

# SVENSK STANDARD

## SS-EN 45555:2020

**Allmänna metoder för bedömning av materialåtervinningsbarhet  
och återvinningsbarhet för energirelaterade produkter**

**General methods for assessing the recyclability and  
recoverability of energy-related products**

**Sis** Svenska  
Institutet för  
Standarder

Språk: engelska/English

Utgåva: 1

Denna standard är såld av  
SEK Svensk Elstandard som även lämnar  
allmänna upplysningar om svensk och utländsk standard.  
Postadress: SEK, Box 1284, 164 29 Kista  
Telefon: 08-444 14 00.  
E-post: sek@elstandard.se Internet: www.elstandard.se

Den här standarden kan hjälpa dig att effektivisera och kvalitetssäkra ditt arbete. SIS har fler tjänster att erbjuda dig för att underlätta tillämpningen av standarder i din verksamhet.

## **SIS Abonnemang**

Snabb och enkel åtkomst till gällande standard med SIS Abonnemang, en prenumerationstjänst genom vilken din organisation får tillgång till all världens standarder, senaste uppdateringarna och där hela din organisation kan ta del av innehållet i prenumerationen.

## **Utbildning, event och publikationer**

Vi erbjuder även utbildningar, rådgivning och event kring våra mest sålda standarder och frågor kopplade till utveckling av standarder. Vi ger också ut handböcker som underlättar ditt arbete med att använda en specifik standard.

## **Vill du delta i ett standardiseringsprojekt?**

Genom att delta som expert i någon av SIS 300 tekniska kommittéer inom CEN (europeisk standardisering) och/eller ISO (internationell standardisering) har du möjlighet att påverka standardiseringsarbetet i frågor som är viktiga för din organisation. Välkommen att kontakta SIS för att få veta mer!

Upplysningar om sakinnehållet i standarden lämnas av Svenska institutet för standarder, telefon 08 - 555 520 00. Standarder kan beställas hos SIS som även lämnar allmänna upplysningar om svensk och utländsk standard.

Standarden är framtagen av kommittén för Miljöledning, SIS/TK 207.

Har du synpunkter på innehållet i den här standarden, vill du delta i ett kommande revideringsarbete eller vara med och ta fram andra standarder inom området? Gå in på [www.sis.se](http://www.sis.se) - där hittar du mer information.

Europastandarden EN 45555:2019 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av EN 45555:2019.

The European Standard EN 45555:2019 has the status of a Swedish Standard. This document contains the official version of EN 45555:2019.

EUROPEAN STANDARD  
NORME EUROPÉENNE  
EUROPÄISCHE NORM

EN 45555

November 2019

ICS 13.020.20

English version

General methods for assessing the recyclability and  
recoverability of energy-related products

Méthodes générales pour l'évaluation de la  
recyclabilité et de la récupérabilité des produits liés à  
l'énergie

Allgemeines Verfahren zur Bewertung der  
Recyclingfähigkeit und Verwertbarkeit  
energieverbrauchsrelevanter Produkte

This European Standard was approved by CEN on 6 October 2019.

CEN and CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN and CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN and CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN and CENELEC members are the national standards bodies and national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

## European foreword

This document (EN 45555:2019) has been prepared by Technical Committee CEN/CLC/JTC 10 “Energy-related products - Material Efficiency Aspects for Ecodesign”, the secretariat of which is held by NEN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by May 2020, and conflicting national standards shall be withdrawn at the latest by May 2020.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN shall not be held responsible for identifying any or all such patent rights.

The dual logo CEN-CENELEC standardization deliverables, in the numerical range 45550 – 45559, have been developed under standardization request M/543 of the European Commission and are intended to potentially apply to any product within the scope of the Directive 2009/125/EC concerning energy-related products (ErP).

Topics covered in the above standardization request are linked to the following material efficiency aspects:

- a) Extending product lifetime;
- b) Ability to reuse components or recycle materials from products at end-of-life;
- c) Use of reused components/recycled materials in products.

These standards are general in nature and describe or define fundamental principles, concepts, terminology or technical characteristics. They can be cited together with other product-specific, or product-group standards e.g. developed by product technical committees.

This document is intended to be used by technical committees when producing horizontal, generic, or product or product-group standards.

Attention is drawn to safety and other legislations relevant to ErP. Their purpose is to ensure that all products intended for or likely to be used by consumers and other users under normal or reasonable foreseeable conditions are safe.

According to the CEN-CENELEC Internal Regulations, the national standards organisations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## **Introduction**

To close the loop in a circular economy, amongst other measures, an efficient handling of waste is paramount. Recovering materials and energy can reduce environmental impacts over the product lifecycle, including reduced extraction of natural resources and associated emissions of primary material production. To determine the recycling potential of an energy-related product (ErP) in terms of how easy it is to recycle/recover materials from the product or to what degree a product can undergo recycling/recovery, the concepts of recyclability and recoverability are introduced.

While recycling of ErPs aims at closing the circular economy loop, trade-offs might arise between different material efficiency related topics. For instance mass of an ErP, durability, reparability, reusability and energy efficiency, need to be balanced in order to improve the environmental benefit. See also ISO Guide 64 [12]. Further explanation on the relationship with environmental impacts of recycling and recovery, including environmental benefits, are displayed in the informative Annex C.

**NOTE** The Waste Framework Directive 2008/98/EC [9] provides the concept of waste hierarchy, which ranks the waste management practices from highest to lowest priority as follows: prevention, preparing for reuse, recycling, recovery and disposal.

Once an ErP has reached its end-of-life (EoL) and has become waste, the ErP can be either prepared for reuse, recycled/recovered. This document elaborates on the product characteristics which are relevant for recyclability and recoverability of an entire ErP. The focus is therefore on the recyclability/recoverability of the product itself rather than the recycling or recovery processes. The general method presented in this document takes into account the availability and efficiency of state-of-the-art recycling and recovery processes to determine the recyclability/recoverability rate of an ErP. Based on the reference EoL treatment scenario, it is assumed that the assessment of the recyclability/recoverability of an ErP as a whole may be valid for a certain period of time in a given geographical area.

## 1 Scope

This document establishes general principles for:

- Assessing the recyclability of energy-related products;
- Assessing the recoverability of energy-related products.

This document also considers:

- The ability to access or remove certain components, assemblies, materials or substances from products to facilitate their extraction at the end-of-life for ease of treatment, recycling and other recovery operations;
- The recyclability of critical raw materials (CRMs).

This document defines parameters which are applicable for the development of product or product-group standards in order to calculate recyclability/recoverability rates. This document serves as a method for writing product or product-group standards, rather than being directly applied. Additional information and requirements not provided in this document will be necessary for product or product-group standards.

This document is not applicable to generate publicly available product information and compare products in absence of product standards based on this document.

Although this document can be used for a product or product-group, for the sake of a better readability only "product" is used throughout the rest of the document.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

EN 45558, *General method to declare the use of critical raw materials in energy-related products*

EN 45559:2019, *Methods for providing information relating to material efficiency aspects of energy-related products*
