About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search -

webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee, ...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

IEC Products & Services Portal - products.iec.ch

Discover our powerful search engine and read freely all the publications previews, graphical symbols and the glossary. With a subscription you will always have access to up to date content tailored to your needs.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 500 terminological entries in English and French, with equivalent terms in 25 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

Warning! Make sure that you obtained this publication from an authorized distributor.

CONTENTS

FOREWORD	7
INTRODUCTION	8
1 Scope	9
2 Normative references	9
3 Terms and definitions	9
4 Abbreviated terms	12
5 Data analysis of BCI use cases	12
5.1 List of use cases	12
5.2 Application domains	14
5.3 Data characteristics and processing methods	14
5.3.1 General	14
5.3.2 The characteristics of EEG	14
5.3.3 EEG signal processing methods	15
5.4 BCI common challenges and issues	15
5.4.1 General	15
5.4.2 Automatic labelling	16
5.4.3 Experimental preparation	16
5.4.4 Mind focusing requirement	16
5.4.5 Data security	16
5.4.6 Minimized damage for implantable BCI	16
5.4.7 Signal acquisition (noise, interference, etc.)	16
5.4.8 Effect difference on inter-subjects or inter-devices	16
5.4.9 Algorithm-related signal classification accuracy	16
5.4.10 Portable and comfortable BCI system	16
5.4.11 Amount of data	16
5.5 Types, setup, benefits and portability	16
5.5.1 Invasive or non-invasive	16
5.5.2 Required acquisition setup	17
5.5.3 Benefits	17
5.5.4 Portability	18
6 Standardization requirements	19
6.1 Summary of standardization requirements of collected BCI use cases	19
6.2 Standardization requirements analysis of collected BCI use cases	23
6.2.1 Standardization requirements categorization	23
6.2.2 Standardization requirements statistics	24
6.2.3 Standardization requirements discussion	24
6.3 Conclusion	25
7 Use cases	25
7.1 Overview	25
7.2 General information on use case	26
7.3 Smart environment	26
7.3.1 Passive brain-computer interface-based adaptive automation (use case 1)	26
7.3.2 BCI-based smart ward system (use case 2)	28
7.3.3 Brain-machine interface (BMI) enabled assistive communication system (use case 3)	29

7.3.4	Monitoring and early warning technology for the fitness of special operations personnel based on EEG signals (use case 4)	32
7.4	Medical and health.....	33
7.4.1	Minimally invasive implanted closed-loop brain-computer interface system (use case 5)	33
7.4.2	Neural state dependent closed-loop deep brain stimulation (use case 6).....	35
7.4.3	Invasive brain cursor control system (use case 7)	37
7.4.4	Multi-site closed-loop neurostimulation for clinical seizure modulation (use case 8)	38
7.4.5	AR-based brain-computer interface for upper limb rehabilitation (use case 9)	40
7.4.6	Brain-controlled robot grabbing to assist daily life (use case 10).....	42
7.4.7	Rehabilitation training system based on MI-BCI (use case 11).....	44
7.4.8	Brain-computer interface in diagnosis and treatment of depression (use case 12).....	45
7.4.9	The M-score: motor function assessment using BCI (use case 13).....	46
7.4.10	Shen Gong robotics: BCI-driven rehabilitation training system (use case 14).....	48
7.4.11	Music intervention based on brain-computer interface system (use case 15).....	49
7.4.12	Wearable seizure onset detection system (use case 16)	51
7.4.13	Clinical diagnosis and prognosis in patients with disorders of consciousness (DOC) (use case 17)	52
7.4.14	An adaptive AR display to improve situational awareness using BCI in stressful and fatigue-inducing situations (use case 18)	55
7.4.15	Portable brain-related symptom screening, monitoring and surveillance system using non-invasive electroencephalograph (use case 19).....	58
7.4.16	Portable brain-related symptom management system using non-invasive brain stimulation (use case 20)	59
7.4.17	Automated seizure detection and prediction (use case 21)	61
7.4.18	Near-infrared BCI intervention in patients with stroke (use case 22).....	62
7.4.19	Fusion of multi-modal fNIRs and EEG information for motor imagery classification (use case 23).....	64
7.4.20	BCI controlled exoskeleton with seven degrees of freedom for assistance and rehabilitation applications (use case 24)	65
7.4.21	BCI controlled wheelchair for assistance and rehabilitation (use case 25).....	66
7.5	Learning, education and training	68
7.5.1	Reading assessment apparatus (RAA) (use case 26).....	68
7.5.2	BCI-based biofeedback for accelerated learning (use case 27)	69
7.6	Industrial controls	72
7.6.1	Brain-computer interface in aerospace applications (use case 28).....	72
7.6.2	T-Drone (use case 29).....	74
7.7	Gaming.....	76
7.7.1	Cognitive regulation based on brain-computer interface game (use case 30).....	76
7.7.2	The MindGomoku: an online P300 BCI game (use case 31).....	77
7.8	Security and authentication.....	79
7.8.1	Non-invasive brain signal-based biometrics system (use case 32).....	79
Annex A (informative)	Figures from the collected use cases.....	82

INFORMATION TECHNOLOGY – BRAIN-COMPUTER INTERFACES – USE CASES

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) IEC and ISO draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC and ISO take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC and ISO had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch> and www.iso.org/patents. IEC and ISO shall not be held responsible for identifying any or all such patent rights.

ISO/IEC 27599 has been prepared by subcommittee SC 43: Brain-computer interfaces, of IEC technical committee JTC 1: Information technology. It is a Technical Report.

The text of this Technical Report is based on the following documents:

Draft	Report on voting
JTC1-SC43/134/DTR	JTC1-SC43/152/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1, and the ISO/IEC Directives, JTC 1 Supplement available at www.iec.ch/members_experts/refdocs and www.iso.org/directives.

INTRODUCTION

Brain-computer interface (BCI) has unique technical aspects, and there are few similar international standards or technical reports.

This document provides a collection of representative use cases of brain-computer interface applications in a variety of domains. The current document reflects contributions and discussions by ISO/IEC JTC 1/SC 43 experts and liaison members.

In particular, SC 43 performed research on the standardization requirements of BCI, and this document presents the conclusions. BCI technology is gradually being applied to many real-world application fields, including smart environments, medical and health, education, industrial control, and gaming. In the future, this technology will bring new changes and developments in more fields. Therefore, to ensure that BCI technology can better benefit humans, it is important to carry out standardization research work on the technology, which mainly focuses on the standardization of BCI technology, ethics, and safety.

INFORMATION TECHNOLOGY – BRAIN-COMPUTER INTERFACES – USE CASES

1 Scope

This document provides a collection of representative use cases of brain-computer interface (BCI) applications in a variety of domains: proposed medical and health, industrial controls, smart environment, etc.

This document can be used for the development of potential standards, and it is valuable for a better comprehension of BCI.

This document is also helpful for BCI industries and products that provide support for communications among interested parties and stakeholders.

This document is applicable to all types of organizations (e.g. commercial enterprises, government agencies, not-for-profit organizations).
