CONTENTS

FOREWORD.....	4
1 Scope and object.....	6
1.1 Scope	6
1.2 Namespace name and version	6
1.3 Code Component distribution	7
2 Normative references	7
3 Terms, definitions and abbreviated terms	8
3.1 Terms and definitions.....	8
3.2 Abbreviated terms.....	8
4 Security issues addressed by this document.....	9
4.1 Operational issues affecting choice of security options	9
4.2 Security threats countered	9
4.3 Attack methods countered.....	9
5 Correlation of IEC 61850 parts and IEC 62351 parts.....	9
5.1 General.....	9
5.2 IEC 61850-8-1 Profile for Client/Server communications	10
5.2.1 General	10
5.2.2 Control centre to substation	11
5.2.3 Substation communications	11
5.3 IEC 61850 security for profiles using VLAN IDs.....	11
5.4 IEC 61850-8-2 for Client/Server communications	11
5.5 Using OriginatorID for Client/Server Services.....	11
6 Multicast Association Protocols	12
6.1 General.....	12
6.2 Replay Protection	12
6.2.1 GOOSE replay protection	12
6.2.2 Sampled Value replay protection	16
7 Security for SNTP.....	19
8 Layer 2 security for profiles for IEC 61850-8-1 GOOSE and IEC 61850-9-2 Sampled Value	20
8.1 Overview of Ethertype (informative)	20
8.2 Extended PDU	20
8.2.1 General format of extended PDU	20
8.2.2 Format of extension octets.....	21
9 Substation configuration language extensions	25
9.1 Service capability.....	25
9.1.1 Access Point support security for GOOSE Publisher.....	25
9.1.2 Access Point support security for SV Publisher.....	25
9.1.3 Access Point support security for GOOSE and SMV subscriber	25
9.1.4 Server Access Point support security for TPAA.....	26
9.1.5 Client Access Point support security for TPAA.....	26
9.2 Publish with security enabled.....	26
9.2.1 GOOSE	26
9.2.2 SMV	26
9.2.3 Key Policy and Management.....	27
9.3 Use of Simulation.....	27

10	Extension of LGOS and LSVS	27
11	Conformance	27
11.1	General conformance	27
11.2	Conformance for implementations claiming IEC 61850-8-1 ISO 9506 profile security	28
11.2.1	General	28
11.2.2	IEC 62351-4 TLS Conformity for ISO-9506 Client/Server Profile using ACSE Authentication	29
11.3	Conformance for implementations claiming VLAN profile security	29
11.4	Conformance for implementations claiming SNTP profile security	32
	Bibliography	33

INTERNATIONAL ELECTROTECHNICAL COMMISSION

**POWER SYSTEMS MANAGEMENT AND ASSOCIATED INFORMATION
EXCHANGE – DATA AND COMMUNICATION SECURITY –****Part 6: Security for IEC 61850****FOREWORD**

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 62351-6 has been prepared by IEC technical committee 57: Power systems management and associated information exchange.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
57/2234/FDIS	57/2258/RVD

Full information on the voting for the approval of this International Standard can be found in the report on voting indicated in the above table.

This document has been drafted in accordance with the ISO/IEC Directives, Part 2.

A list of all parts of the IEC 62351 series, published under the general title *Power systems management and associated information exchange – Data and communications security*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under "<http://webstore.iec.ch>" in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The 'colour inside' logo on the cover page of this publication indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

POWER SYSTEMS MANAGEMENT AND ASSOCIATED INFORMATION EXCHANGE – DATA AND COMMUNICATION SECURITY –

Part 6: Security for IEC 61850

1 Scope and object

1.1 Scope

This part of IEC 62351 specifies messages, procedures, and algorithms for securing the operation of all protocols based on or derived from the IEC 61850 series. This document applies to at least those protocols listed in Table 1.

Table 1 – Scope of application to standards

Number	Name
IEC 61850-8-1	Communication networks and systems for power utility automation – Part 8-1: Specific communication service mapping (SCSM) – Mappings to MMS (ISO/IEC 9506-1 and ISO/IEC 9506-2) and to ISO/IEC 8802-3
IEC 61850-8-2	Communication networks and systems for power utility automation – Part 8-2: Specific communication service mapping (SCSM) – Mapping to Extensible Messaging Presence Protocol (XMPP)
IEC 61850-9-2	Communication networks and systems for power utility automation – Part 9-2: Specific communication service mapping (SCSM) – Sampled values over ISO/IEC 8802-3
IEC 61850-6	Communication networks and systems for power utility automation – Part 6: Configuration description language for communication in power utility automation systems related to IEDs

The initial audience for this document is intended to be the members of the working groups developing or making use of the protocols listed in Table 1. For the measures described in this specification to take effect, they must be accepted and referenced by the specifications for the protocols themselves. This document is written to enable that process.

The subsequent audience for this document is intended to be the developers of products that implement these protocols.

Portions of this document may also be of use to managers and executives in order to understand the purpose and requirements of the work.

1.2 Namespace name and version

This new clause is mandatory for any IEC 61850 namespace (as defined by part 7-1 of IEC 61850 Edition 2).

The parameters which identify this new release of this namespace are:

- Namespace version: 2020
- Namespace revision: A
- Namespace name: “IEC 62351-6:2020A”
- Namespace release: 1

The table below provides an overview of all published versions of this namespace.

Edition	Publication date	Webstore	Namespace
Edition 1.0	2020-?	IEC 62351-6:2020	IEC 62351-6:2020

1.3 Code Component distribution

There is currently no code component scheduled for the code component downloading area.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

IEC 61850-6, *Communication networks and systems for power utility automation – Part 6: Configuration description language for communication in electrical substations related to IEDs*
