronic system. The remote access communications protocol and application profiles are specified in the following parts of ISO/IEC 14543-5:
 - i) ISO/IEC 14543-5-8: Remote access core protocol
 - ii) ISO/IEC 14543-5-9: Remote access service platform
 - iii) ISO/IEC 14543-5-101: Remote media access profile
 - iv) ISO/IEC 14543-5-102: Remote universal management profile
 - v) ISO/IEC 14543-5-11: Remote user interface
 - vi) ISO/IEC 14543-5-12: Remote access test and verification
 - The relationships among these parts are specified in Part 5-7.

- ISO/IEC 14543-5-8: Remote access core protocol
 - Provides detailed system components, system function modules, basic concepts of IGRS remote access elements and their relationships, message exchange mechanisms and security related specifications.
 - Specifies interfaces between IGRS remote access (RA) client and service platforms. Defines co-operative procedures among IGRS RA clients.
- ISO/IEC 14543-5-9: Remote access service platform
 - Specifies the IGRS RA service platform (IRSP) architectures and interfaces among servers in the service platforms.
 - Based on ISO/IEC 14543-5-8: Remote access core protocol.
- ISO/IEC 14543-5-101 and ISO/IEC 14543-5-102: Remote access application profiles
 - Defines a device and service interaction mechanism for various applications.
 - Based on ISO/IEC 14543-5-8: Remote access core protocol.
 - Two profiles have been developed:
 - i) ISO/IEC 14543-5-101: Remote media access profile. This part defines the common requirements for IGRS RA media users and devices in IGRS networks.
 - ii) ISO/IEC 14543-5-102: Remote universal management profile. This part specifies a mechanism for integrating devices with both relatively high and low processing capabilities into IGRS networks. It also specifies universal remote device discovery and a management framework.
 - Additional application profiles will be specified in the future.
- ISO/IEC 14543-5-11: Remote user interface
 - Specifies adaptive user interface generation and remote device control mechanisms suitable for different remote access applications and devices.
- ISO/IEC 14543-5-12: Remote access test and verification
 - Defines a standard method to test and verify IGRS-RA compliant device and service interfaces.

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) ARCHITECTURE –

Part 5-102: Intelligent grouping and resource sharing for HES Class 2 and Class 3 – Remote universal management profile

1 Scope

This part of ISO/IEC 14543 specifies the system architecture and communication protocols of remote universal management profile to achieve intelligent grouping, resource sharing and service collaboration among different devices and controllers. The protocol features are:

- a) remote universal device discovery and management framework that includes connection methods and network architecture, device configuration interfaces, management message formats and message exchange flows;
- b) request/response message formats for four remote universal management profile device types: water heater, refrigerator, air conditioner, microwave.

This document is applicable to remote access of water heaters, refrigerators, air conditioners, microwave ovens at home, office or other remote environments, to achieve universal management and interactions among these controllers and devices.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
