Edition: 1

Denna standard är såld av
SEK Svensk Elstandard som även lämnar
allmänna upplysningar om svensk och utländsk standard.
Postadress: SEK, Box 1284, 164 29 Kista
Telefon: 08-444 14 00.
E-post: sek@elstandard.se Internet: www.elstandard.se

Den här standarden kan hjälpa dig att effektivisera och kvalitetssäkra ditt arbete. SIS har fler tjänster att erbjuda dig för att underlätta tillämpningen av standarder i din verksamhet.

SIS Abonnemang

Snabb och enkel åtkomst till gällande standard med SIS Abonnemang, en prenumerationstjänst genom vilken din organisation får tillgång till all världens standarder, senaste uppdateringarna och där hela din organisation kan ta del av innehållet i prenumerationen.

Utbildning, event och publikationer

Vi erbjuder även utbildningar, rådgivning och event kring våra mest sålda standarder och frågor kopplade till utveckling av standarder. Vi ger också ut handböcker som underlättar ditt arbete med att använda en specifik standard.

Vill du delta i ett standardiseringsprojekt?

Genom att delta som expert i någon av SIS 300 tekniska kommittéer inom CEN (europeisk standardisering) och/eller ISO (internationell standardisering) har du möjlighet att påverka standardiseringsarbetet i frågor som är viktiga för din organisation. Välkommen att kontakta SIS för att få veta mer!

Standarden är framtagen av kommittén för Anläggningsdokumentation och schemasymboler, SIS/TK 507/AG 03.

Har du synpunkter på innehållet i den här standarden, vill du delta i ett kommande revideringsarbete eller vara med och ta fram andra standarder inom området? Gå in på www.sis.se - där hittar du mer information.

Den internationella standarden ISO 81346-10:2022 gäller som svensk standard. Detta dokument innehåller den officiella engelska versionen av ISO 81346-10:2022.

Denna standard ersätter SIS-ISO/TS 81346-10:2015, utgåva 1

The International Standard ISO 81346-10:2022 has the status of a Swedish Standard. This document contains the official English version of ISO 81346-10:2022.

This standard supersedes the SIS-ISO/TS 81346-10:2015, edition 1

LÄSANVISNINGAR FÖR STANDARDER

I dessa anvisningar behandlas huvudprinciperna för hur regler och yttre begränsningar anges i standardiseringsprodukter.

Krav

Ett krav är ett uttryck i ett dokumentets innehåll som anger objektivet verifierbara kriterier som ska uppfyllas och från vilka ingen avvikelse tillåts om efterlevnad av dokumentet ska kunna åberopas. Krav uttrycks med hjälpverbet ska (eller ska inte för förbud).

Rekommendation

En rekommendation är ett uttryck i ett dokumentets innehåll som anger en valmöjlighet eller ett tillvägagångssätt som bedöms vara särskilt lämpligt utan att nödvändigtvis nämna eller utesluta andra. Rekommendationer uttrycks med hjälpverbet bör (eller bör inte för avrådanden).

Instruktion

Instruktioner anges i imperativ form och används för att ange hur något görs eller utförs. De kan underordnas en annan regel, såsom ett krav eller en rekommendation. De kan även användas självständigt, och är då att betrakta som krav.

Förklaring

En förklaring är ett uttryck i ett dokumentets innehåll som förmedlar information. En förklaring kan uttrycka tillåtelse, möjlighet eller förmåga. Tillåtelse uttrycks med hjälpverbet får (eller motsatsen behöver inte). Möjlighet och förmåga uttrycks med hjälpverbet kan (eller motsatsen kan inte).

READING INSTRUCTIONS FOR STANDARDS

These instructions cover the main principles for the use of provisions and external constraints in standardization deliverables.

Requirement

A requirement is an expression, in the content of a document, that conveys objectively verifiable criteria to be fulfilled, and from which no deviation is permitted if conformance with the document is to be claimed. Requirements are expressed by the auxiliary shall (or shall not for prohibition).

Recommendation

A recommendation is an expression, in the content of a document, that conveys a suggested possible choice or course of action deemed to be particularly suitable, without necessarily mentioning or excluding others. Recommendations are expressed by the auxiliary should (or should not for dissuasion).

Instruction

An instruction is expressed in the imperative mood and is used in order to convey an action to be performed. It can be subordinated to another provision, such as a requirement or a recommendation. It can also be used independently and is then to be regarded as a requirement.

Statement

A statement is an expression, in the content of a document, that conveys information. A statement can express permission, possibility or capability. Permission is expressed by the auxiliary may (its opposite being need not). Possibility and capability are expressed by the auxiliary can (its opposite being cannot).

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 10, *Technical product documentation*, Subcommittee SC 10, *Process plant documentation*, in cooperation with the Technical Committee IEC/TC 3, *Information structures and elements, identification and marking principles, documentation and graphical symbols*.

This document cancels and replaces ISO/TS 81346-10:2015, which has been technically revised.

The main changes are as follows:

- converted to an International Standard;
- structure adapted to that of IEC 81346-1;
- only requirements constituting a modification or addition to those of IEC 81346-1 have been included;
- reference is made to ISO 81346-12, with which this document is intended to be used, if needed;
- the abbreviation RDS-PS is introduced for reference designation system for power supply systems, providing an identifier to reference designation systems according to this document.

Documents in the 80000 to 89999 range of reference numbers are developed by collaboration between ISO and IEC.

A list of all parts in the ISO 81346 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document considers and supports planning, erection, utilization and operation of power supply systems. The application of a reference designation system for power supply systems (RDS-PS) can lead to restructuring and reorientation of these activities and thereby offers chances and potential of increasing efficiency and economization.

This document has shifted from the focus of the previous technical specification (ISO/TS 81346-10:2015), where fixed syntax and focus on coding mechanism were dominant, towards full flexibility in dividing systems into system elements in a non-fixed manner (i.e. no fixed syntax), using one or more aspects at the same time to designate objects of interest. Locations can also be designated accordingly in order to reference the location of objects. [Annex E](#) provides a mapping of letter codes between ISO/TS 81346-10:2015 and this document.

Furthermore, this document is aligned with ISO 81346-12 for construction works (referred to as RDS-CW), in order to support harmonization of methods and principles for forming reference designations across the industry-specific applications of the ISO 81346 series.

The following advantages of designation systems in accordance with this document and the IEC/ISO 81346 series in general will become increasingly important in the future. The following should be noted:

- The reference designation system can be applied in several technical fields in the same way and is not designed for one field only. Therefore, process, mechanical, electrical and structural design, for example, can be treated in the same way, which is a basis for company-wide synergy effects.
- The reference designation system allows for integrating any kind of systems and components without changing the once-defined designations.
- The reference designation is not bound to a fixed structural pattern. Thus, the designation system is vertically and horizontally expandable, which can make the interpretability in some cases quite complex. Therefore, an exact documentation and description of the designation system is important when it is applied.
- The application of different aspects allows for the designation of system elements by function, realizing products or location independently of each other.
- The different aspects used for structuring and the possibility of creating relations between objects represented in these structures offer search and filter criteria and information correlations in a much greater variety than before.

The users of this document will be able to manage objects and related properties in a more efficient and consistent way. When implemented, information across various data processing systems can be handled in an unambiguous way. Other information structures besides those described in this document are:

- organization structures;
- utilization structures;
- cost structures;
- performance structures;
- real estate structures.

This document is applicable for all types of assets used for energy conversion and provision to transmission, distribution or local energy networks, for example:

- large central conventional or renewable power generation systems
 - thermal power plants;

- hydropower plants;
- nuclear power plants;
- onshore and offshore wind farms;
- photovoltaic and solar power plants;
- geothermal plants;
- distributed and/or renewable energy resources
 - wind turbine generators;
 - diesel and gas generators;
 - photovoltaic, solar thermal and combined heat and power (CHP) units;
 - generation from combustible renewables;
- storage or a combination of storage technologies
 - thermal storage;
 - electrochemical storage;
 - electrical storage;
 - mechanical storage;
- power to X technologies
 - power to gas;
 - power to liquid;
 - power to heat;
- transmission and distribution systems, including technical equipment provided by such systems.

New technologies with the purpose of reducing CO₂ emissions, such as coal gasification, air separation and amine scrubbing, are also covered by this document. It applies, furthermore, to digital process control systems, operational management systems (e.g. asset management systems and virtual power plants used for demand response or aggregation) and the designation of related application software.

Due to the natural diversification of international energy infrastructures, this document will enable and support the establishment of regional or branch-specific application profiles in order to provide the required level of interoperability of designations among different stakeholder groups.

Industrial systems, installations and equipment and industrial products — Structuring principles and reference designations —

Part 10: Power supply systems

1 Scope

This document provides rules for structuring of systems in the domain of power supply systems, being supplementary to the general principles for the structuring of systems including structuring of information about systems specified in IEC 81346-1.

Based on these principles, rules and guidance are given for the formulation of unambiguous reference designations for objects in any system.

The reference designation identifies objects for the purpose of creation and retrieval of information about an object and, where realized, about its corresponding component.

A reference designation labelled at a component is the key to finding information about that object among different kinds of documents.

The principles are general and are applicable to all technical areas (e.g. mechanical engineering, electrical engineering, construction engineering, process engineering). They can be used for systems based on different technologies or for systems combining several technologies.

This document also defines classes for systems and spaces in the field of power supply systems.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
