Elektriska friledningar över 1 kV (AC) – Del 2-24: Normativ bilaga för Rumänien

Overhead electrical lines exceeding AC 1 kV –

Part 2-24: National Normative Aspects (NNA) for Romania (based on EN 50341-1:2012)

Som svensk standard gäller europastandarden EN 50341-2-24:2019. Den svenska standarden innehåller den officiella engelska språkversionen av EN 50341-2-24:2019.

Nationellt förord

Den europeiska standarden EN 50341 består av två delar:

- EN 50341-1:2012, som innehåller avsnitt gemensamma för hela CENELEC
- EN 50341-2, som innehåller nationella normativa bilagor, vilka ger de fordringar som i respektive land gäller utöver eller istället för fordringarna i motsvarande avsnitt i del 1.

Denna utgåva av standarden SS-EN 50341-2-24 innehåller den officiella engelska språkversionen av EN 50341-2-24:2019. Den gäller i Sverige tillsammans med SS-EN 50341-1, utgåva 2, 2017.

ANM – För användning tillsammans med den nationella normativa bilagan för något annat land kan den tidigare utgåvan av SS-EN 50341-1 fortsätta att gälla, enligt vad som angivits för det landet.

Standarden ska användas tillsammans med SS-EN 50341-1, utgåva 2, 2017.

Standarder underlättar utvecklingen och höjer elsäkerheten

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

SEK är Sveriges röst i standardiseringsarbetet inom elområdet

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

Stora delar av arbetet sker internationellt

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

Var med och påverka!

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

EUROPEAN STANDARD

EN 50341-2-24

NORME EUROPÉENNE

EUROPÄISCHE NORM

February 2019

ICS 29.240.20

English Version

**Overhead electrical lines exceeding AC 1 kV - Part 2-24:
National Normative Aspects (NNA) for Romania (based on EN
50341-1:2012)**

This European Standard was approved by CENELEC on 2018-11-22.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

1. The Romanian National Committee (NC) is identified by the following address:

Romanian Standards Association (ASRO)
21-25, Mendeleev Street, 010362,
Bucharest, Romania
Tel: + 40 213 101 730
Fax: + 40 213 160 870
email: asro@asro.ro
www.asro.ro

Name of the relevant technical body: Romanian Technical Committee no 165 "*Overhead electrical lines*" (ASRO/CT 165 - *Linii electrice aeriene*);
Attention: Secretary of ASRO/CT 165 – Standardisation Division

2. The Romanian NC has prepared the present EN 50341-2-24 (Part-2-24), listing the Romanian National Normative Aspects under its sole responsibility and duly passed this document through the CENELEC and CLC/TC 11 procedures.

NOTE The Romanian NC takes full responsibility for the satisfactory technically correct co-ordination of the present EN 50341-2-24 with EN 50341-1:2012. Any quality control/assurance checks necessary have been performed. However, it should be noted that such quality control/assurance has been performed under the general responsibility of the Romanian NC pursuant to national laws and regulations.

3. Part-2-24 is normative in Romania and informative for the other countries.
4. Part-2-24 shall be read in conjunction with EN 50341-1:2012 (Part 1). All clause numbers used in the present Part-2-24 correspond to the numbering in Part 1. Specific sub-clauses that are prefixed "RO" shall be read as amendments to the relevant text in Part 1. All requests for clarification relating to the application of Part-2-24 in relation to Part 1 shall be sent to the Romanian NC who will, in co-operation with CLC/TC 11, clarify the requirements.

Where no reference is made in this Part-2-24 to a specific sub-clause, then Part 1 shall apply.

5. For the "boxed values" defined in Part 1, any amended values, which are defined in Part-2-24, shall be taken into consideration in Romania. However, any boxed value, whether in Part 1 or in Part-2-24, shall not be amended in the direction of greater risk in a Project Specification.
6. The Romanian regulations and standards relating to the overhead electrical lines exceeding A.C. 1 kV, which are specifically used in the present Part 2-24, are listed in the sub-clauses 2.1/RO.2.1.1 to 2.1/RO.2.1.4.

NOTE All national standards referred to in the present Part-2-24 will be replaced by the related European Standards as they become available and are declared applicable by the Romanian NC and therefore reported to the secretariat of CLC/TC 11.

0 Introduction

0.7 Language

(ncpt) RO.1 Language

This standard is published in English and Romanian languages.

1 Scope

1.1 General

1.1 RO.1 General

(ncpt) This Part 2-24 gives the requirements for planning, design and construction of overhead electrical lines with nominal voltages exceeding A.C. 1 kV operating at 50 Hz frequency.

The present Part 2-24 is not applicable for existing overhead electrical lines unless specifically required by Project Specification. The power installations of overhead lines, that are in different stages of design or construction, can be finalised in conformity with the standards in force at project beginning.

For the application of this standard for specific requirements relating to modernization, increasing safety and transport capacity of existing overhead lines, reference shall be specified in the Project Specification. At the same time, the correlation between relevant regulations and associated standards shall be established in the Project Specifications.

The extension of existing electrical lines is considered as new overhead lines, except the junction points that shall be detailed in the Project Specifications.

1.2 Field of application

1.2 RO.1 Overhead electrical lines with insulated conductors

(ncpt) This Part 2-24 is applicable for the design and construction of overhead electrical lines with insulated conductors where the internal and external clearances can be smaller than those specified in Part 1 (SR EN 50341-1:2013).

2 Normative references, definitions and symbols

2.1 Normative references

2.1 RO.1 Application of normative references in Part 1

(A-dev) The normative references in Part 1 (SR EN 50341-1:2013) are applicable, unless otherwise specified in this Part 2-24. In Romania, for purpose of Part 2-24, the Eurocodes series given in sub-clause 2.1 of Part 1, that are adopted as national standards, shall mandatory apply.

2.1 RO.2 References to Romanian national laws, regulations and standards

(A-dev) The following national acts and normative documents contain provisions for planning, design, construction and mounting of the overhead electrical lines. These national acts and normative documents (technical regulations, standards and codes of practice) are referred to in the text in such way that some or all their content constitute requirements of this Part 2-24 and are indispensable for its application. At the time of publication, the editions indicated were valid.

Having in view that all normative documents are subject to revision, the parties to agreements based on this standard shall investigate the possibility of using the latest edition of referenced documents.

2.1 RO. 2.1.1 National laws and regulations

(A-dev) The following normative acts are national laws and regulations.

Reference	Title
Low No. 107:1996	The low of waters (with subsequent modifications and additions); <i>Legea apelor (cu modificările și completările ulterioare)</i>
Law No. 123/2012	Law on Electricity and Natural Gases (with subsequent modifications and additions); <i>Legea energiei electrice și a gazelor naturale (cu modificările și completările ulterioare)</i>
Low No. 137:1995	The low of environment protection (with subsequent modifications and additions); <i>Legea protecției mediului (cu modificările și completările ulterioare)</i>
Ordinance No. 43/1997	Ordinance concerning legal status of roads; <i>Ordonanța privind regimul juridic al drumurilor</i>

2.1 RO.2.1.2 Technical regulations

(A-dev) The following normative documents are national technical regulations.

Reference	Title
NTE 001/03/00	Insulation selection, insulation coordination and protection of electrical power installations against lightning overvoltages; <i>Normativ privind alegerea izolației, coordonarea izolației și protecția instalațiilor electroenergetice împotriva supratensiunilor</i>
NTE 003/04/00	Normative for construction of overhead transmission lines with nominal voltages exceeding 1000 V (NTE 003/04/00 is under revision); <i>Normativ pentru construcția liniilor aeriene de energie electrică cu tensiuni peste 1000 V</i> (NTE 003/04/00 este în curs de revizuire);
NTE 007/08/00	Design and execution of electric cable networks; <i>Normativ pentru proiectarea și executarea rețelelor de cabluri electrice</i>
PE 022/87	General requirements for design of electrical grids; <i>Prescripții generale de proiectare a rețelelor electrice</i>
PE 101/85	Normative for construction of electrical installations of connexions and transformers with voltages exceeding 1 kV; <i>Normativ pentru construcția instalațiilor electrice de conexiuni și transformare cu tensiuni peste 1 kV</i>
PE 101A/85	Guidelines for setting the clearances concerning the coexistences of the electric power installations with nominal voltages exceeding 1 kV with other constructions; <i>Instrucțiuni privind stabilirea distanțelor normate privind amplasarea instalațiilor energetice cu tensiunea peste 1 kV în raport cu alte construcții</i>
PE 103/92	Design and checking for electric power installations at mechanical and thermal stresses in conditions of short circuit currents; <i>Instrucțiuni pentru dimensionarea și verificarea instalațiilor electroenergetice la solicitări mecanice și termice, în condițiile curenților de scurtcircuit</i>
PE 116/94	Normative for tests and measurements performed on electrical installations and equipments. <i>Normativ de încercări și măsurări la echipamente și instalații electrice</i>
PE 125/89	Guidelines concerning coexistence coordination of the electrical installations of 1 ÷ 750 kV and telecommunication lines; <i>Instrucțiuni privind coordonarea coexistenței instalațiilor electrice de 1÷750 kV cu liniile de telecomunicații</i>
PE 127/83	Rules on technical exploitation of overhead electrical lines; <i>Regulament de exploatare tehnică a liniilor electrice aeriene</i>
ID17	Normative concerning the design, execution, checking and commissioning of electrical installations in the areas with explosion hazard (Petro- and Chemistry Industry Minister); <i>Normativ pentru proiectarea, execuția, verificarea și recepționarea de instalații electrice în zone cu pericol de explozie (Ministerul Industriei Chimiei și Petrochimiei)</i>
C 170/2007	Normative concerning corrosion protection of elements from reinforced concrete and prestressed concrete located in aggressive atmospheric environments; <i>Normativ privind protecția anticorozivă a elementelor din beton armat și beton precomprimat situate în medii agresive atmosferice</i>

M 34/80 Technical norms concerning the safety areas of aeronautic lands, developed by Civil Aviation Department; *Norme tehnice privind zonele de siguranță ale terenurilor de aeronautică, elaborate de Departamentul Aviației Civile*

2.1 RO.2.1.3 Codes of practice

(ncpt) The following documents are recommended to be used as codes of practice for design and construction of overhead electrical lines.

Reference	Title
I.LI-Ip4/17-2012	Design and execution of medium voltage overhead lines equipped with twisted pair cables, hanging wire included or self support; <i>Îndrumar de proiectare și execuție pentru linii electrice aeriene de medie tensiune cu cabluri torsadate cu sau fără fir purtător</i>
1.LI- Ip 28–1994	Design concerning the coexistence conditions of overhead electrical lines with telecommunications networks; <i>Îndreptar de proiectare privind condițiile de coexistență a liniilor de energie electrică cu liniile de telecomunicații</i>
1RE-Ip30-2004	Design and execution of earthing systems; <i>Îndreptar de proiectare și execuție a instalațiilor de legare la pământ</i>
1E Ip 35/1-2004	Design of medium voltage networks with earthed neutral through the resistance; <i>Îndreptar de proiectare pentru rețele de medie tensiune cu neutru legat la pământ prin rezistență</i>
1LI-Ip38	Design of high voltage overhead lines – Proximities and crossings of high voltage overhead lines of 110÷400 kV to the other installations; <i>Îndreptar pentru proiectarea liniilor electrice de înaltă tensiune - Apropii și traversări ale liniilor electrice de înaltă tensiune de 110÷400 kV față de alte instalații</i>
1.E-Ip 38 /1989	Use of land surfaces required for thermal power plants, electrical grids and district heating grids; <i>Îndreptar pentru folosirea suprafețelor de teren necesare pentru termocentrale, rețele electrice și rețele de termoficare</i>
1.E-Ip 69-1991	Selection of optimal solutions of warning systems of towers and conductors of overhead electrical lines; <i>Îndreptar pentru alegerea soluțiilor optime de balizare a stâlpilor și conductoarelor liniilor electrice aeriene</i>
1.LI-Ip 33-1983	Design and construction of overhead electrical lines with nominal voltage of 110 kV, 220 kV and 400 kV in the areas with strong meteorological phenomena; <i>Instrucțiuni de proiectare și construcții pentru linii electrice aeriene de 110 kV, 220 kV și 400 kV în zone cu fenomene meteorologice intense</i>
3RE-Ip41-1992	Design and operation concerning the protection against influences determined by the proximities between overhead electrical lines; <i>Instrucțiuni de proiectare și exploatare privind protecția împotriva influențelor datorate apropiierilor dintre liniile electrice aeriene</i>

2.1 RO.2.1.4 Romanian standards

(ncpt) The following normative documents are Romanian standards and European/international standards adopted as national standards.

Reference	Title
SR 438-1:2012	Steel products for concrete reinforcement - Part 1: Hot rolled structural steel. Grades and quality technical requirements; <i>Produse de oțel pentru armarea betonului - Partea 1: Oțel beton laminat la cald. Mărci și condiții tehnice de calitate</i>
