Järnvägstillämpningar – Elektronisk utrustning för rälsfordon

*Railway applications –
Rolling stock –
Electronic equipment*

Som svensk standard gäller europastandarden EN 50155:2021. Den svenska standarden innehåller den officiella engelska språkversionen av EN 50155:2021.

Nationellt förord

Tidigare fastställd svensk standard SS-EN 50155, utgåva 4, 2017, gäller ej fr o m 2024-06-28.

Standarder underlättar utvecklingen och höjer elsäkerheten

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

SEK är Sveriges röst i standardiseringsarbetet inom elområdet

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

Stora delar av arbetet sker internationellt

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

Var med och påverka!

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

Betriebsmittel

This European Standard was approved by CENELEC on 2021-06-28. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

This document (EN 50155:2021) has been prepared by CLC/SC 9XB, “Electrical, electronic and electromechanical material on-board rolling stock, including associated software”.

The following dates are fixed:

- latest date by which this document has to be (dop) 2022-06-28
implemented at national level by publication of
an identical national standard or by
endorsement
- latest date by which the national standards (dow) 2024-06-28
conflicting with this document have to be
withdrawn

This document supersedes EN 50155:2017 and all of its amendments and corrigenda (if any).

EN 50155:2021 includes the following significant technical changes with respect to EN 50155:2017:

- a) Revision of Clause 1 Scope;
 - 1) Precision about definition of electronic equipment and his components;
 - 2) Precision about covered scopes;
 - 3) Precision about applicability of this standard to electronic equipment or systems performing safety-related functions.
- b) Updating of Clause 2 Normative references;
- c) Revision of Clause 3 Terms, definitions and abbreviations”, new definitions and reorganisation of subclauses;
 - 1) Definition added for “performance”;
 - 2) Definition added for “adjacent circuit”;
 - 3) Definition added for “specification”;
 - 4) Definition added for “procedure”.
- d) Improvement of Clause 4 General requirements, in terms of better wording, requirement expansion and reorganisation of subclauses;
 - 1) Precision about concept of normal performance level and concept of deviation of the normal performance level;
 - 2) Wording improvements of 4.3.2 to 4.3.4 “Performance criterion A, B and C”;
 - 3) Wording improvement of “4.6.4 Thermal compatibility”;
 - 4) Wording improvement of “4.6.6 Cabling inside vehicle” and “4.6.7 Wiring inside equipment”.
- e) Improvement of Clause 5 Electrical service conditions, with reorganisation of subclauses;
 - 1) Subclause “DC supply” is renamed “5.1.1 DC Supply system”;

- 2) Subclause “5.1.2 AC supply system” is added;
 - 3) Precisions added and editorial improvements of 5.2.1 to 5.2.8;
 - 4) Concept of “rated voltage” is clarified in 5.2.2;
 - 5) Wording improvement of subclause “5.2.6 Grouping of supply voltages”;
 - 6) Subclause added: “5.3 Supply by another source than the vehicle battery”.
- f) Improvement and simplification of Clause 6 Reliability, maintainability and expected useful life, with reorganization of subclauses and introduction of explicative figures;
- g) Wording improvements and precision added to Clause 7 Design;
- h) Clause 8 is renamed “Electronic equipment not designed for use on rolling stock application”;
- i) Improvement of Clause 9 Components, revised requirement regarding the compliance with a quality system;
- j) Wording improvements and precisions added for Clause 10 Construction;
- k) Revision of Clause 11 Safety, reorganisation of subclauses;
- l) Revision of Clause 12 Documentation;
- 1) In addition to the datasheet and user manual, equipment installation and commissioning information have to be provided to the user;
 - 2) Typical content of the datasheet, is moved to Annex J;
 - 3) The acronyms UPIC is used to designate User Programmable Integrated Circuit.
- m) Improvements of texts and figures of Clause 13 Testing;
- 1) Generation, access and delivery of type test and routine test reports, are clarified.
 - 2) Access or delivery of test reports, and tests subject to agreement must be agreed at tender stage.
 - 3) Equipment used for type tests shall be already submitted to routine test procedure and shall be identified in the type test report by its part number and serial number.
 - 4) Added : For “Prototype testing”, see Annex F – F.2.6
 - 5) Table 11 — List of tests is rearranged;
 - 6) Conditions during testing is moved in a new 13.3.2;
 - 7) Improvements and clarification of 13.4.3 DC Power supply test;
 - 8) Precisions added to 13.4.4 Low temperature test;
 - 9) Precisions added to 13.4.5 Dry heat test - including use of rated voltage;
 - 10) Precisions added to 13.4.7 Insulation test;
 - 11) Precisions added to 13.4.8 Cyclic damp heat test;

- 12) Precisions added to 13.4.10 Shock and vibration test;
 - 13) Precisions added to 13.4.12 Rapid temperature variation test;
 - 14) Precisions added to 13.4.13 Salt mist test.
- n) Improvement of the following informative Annexes:
- 1) Annex A - List of default requirements of EN 50155 and related subclauses;
 - 2) Annex B - System Testing approach;
 - 3) Annex C - Severity level of service conditions in different vehicle locations;
 - 4) Annex D - Example for a summary of equipment type test compliance;
 - 5) Annex E - User programmable integrated circuit life cycle example;
 - 6) Annex F - Design suggestions for electronic hardware used on rolling stock;
 - 7) Annex G - Electronic equipment not designed for use on rolling stock;
 - 8) Annex H – Paragraphs with agreement with the involved parties.
- o) Introduction of the following informative Annexes;
- 1) New Annex I – Electronic equipment supplied from AC supply system;
 - 2) New Annex J – Typical content of datasheets;
 - 3) New Annex K – Insulation test and testing matrix example.
- p) Bibliography (extended and corrected).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a Standardization Request given to CENELEC by the European Commission and the European Free Trade Association, and supports essential requirements of EU Directive(s) / Regulation(s).

For relationship with EU Directive(s) / Regulation(s), see informative Annex ZZ, which is an integral part of this document.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

Introduction

This document specifies the requirements for the design, the manufacturing, the documentation and testing of any electronic equipment installed on-board of rolling stock.

It also describes the electrical and environmental operating conditions.

The aim of this document is not to be a detailed guideline for the design of the electronic equipment. The design is the supplier's responsibility, however some recommendations are given in informative annexes in order to draw the attention of the designer on known design aspects. The supplier should take into account the requirements resulting from the specific location of the on-board installation (see Annex C).

This document specifies the requirements for the design, the manufacturing, the documentation and testing of any electronic equipment installed on-board rolling stock.

The roles of user and/or supplier are shown in Figure 1 below.

Figure 1 — Roles and relationship of user and/or supplier

1 Scope

This document applies to all electronic equipment for control, regulation, protection, diagnostic, energy supply, etc. installed on rail vehicles.

For the purpose of this document, electronic equipment is defined as equipment composed of electronic components (e.g. resistors, capacitors, transistors, diodes, integrated circuits, hybrids, application specific integrated circuits, wound components and relays), and recognized associated components (e.g. connectors, mechanical parts). These components are mainly mounted on printed circuit boards.

Sensors (e.g. current, voltage, speed) and semiconductor drive units for power electronic devices are covered by this standard. Complete semiconductor drive units and power converters are covered by EN 61287-1.

This document covers the requirements for operating conditions, design, documentation, testing and integration of electronic equipment, as well as hardware and software requirements considered necessary for compliant and reliable equipment.

Specific requirements related to practices necessary to ensure defined safety integrity level or functional safety are not covered by this document. Nevertheless, this document applies to the hardware of all rolling stock electronic equipment or systems performing safety-related functions.

The software requirements for on-board railway equipment are specified by EN 50657.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE 1 The IPC normative references are acceptable only until an equivalent standard from an official International or European Standardisation body will become available which cover the same requirements now covered by the referenced IPC standard.

NOTE 2 The version of IPC normative references, herein after listed, is identified by the last letter of the identification code, e.g. the letter J in IPC-A-600J identify the version J which was published in May 2016. However, the publication date is reported, even though implicit in the last letter. Consequently, the date is not repeated in the text of this document when the IPC normative references appear.
