Inbrotts- och överfallslarm –  
Del 2-4: Fordringar på kombinationsdetektorer med passiv IR och  
mikrovågor**

*Alarm systems –  
Intrusion and hold-up systems –  
Part 2-4: Requirements for combined passive infrared and microwave detectors*

Som svensk standard gäller europastandarden EN 50131-2-4:2020. Den svenska standarden innehåller den officiella engelska språkversionen av EN 50131-2-4:2020.

**Nationellt förord**

Tidigare fastställd svensk standard SS-EN 50131-2-4, utgåva 1, 2008 och SS-EN 50131-2-4 IS1, utgåva 1, 2014, gäller ej fr o m 2023-06-30.

---

ICS 13.310.00

Denna standard är fastställd av SEK Svensk Elstandard,  
som också kan lämna upplysningar om **sakinnehållet** i standarden.

## *Standarder underlättar utvecklingen och höjer elsäkerheten*

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

## *SEK är Sveriges röst i standardiseringsarbetet inom elområdet*

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

## *Stora delar av arbetet sker internationellt*

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

## *Var med och påverka!*

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

This European Standard was approved by CENELEC on 2020-06-30. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

## **European foreword**

This document (EN 50131-2-4:2020) has been prepared by CLC/TC 79, "Alarm systems".

The following dates are fixed:

- latest date by which this document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2021-06-30
- latest date by which the national standards conflicting with this document have to be withdrawn (dow) 2023-06-30

This document supersedes EN 50131-2-4:2008 and all of its amendments and corrigenda (if any).

EN 50131-2-4:2020 includes the following significant technical changes with respect to EN 50131-2-4:2008:

- editorial changes and refinement of wording;
- clarification to significant reduction of range requirements;
- clarification to the Electrical requirements section and certain environmental conditions;
- addition of requirements, tests and corresponding Annexes throughout the overall standard, to support ceiling mounted detectors;
- improvement of the requirements of the supplied documentation;
- improvement of the standard conditions for testing;
- addition of chapter which defines the condition for the mounting height while the tests are performed;
- refinement of the standard requirements for the Testing procedures;
- refinement of the Immunity to air flow test to allow for better repeatability of the test results;
- verifying and clarifying of the wording of the test for resistance to or detection of re-orientation of adjustable mountings;
- updating of the test magnet specification for resistance to magnetic field interference;
- verifying and clarifying of the wording for the detection of detector masking in regards to the conditions and the test material;
- review and optimization of the methods for temperature adjustments for the test environment;
- review of Sample Testmatrix;
- review and verifying of references to other standards.

EN 50131 consists of the following parts, under the general title *Alarm systems - Intrusion and hold-up systems*:

- *Part 1: System requirements*

- *Part 2–2: Intrusion detectors – Passive infrared detectors*
- *Part 2–3: Intrusion detectors – Microwave detectors*
- *Part 2–4: Intrusion detectors – Combined passive infrared / Microwave detectors*
- *Part 2–5: Intrusion detectors – Combined passive infrared / Ultrasonic detectors*
- *Part 2–6: Intrusion detectors – Opening contacts*
- *Part 2–7–1: Intrusion detectors – Glass break detectors – Acoustic*
- *Part 2–7–2: Intrusion detectors – Glass break detectors – Passive*
- *Part 2–7–3: Intrusion detectors – Glass break detectors – Active*
- *Part 3: Control and indicating equipment*
- *Part 4: Warning devices*
- *Part 5–3: Requirements for interconnections equipment using radio frequency techniques*
- *Part 6: Power supplies*
- *Part 7: Application guidelines*
- *Part 8: Security fog devices*

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

## **Introduction**

This document deals with combined passive infrared and microwave detectors (to be referred to as the detector) used as part of intrusion alarm systems installed in buildings. It includes four security grades and four environmental classes.

The purpose of the detector is to detect the broad spectrum infrared radiation emitted by an intruder, to emit microwave signals and analyse the signals that are returned and to provide the necessary range of signals or messages to be used by the rest of the intrusion alarm system.

The number and scope of these signals or messages will be more comprehensive for systems that are specified at the higher grades.

This version of the standard contains limited requirements for Grade 4 detectors. Future revisions of the standard are expected to include enhanced requirements for Grade 4 detectors.

This document is only concerned with the requirements and tests for the detector. Other types of detector are covered by other documents identified as in the EN 50131-2 series.

**NOTE** Each country has certain regulations in regards to which part of the microwave spectrum is allowed to be used in this application. This information can be found in ERC recommendation 70-03.

## 1 Scope

This document is for combined passive infrared and microwave detectors installed in buildings and provides for security grades 1 to 4 (see EN 50131-1), specific or non-specific wired or wire-free detectors, and uses environmental classes I to IV (see EN 50130-5). This document does not include requirements for detectors intended for use outdoors.

The purpose of the detector is to detect the broad spectrum infrared radiation emitted by an intruder, to emit microwave signals and analyse the signals that are returned and to provide the necessary range of signals or messages to be used by the rest of the intrusion alarm system.

For a combined detector where both detection technologies need to be in their activated state in order to generate an alarm condition, the grade-dependent requirements of this document apply. For combined detectors which can be configured or operated such that each detection technology can generate an alarm condition independently, the grade-dependant requirements as defined in EN 50131-2-2 and EN 50131-2-3 apply, when configured accordingly. Otherwise, it is the responsibility of the manufacturer to clearly state that the detector does not comply to this document and not to EN 50131-2-2 and EN 50131-2-3 when put into such a configuration.

It is essential that a detector fulfils all the requirements of the specified grade.

Functions additional to the mandatory functions specified in this document can be included in the detector, providing they do not influence the correct operation of the mandatory functions.

Requirements for system interconnections are not included in this document.

## 2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
