FOREWORD.....	10
INTRODUCTION.....	12
1 Scope.....	15
2 Normative references	15
3 Terms, definitions, and abbreviated terms	18
3.1 Terms and definitions	18
3.2 Abbreviated terms	26
3.3 Conventions for installation profiles	27
4 Installation planning	27
4.1 Introduction	27
4.1.1 Objective	27
4.1.2 Cabling in industrial premises	27
4.1.3 The planning process	30
4.1.4 Specific requirements for CPs	31
4.1.5 Specific requirements for generic cabling in accordance with ISO/IEC 24702	31
4.2 Planning requirements.....	31
4.2.1 Safety.....	31
4.2.2 Security.....	31
4.2.3 Environmental considerations and EMC.....	32
4.2.4 Specific requirements for generic cabling in accordance with ISO/IEC 24702	33
4.3 Network capabilities	33
4.3.1 Network topology.....	33
4.3.2 Network characteristics	35
4.4 Selection and use of cabling components.....	38
4.4.1 Cable selection.....	38
4.4.2 Connecting hardware selection.....	41
4.4.3 Connections within a channel/permanent link	43
4.4.4 Terminators	48
4.4.5 Device location and connection	48
4.4.6 Coding and labelling	49
4.4.7 Earthing and bonding of equipment and devices and shielded cabling	49
4.4.8 Storage and transportation of cables	57
4.4.9 Routing of cables.....	58
4.4.10 Separation of circuits.....	59
4.4.11 Mechanical protection of cabling components.....	60
4.4.12 Installation in special areas	61
4.5 Cabling planning documentation.....	61
4.5.1 Common description.....	61
4.5.2 Cabling planning documentation for CPs	61
4.5.3 Network certification documentation	62
4.5.4 Cabling planning documentation for generic cabling in accordance with ISO/IEC 24702	62
4.6 Verification of cabling planning specification	62
5 Installation implementation	62
5.1 General requirements.....	62

5.1.1	Common description	62
5.1.2	Installation of CPs	62
5.1.3	Installation of generic cabling in industrial premises	62
5.2	Cable installation	62
5.2.1	General requirements for all cabling types	62
5.2.2	Installation and routing	68
5.2.3	Specific requirements for CPs	70
5.2.4	Specific requirements for wireless installation	70
5.2.5	Specific requirements for generic cabling in accordance with ISO/IEC 24702	70
5.3	Connector installation	70
5.3.1	Common description	70
5.3.2	Shielded connectors	70
5.3.3	Unshielded connectors	71
5.3.4	Specific requirements for CPs	71
5.3.5	Specific requirements for wireless installation	71
5.3.6	Specific requirements for generic cabling in accordance with ISO/IEC 24702	71
5.4	Terminator installation	71
5.4.1	Common description	71
5.4.2	Specific requirements for CPs	71
5.5	Device installation	71
5.5.1	Common description	71

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INDUSTRIAL COMMUNICATION NETWORKS –

Installation of communication networks in industrial premises

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication should be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability should attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC should not be held responsible for identifying any or all such patent rights.

International Standard IEC 61918 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial process measurement, control and automation.

This standard is to be used in conjunction with the IEC 61784-5 series with regard to the installation of communication profiles (CPs). This standard is to be used in conjunction with ISO/IEC 14763-2 with regard to the installation of generic cabling in accordance with ISO/IEC 24702.

NOTE For further information, see the Introduction.

This standard was developed in cooperation with ISO/IEC JTC1/SC25 which is responsible for ISO/IEC 24702.

The text of this standard is based on the following documents:

FDIS	Report on voting
65C/467/FDIS	65C/478/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be:

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

The contents of the corrigendum of February 2009 have been included in this copy.

INTRODUCTION

Process and factory automation are increasingly relying on communication networks and fieldbuses that are inherently designed to cope with the specific environmental conditions of the industrial premises. The networks and fieldbuses provide for an effective integration of the applications among the several functional units of the plant/factory. As a result the integration of field generated data with higher-level management systems can produce reduction in production costs while maintaining or increasing quantity and quality of production. A correct network installation is an important prerequisite for communications availability and performance. This requires proper consideration of important aspects of industrial automation sites such as topologies, climatic conditions, vibrations, chemical pollution, EMC, functional safety.

The specifications of these communication networks are provided in the following standards.

ISO/IEC 24702 specifies design of generic telecommunications infrastructures within industrial premises and provides the foundations for some of the transmission performance specifications of this standard. ISO/IEC 24702 specifies only the raw bandwidth capability of a channel; it does not specify useful data transfer rate for a specific network using that channel or expected errors after taking account of interference during the communication process.

IEC 61158 fieldbus standard and its companion standard IEC 61784 (including parts 1, 2, 3, 4 and relevant subparts) jointly specify several CPs suitable for industrial automation. These CPs specify a raw bandwidth capability and in addition, they specify bit modulation and encoding rules for their fieldbus. Some profiles also specify target levels for useful data transfer rate, and maximum values for errors caused by interference during the communication process.

This standard provides a consistent set of installation rules for both the generic cabling (of the telecommunication infrastructures) and the fieldbuses in industrial premises. One of the problems it seeks to solve is the situation created when different parts of a large automation site are provided by suppliers that use non-homogeneous installation guidelines having different structures and contents. This creates a risk that communication system may not work properly.

This standard was developed by harmonising the approaches of several user groups and industrial consortia.

This standard provides a common point of reference for the installation of the media of most used industrial communication networks for most industrial sites. The standard covers the life cycle of an installation in the following clauses (see the map of the standard in Figure 1):

- Clause 4: Installation planning;
- Clause 5: Installation implementation;
- Clause 6: Installation verification and acceptance test;
- Clause 7: Installation administration;
- Clause 8: Installation maintenance and troubleshooting.

The methods described in these clauses are written in such a way as to provide installation guidance for a wide range of technician skills.

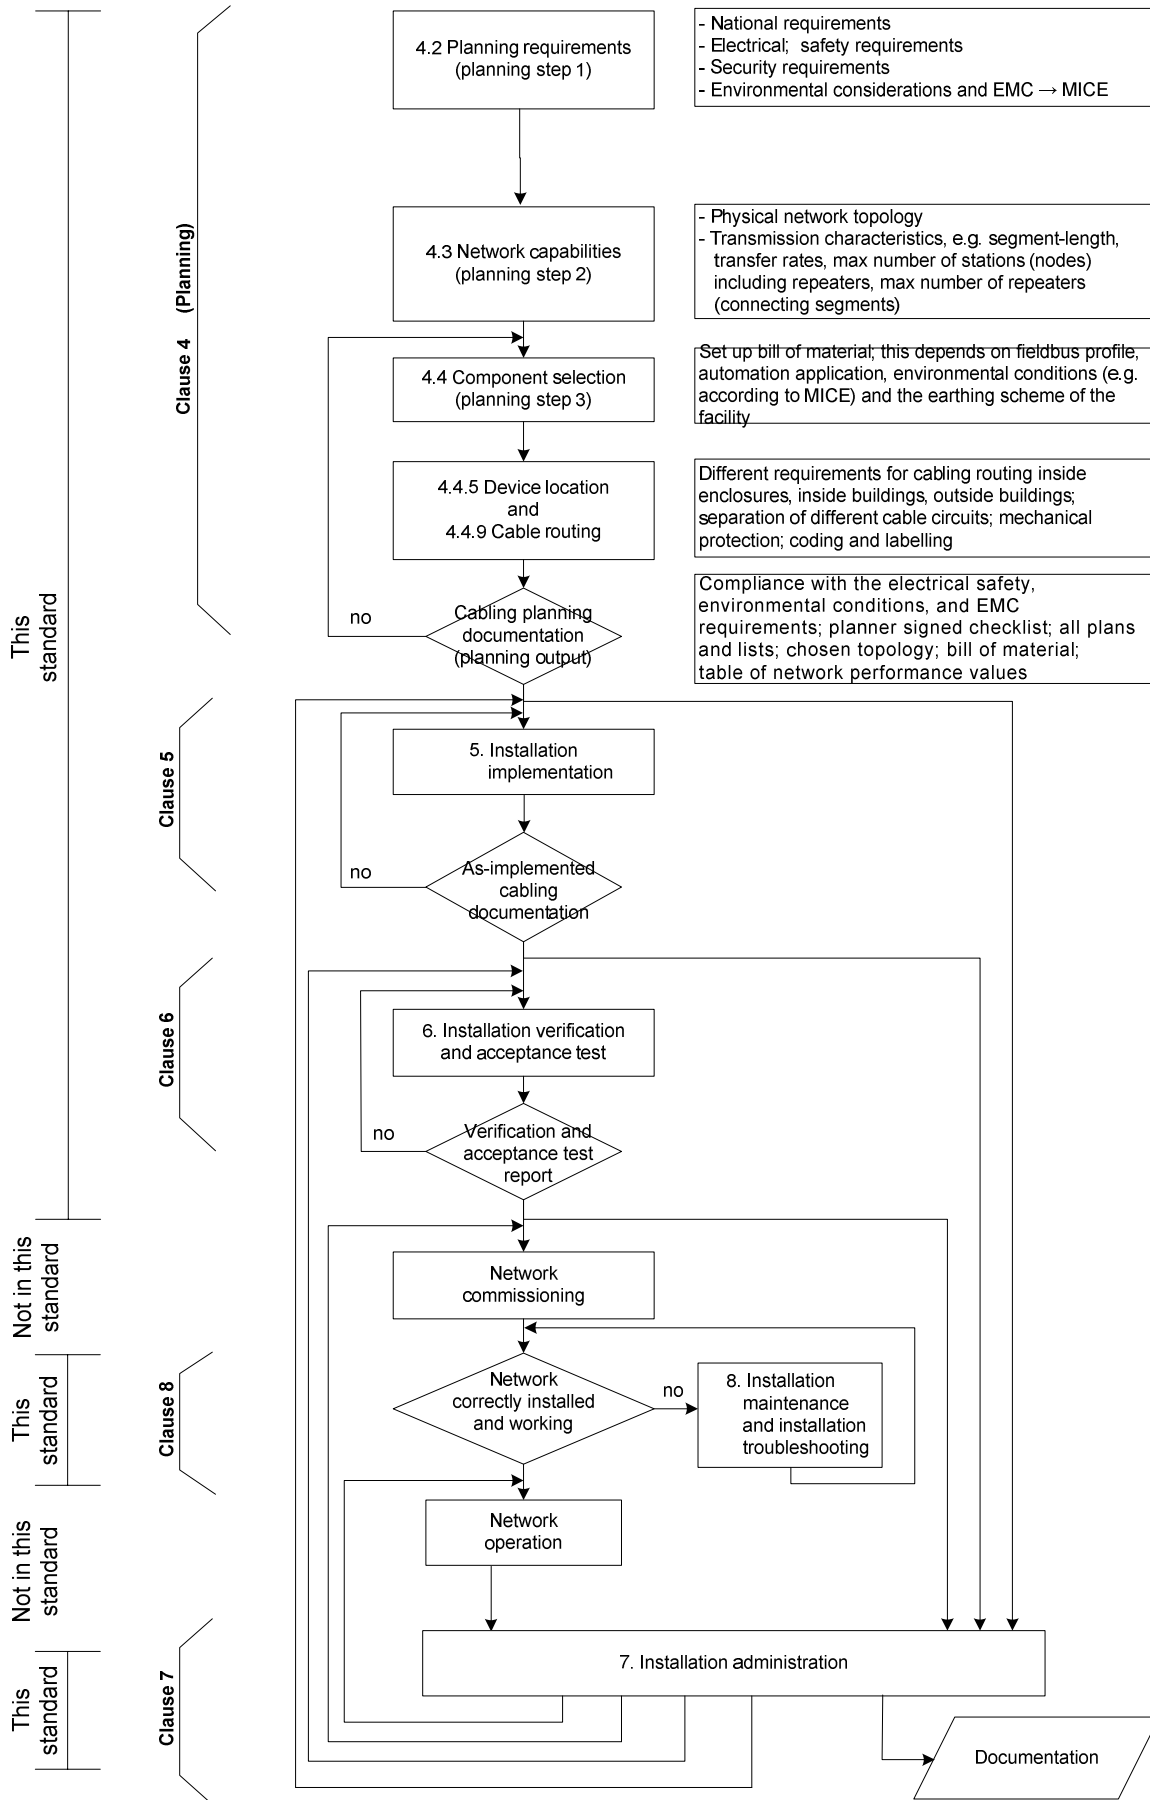

Figure 1 – Industrial network installation life cycle

For each communication system, this standard is to be used in conjunction with the relevant installation profile that establishes which selections, additions and replacements of the subclauses of this standard apply.

As regards the communication profiles (CPs) of the communication profile families (CPF) defined in IEC 61784 series, the relevant installation profiles are available in IEC 61784-5-x series, where x is the number of CPF x. IEC/TR 61158-1 describes the relationship between the fieldbus and the CPs and the relevant installation profiles (see Figure 2).

For the installation of generic cabling, this standard is to be used in conjunction with ISO/IEC 14763-2 (see Figure 2).

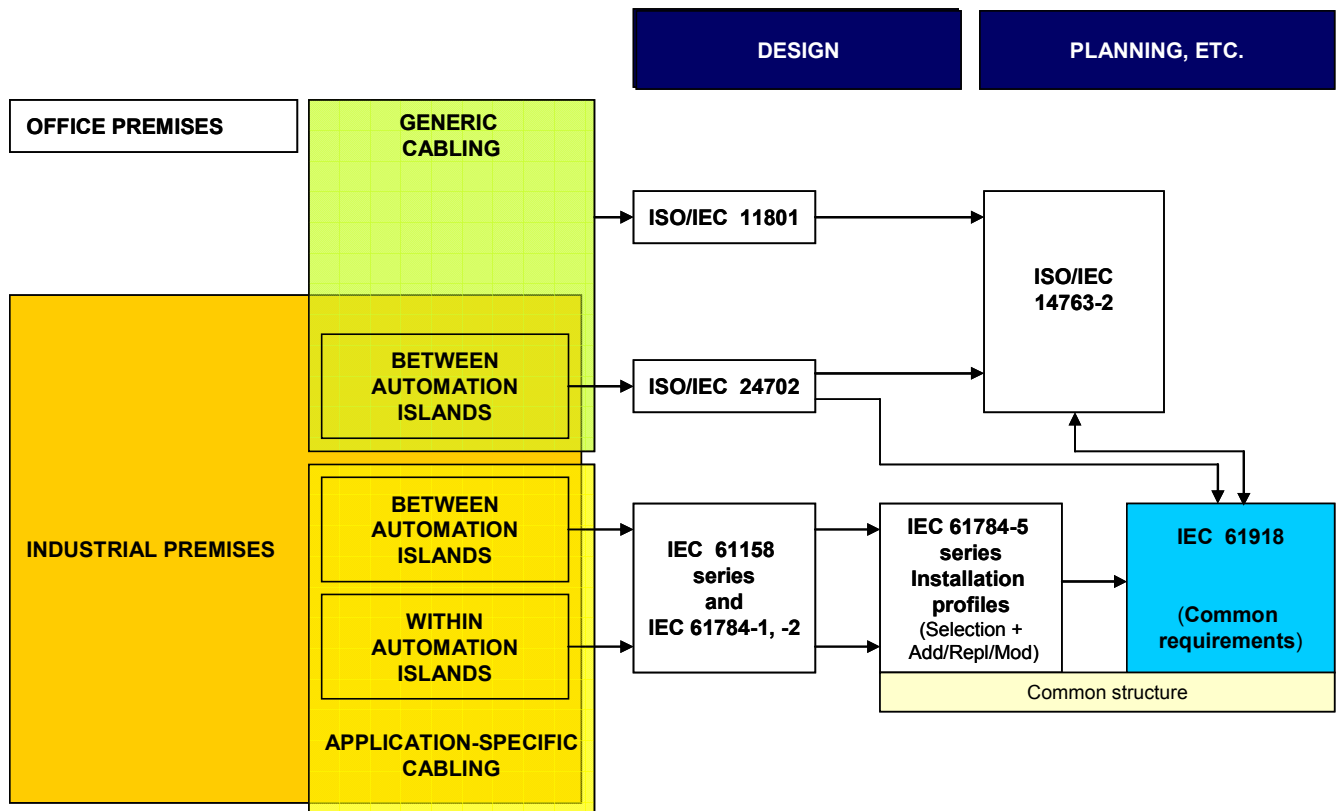

Figure 2 – Standards relationships

INDUSTRIAL COMMUNICATION NETWORKS –

Installation of communication networks in industrial premises

1 Scope

This International Standard specifies basic requirements for the installation of media for communication networks in industrial premises and within and between the automation islands, of industrial sites. This standard covers balanced and optical fibre cabling. It also covers the cabling infrastructure for wireless media, but not the wireless media itself. Additional media are covered in IEC 61784-5 series.

This standard is a companion standard to the communication networks of the industrial automation islands and especially to the communication networks specified in the IEC 61158 series and the IEC 61784 series. In addition, this standard covers:

- the installation of generic telecommunication cabling for industrial premises as specified in ISO/IEC 24702;
- the connection between the generic telecommunications cabling specified in ISO/IEC 24702 and the specific communication cabling of an automation island, where an automation outlet (AO) replaces the telecommunication outlet (TO) of ISO/IEC 24702.

NOTE If the interface used at the AO does not conform to that specified for the TO of ISO/IEC 24702, the cabling no longer conforms to ISO/IEC 24702 although certain features, including performance, of generic cabling may be retained.

This standard provides guidelines that cope with the critical aspects of the industrial automation area (topologies, climatic conditions, vibrations, chemical pollution, EMC, functional safety, security, etc.).

This standard deals with the roles of planner, installer, verifier, and acceptance test personnel, administration and maintenance personnel and specifies the relevant responsibilities and/or gives guidance.

IEC 60947-5-2, *Low-voltage switchgear and controlgear – Part 5-2: Control circuit devices and switching elements – Proximity switches*

IEC 60950-1:2005, *Information technology equipment – Safety – Part 1: General requirements*

IEC 61076-2-101, *Connectors for electronic equipment – Product requirements – Part 2-101: Detail specification for circular connectors M12 with screw-locking¹*

IEC 61076-3-106, *Connectors for electronic equipment – Product requirements – Part 3-106: Rectangular connectors – Detail specification for protective housings for use with 8-way shielded and unshielded connectors for industrial environments incorporating the IEC 60603-7 series interface*

IEC/PAS 61076-3-117, *Connectors for electronic equipment - Product requirements – Part 3-117: Rectangular connectors – Protective housings for use with 8-way shielded and unshielded connectors for frequencies up to 600 MHz for industrial environments incorporating IEC 60603-7*

IEC 61158-2, *Industrial communication networks – Fieldbus specifications – Part 2: Physical layer specification and service definition*

IEC 61754-2, *Fibre optic connector interfaces – Part 2: Type BFOC/2,5 connector family*

IEC 61754-4, *Fibre optic connector interfaces – Part 4: Type SC connector family*

IEC 61754-20, *Fibre optic connector interfaces – Part 20: Type LC connector family*

IEC 61754-22, *Fibre optic connector interfaces – Part 22: Type F-SMA connector family*

IEC 61784-1, *Industrial communication networks – Profiles – Part 1: Fieldbus profiles*

¹ To be published.

IEC 61784-2, *Industrial communication networks – Profiles – Part 2: Additional fieldbus profiles for real-time networks based on ISO/IEC 8802-3*

IEC 61784-3, *Industrial communication networks – Profiles – Part 3: Functional safety fieldbuses – General rules and profile definitions*

IEC 61784-4, *Industrial communication networks – Profiles – Part 4: Profiles for secure communications in industrial networks* (in preparation)

IEC 61784-5 series, *Industrial communication networks – Profiles –*

Part 5-2: Installation of fieldbuses – Installation profiles for CPF 2

Part 5-3: Installation of fieldbuses – Installation profiles for CPF 3

Part 5-6: Installation of fieldbuses – Installation profiles for CPF 6

Part 5-10: Installation of fieldbuses – Installation profiles for CPF 10

Part 5-11: Installation of fieldbuses – Installation profiles for CPF 11

IEC 61935-1:2005, *Testing of balanced communication cabling in accordance with ISO/IEC 11801 – Part 1: Installed cabling*

IEC 62439, *Industrial communication networks – High availability automation networks*¹

IEC 62443, *Security for industrial process measurement and control – Network and system security* (in preparation)

ISO/IEC 8802-3, *Information technology – Telecommunications and information exchange between systems – Local and metropolitan area networks – Specific requirements – Part 3: Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications*

ISO/IEC 11801:2002, *Information technology – Generic cabling for customer premises*

ISO/IEC 14763-1, *Information technology – Implementation and operation of customer premises cabling – Part 1: Administration*

ISO/IEC 14763-2, *Information technology – Implementation and operation of customer premises cabling – Part 2: Planning and installation*

ISO/IEC 14763-3, *Information technology – Implementation and operation of customer premises cabling – Part 3: Testing of optical fibre cabling*

ISO/IEC 18010, *Information technology – Pathways and spaces for customer premises cabling*

ISO/IEC 24702:2006, *Information technology – Generic cabling – Industrial premises*

EN 50377-6-1, *Connector sets and interconnect components to be used in optical fibre communication systems, Product specifications, Part 6-1: Type SC-RJ terminated on IEC 60793-2 category A1a and A1b multimode fibre*

EN 122120, *Sectional specification: Radio frequency coaxial connectors series TNC*

ANSI/NFPA T3.5.29 R1-2003, *Fluid power systems and components – Electrically-controlled industrial valves – Interface dimensions for electrical connectors*
