Industriell processstyrning – Fältbuss – Del 4-2: Specifikation av protokoll i datalänksskiktet – Delar i fältbuss, Typ 2

*Industrial communication networks –
Fieldbus specifications –
Part 4-2: Data-link layer protocol specification –
Type 2 elements*

Som svensk standard gäller europastandarden EN IEC 61158-4-2:2023. Den svenska standarden innehåller den officiella engelska språkversionen av EN IEC 61158-4-2:2023.

Nationellt förord

Europastandarden EN IEC 61158-4-2:2023

består av:

- **europastandardens ikraftsättningsdokument**, utarbetat inom CENELEC
- **IEC 61158-4-2, Fifth edition, 2023 - Industrial communication networks – Fieldbus specifications – Part 4-2: Data-link layer protocol specification – Type 2 elements**

utarbetad inom International Electrotechnical Commission, IEC.

Tidigare fastställd svensk standard SS-EN IEC 61158-4-2, utg 4:2019 med eventuella tillägg, ändringar och rättelser gäller ej fr o m 2026-04-13.

ICS 25.040.40; 35.100.20; 35.100.00

Standarder underlättar utvecklingen och höjer elsäkerheten

Det finns många fördelar med att ha gemensamma tekniska regler för bl a mätning, säkerhet och provning och för utförande, skötsel och dokumentation av elprodukter och elanläggningar.

Genom att utforma sådana standarder blir säkerhetsfordringar tydliga och utvecklingskostnaderna rimliga samtidigt som marknadens acceptans för produkten eller tjänsten ökar.

Många standarder inom elområdet beskriver tekniska lösningar och metoder som åstadkommer den elsäkerhet som föreskrivs av svenska myndigheter och av EU.

SEK är Sveriges röst i standardiseringsarbetet inom elområdet

SEK Svensk Elstandard svarar för standardiseringen inom elområdet i Sverige och samordnar svensk medverkan i internationell och europeisk standardisering. SEK är en ideell organisation med frivilligt deltagande från svenska myndigheter, företag och organisationer som vill medverka till och påverka utformningen av tekniska regler inom elektrotekniken.

SEK samordnar svenska intressenters medverkan i SEKs tekniska kommittéer och stödjer svenska experters medverkan i internationella och europeiska projekt.

Stora delar av arbetet sker internationellt

Utformningen av standarder sker i allt väsentligt i internationellt och europeiskt samarbete. SEK är svensk nationalkommitté av International Electrotechnical Commission (IEC) och Comité Européen de Normalisation Electrotechnique (CENELEC).

Standardiseringsarbetet inom SEK är organiserat i referensgrupper bestående av ett antal tekniska kommittéer som speglar hur arbetet inom IEC och CENELEC är organiserat.

Arbetet i de tekniska kommittéerna är öppet för alla svenska organisationer, företag, institutioner, myndigheter och statliga verk. Den årliga avgiften för deltagandet och intäkter från försäljning finansierar SEKs standardiseringsverksamhet och medlemsavgift till IEC och CENELEC.

Var med och påverka!

Den som deltar i SEKs tekniska kommittéarbete har möjlighet att påverka framtida standarder och får tidig tillgång till information och dokumentation om utvecklingen inom sitt teknikområde. Arbetet och kontakterna med kollegor, kunder och konkurrenter kan gynnsamt påverka enskilda företags affärsutveckling och bidrar till deltagarnas egen kompetensutveckling.

Du som vill dra nytta av dessa möjligheter är välkommen att kontakta SEKs kansli för mer information.

EN IEC 61158-4-2

April 2023

ICS 25.040.40; 35.100.20; 35.110

Supersedes EN IEC 61158-4-2:2019

English Version

**Industrial communication networks - Fieldbus specifications -
Part 4-2: Data-link layer protocol specification - Type 2 elements
(IEC 61158-4-2:2023)**

Réseaux de communication industriels - Spécifications des bus de terrain - Partie 4-2: Spécification du protocole de la couche liaison de données - Éléments de type 2
(IEC 61158-4-2:2023)

Industrielle Kommunikationsnetze - Feldbusse – Teil 4-2:
Protokollspezifikation des Data Link Layer
(Sicherungsschicht) - Typ 2-Elemente
(IEC 61158-4-2:2023)

This European Standard was approved by CENELEC on 2023-04-13. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

Ref. No. EN IEC 61158-4-2:2023 E

European foreword

The text of document 65C/1202/FDIS, future edition 5 of IEC 61158-4-2, prepared by SC 65C "Industrial networks" of IEC/TC 65 "Industrial-process measurement, control and automation" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 61158-4-2:2023.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2024-01-13
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2026-04-13

This document supersedes EN IEC 61158-4-2:2019 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

Endorsement notice

The text of the International Standard IEC 61158-4-2:2023 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standard indicated:

- | | |
|----------------------|---|
| IEC 61131-9 | NOTE Approved as EN IEC 61131-9 |
| IEC 61158-1 | NOTE Approved as EN IEC 61158-1 |
| IEC 61158-2 | NOTE Approved as EN 61158-2 |
| IEC 61784-1 (series) | NOTE Approved as EN IEC 61784-1 (series) ¹ |

FOREWORD	16
INTRODUCTION	18
1 Scope	19
1.1 General	19
1.2 Specifications	19
1.3 Procedures	19
1.4 Applicability	20
1.5 Conformance	20
2 Normative references	20
3 Terms, definitions, symbols, abbreviated terms and conventions	22
3.1 Reference model terms and definitions	22
3.2 Service convention terms and definitions	24
3.3 Common terms and definitions	24
3.4 Additional Type 2 definitions	25
3.5 Type 2 symbols and abbreviated terms	33
3.6 Conventions for station management objects	34
4 Overview of the data-link protocol.....	35
4.1 General.....	35
4.1.1 DLL architecture	35
4.1.2 Access control machine (ACM) and scheduling support functions	37
4.1.3 Connection-mode, connectionless-mode data transfer and DL service	37
4.2 Services provided by the DL	37
4.2.1 Overview	37
4.2.2 QoS	38
4.3 Structure and definition of DL-addresses	38
4.3.1 General	38
4.3.2 MAC ID address	39
4.3.3 Generic tag address	40
4.3.4 Fixed tag address	40
4.4 Services assumed from the PhL.....	41
4.4.1 General requirements	41
4.4.2 Data encoding rules.....	41
4.4.3 DLL to PhL interface	42
4.5 Functional classes	44
5 General structure and encoding of PhIDUs and DLPDUs and related elements of procedure	44
5.1 Overview	44
5.2 Media access procedure	44
5.3 DLPDU structure and encoding	48
5.3.1 General	48
5.3.2 DLPDU components	48
5.3.3 Preamble	48
5.3.4 Start and end delimiters.....	48
5.3.5 DLPDU octets and ordering	48
5.3.6 Source MAC ID.....	49
5.3.7 Lpackets field	49
5.3.8 Frame check sequence (FCS).....	49

5.3.9	Null DLPDU	52
5.3.10	Abort DLPDU.....	52
5.4	Lpacket components	52
5.4.1	General Lpacket structure.....	52
5.4.2	Size	53
5.4.3	Control	53
5.4.4	Generic tag Lpackets.....	53
5.4.5	Fixed tag Lpackets	54
5.5	DLPDU procedures	54
5.5.1	General	54
5.5.2	Sending scheduled DLPDUs	55
5.5.3	Sending unscheduled DLPDUs	55
5.5.4	Receiving DLPDUs	55
5.6	Summary of DLL support services and objects	56
6	Specific DLPDU structure, encoding and procedures	57
6.1	Modeling language.....	57
6.1.1	State machine description.....	57
6.1.2	Use of DLL- prefix	58
6.1.3	Data types	58
6.2	DLS user services.....	59
6.2.1	General	59
6.2.2	Connected mode and connectionless mode transfer service	60
6.2.3	Queue maintenance service	61
6.2.4	Tag filter service	61
6.2.5	Link synchronization service	62
6.2.6	Synchronized parameter change service.....	62
6.2.7	Event reports service	63
6.2.8	Bad FCS service.....	64
6.2.9	Current moderator service	64
6.2.10	Power up and online services	64
6.2.11	Enable moderator service	65
6.2.12	Listen only service	65
6.3	Generic tag Lpacket.....	65
6.3.1	General	65
6.3.2	Structure of the generic-tag Lpacket	65
6.3.3	Sending and receiving the generic-tag Lpacket.....	66
6.4	Moderator Lpacket	66
6.4.1	General	66
6.4.2	Structure of the moderator Lpacket.....	66
6.4.3	Sending and receiving the moderator Lpacket	66
6.5	Time distribution Lpacket	67

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

Part 4-2: Data-link layer protocol specification – Type 2 elements

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

Attention is drawn to the fact that the use of the associated protocol type is restricted by its intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a layer protocol type to be used with other layer protocols of the same type, or in other type combinations explicitly authorized by its intellectual-property-right holders.

NOTE Combinations of protocol types are specified in the IEC 61784-1 series and the IEC 61784-2 series.

IEC 61158-4-2 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation. It is an International Standard.

This fifth edition cancels and replaces the fourth edition published in 2019. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- a) update of normative and bibliographic references;
- b) use of more inclusive terminology ("master" and "slave" replaced, mainly in 7.3 and 7.7);
- c) new STIME, UTIME, NTIME, STRINGI and EPATH data types in 6.1.3;
- d) updates, addition of diagnostics connection points and new service for TCP/IP interface object in 7.5;
- e) addition of diagnostics connection points and new service for Ethernet Link object in 7.6;
- f) update of Get/Set_Attributes_All parameters for the Connection Configuration object in 7.8;
- g) addition of diagnostics connection points and new service for DLR object in 7.9;
- h) extensions and clarifications of Port object in 7.11;
- i) addition of diagnostics connection points and new service for PRP/HSR Protocol object in 7.12;
- j) addition of LLDP Management and LLDP Data Table objects in 7.1, 7.14 and 7.15;
- k) addition of LLDP protocol support in Clause 12;
- l) addition of a combined module/network indicator in A.2.4.5;
- m) removal of all references to CPF and CPs (material moved to profile documents);
- n) miscellaneous editorial corrections.

The text of this International Standard is based on the following documents:

Draft	Report on voting
65C/1202/FDIS	65C/1243/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts of the IEC 61158 series, published under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.

INTRODUCTION

This part of IEC 61158 is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the "three-layer" fieldbus reference model described in IEC 61158-1.

The data-link protocol provides the data-link service by making use of the services available from the physical layer. The primary aim of this document is to provide a set of rules for communication expressed in terms of the procedures to be carried out by peer data-link entities (DLEs) at the time of communication. These rules for communication are intended to provide a sound basis for development in order to serve a variety of purposes:

- a) as a guide for implementers and designers;
- b) for use in the testing and procurement of equipment;
- c) as part of an agreement for the admittance of systems into the open systems environment;
- d) as a refinement to the understanding of time-critical communications within OSI.

This document is concerned, in particular, with the communication and interworking of sensors, effectors and other automation devices. By using this document together with other standards positioned within the OSI or fieldbus reference models, otherwise incompatible systems could work together in any combination.

The International Electrotechnical Commission (IEC) draws attention to the fact that it is claimed that compliance with this document may involve the use of patents. IEC takes no position concerning the evidence, validity, and scope of these patent rights.

The holders of these patent rights have assured IEC that they are willing to negotiate licences under reasonable and non-discriminatory terms and conditions with applicants throughout the world. In this respect, the statement of the holders of these patent rights is registered with IEC. Information may be obtained from the patent database available at <http://patents.iec.ch>.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights other than those in the patent database. IEC shall not be held responsible for identifying any or all such patent rights.

INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

Part 4-2: Data-link layer protocol specification – Type 2 elements

1 Scope

1.1 General

The data-link layer provides basic time-critical messaging communications between devices in an automation environment.

This part of IEC 61158 specifies a main protocol with the following characteristics.

- This protocol provides communication opportunities to all participating data-link entities, sequentially and in a cyclic synchronous manner. Foreground scheduled access is available for time-critical activities together with background unscheduled access for less critical activities.
- Deterministic and synchronized transfers can be provided at cyclic intervals up to 1 ms and device separations of 25 km. This performance is adjustable dynamically and on-line by re-configuring the parameters of the local link whilst normal operation continues. By similar means, DL connections and new devices can be added or removed during normal operation.
- This protocol provides means to maintain clock synchronization across an extended link with a precision better than 10 µs.
- This protocol optimizes each access opportunity by concatenating multiple DLSDUs and associated DLPCI into a single DLPDU, thereby improving data transfer efficiency for data-link entities that actively source multiple streams of data.
- The maximum system size is an unlimited number of links of 99 nodes, each with 255 DLSAP-addresses. Each link has a maximum of 2^{24} related peer and publisher DLCEPs.

This document specifies additional lower layers protocols or implementations of additional lower layers protocols for use in combination with ISO/IEC/IEEE 8802-3.

This document specifies a set of corresponding objects providing a consistent management interface to the lower layers.

1.2 Specifications

This document specifies

- a) procedures for the timely transfer of data and control information from one data-link user entity to a peer user entity, and among the data-link entities forming the distributed data-link service provider;
- b) the structure of the fieldbus DLPDUs used for the transfer of data and control information by the protocol of this document, and their representation as physical interface data units.

1.3 Procedures

The procedures are defined in terms of

- a) the interactions between peer DL-entities (DLEs) through the exchange of fieldbus DLPDUs;
- b) the interactions between a DL-service (DLS) provider and a DLS-user in the same system through the exchange of DLS primitives;

- c) the interactions between a DLS-provider and a Ph-service provider in the same system through the exchange of Ph-service primitives.

1.4 Applicability

These procedures are applicable to instances of communication between systems which support time-critical communications services within the data-link layer of the OSI or fieldbus reference models, and which require the ability to interconnect in an open systems interconnection environment.

Profiles provide a simple multi-attribute means of summarizing capabilities of an implementation, and thus its applicability to various time-critical communications needs.

1.5 Conformance

This document also specifies conformance requirements for systems implementing these procedures. This document does not contain tests to demonstrate compliance with such requirements.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

NOTE All parts of the IEC 61158 series, as well as the IEC 61784-1 series and the IEC 61784-2 series are maintained simultaneously. Cross-references to these documents within the text therefore refer to the editions as dated in this list of normative references.
