## CONTENTS

FOREWORD .....	16
INTRODUCTION .....	18
1 Scope .....	19
1.1 Overview .....	19
1.2 Specifications .....	20
1.3 Conformance .....	20
2 Normative references .....	20
3 Terms, definitions, abbreviations, symbols and conventions .....	22
3.1 Referenced terms and definitions .....	22
3.2 Additional terms and definitions for distributed automation .....	23
3.3 Additional terms and definitions for decentralized periphery .....	25
3.4 Additional terms and definitions for media redundancy .....	33
3.5 Abbreviations and symbols .....	34
3.6 Additional abbreviations and symbols for distributed automation .....	35
3.7 Additional abbreviations and symbols for decentralized periphery .....	35
3.8 Additional abbreviations and symbols for media redundancy .....	36
3.9 Conventions .....	36
4 Concepts .....	39
5 Data type ASE .....	39
5.1 General .....	39
5.2 Formal definition of data type objects .....	42
5.3 FAL defined data types .....	43
5.4 Data type ASE service specification .....	86
6 Communication model for common services .....	86
6.1 Concepts .....	86
6.2 ASE data types .....	86
6.3 ASEs .....	87
7 Communication model for distributed automation .....	184
7.1 Concepts .....	184
7.2 ASE data types .....	191
7.3 ASEs .....	195
7.4 ARs .....	412
7.5 Summary of FAL classes .....	416
7.6 Summary of FAL services .....	417
8 Communication model for decentralized periphery .....	420
8.1 Concepts .....	420
8.2 ASE data types .....	436
8.3 ASEs .....	436
8.4 Behavior of an IO device .....	671
8.5 Behavior of an IO controller .....	737
8.6 Application characteristics .....	744

Annex A (informative) Device instances .....	746
Annex B (informative) Components of an Ethernet interface .....	748
Annex C (informative) Scheme of MAC address assignment .....	752
Annex D (informative) Collection of objects .....	753
Annex E (informative) Measurement of the fast startup time .....	754
Bibliography .....	755
Figure 1 – Data type class hierarchy example .....	40
Figure 2 – NetworkTime date relation .....	63
Figure 3 – UTF-8 coding of four different characters .....	67
Figure 4 – PTCP applications .....	100
Figure 5 – Clock drift measurement .....	110
Figure 6 – Multiple synchronization .....	110
Figure 7 – MRP stack .....	112
Figure 8 – Ring topology with one manager and clients .....	123
Figure 9 – MRM in an open ring .....	123
Figure 10 – More than one MRM in the ring .....	125
Figure 11 – Media redundancy diagnosis dependencies .....	126
Figure 12 – Locating the destination for redundant RT frames .....	165
Figure 13 – Example of periods at a local port .....	172
Figure 14 – FAL ASEs communication architecture .....	187
Figure 15 – Runtime object model .....	188
Figure 16 – Relationship between engineering and runtime .....	189
Figure 17 – Navigation in the runtime object model .....	190
Figure 18 – Operating state block diagram .....	229
Figure 19 – Device status model for the common diagnosis .....	230
Figure 20 – ACCO ASE structure .....	261
Figure 21 – Productive operation of data connections .....	262
Figure 22 – Quality code transfer – standard behavior .....	274
Figure 23 – Startup of a connection .....	275
Figure 24 – Quality code with communication fault .....	275
Figure 25 – Quality code when a connection is cleared .....	276
Figure 26 – Quality code when a connection is deactivated .....	276
Figure 27 – Quality code during the transfer of "incorrect" connection data .....	277
Figure 28 – Quality code for provider in "CBAReady" state .....	278
Figure 29 – Quality code when clearing an object from the provider .....	278
Figure 30 – Quality code when a connection is forced .....	279
Figure 31 – Quality code at QoS violation .....	279
Figure 32 – Push mode .....	286
Figure 33 – Pull mode overview .....	287

Figure 34 – Detailed sequence chart of the pull mode .....	288
Figure 35 – QoS and ORPC communication channel.....	289
Figure 36 – QoS Violation within Pull Mode.....	290
Figure 37 – Monitoring the providers heartbeat .....	291
Figure 38 – State machine RemoteAcco .....	293
Figure 39 – State machine RemoteAccoProvider.....	293
Figure 40 – State machine RemoteAccoProvider <sub>ORPC</sub> .....	294
Figure 41 – State machine AR <sub>ORPC</sub> – Provider .....	294
Figure 42 – State machine GetConnectionData – Provider .....	295
Figure 43 – State machine ProviderConnection.....	295
Figure 44 – State machine ProvConnActivation.....	296
Figure 45 – State machine WorkerORPC .....	296
Figure 46 – Communication stack of distributed automation devices .....	297
Figure 47 – Application relations between devices .....	298
Figure 48 – Communication relations .....	298
Figure 49 – RT communication channel .....	300
Figure 50 – Interaction between provider and consumer .....	302
Figure 51 – State machine AR <sub>SRT</sub> – Consumer .....	304
Figure 52 – State machine AR <sub>SRT</sub> – Provider .....	304
Figure 53 – State machine AccoDataCR – Consumer.....	305
Figure 54 – State machine AccoDataCR – Provider .....	306
Figure 55 – RT frame layout.....	307
Figure 56 – Establishing an AccoDataCR.....	308
Figure 57 – Flowchart of the copy cycle for local connections .....	309
Figure 58 – State machine connect attempt .....	313
Figure 59 – Productive operation of data connections (ORPC channel).....	320
Figure 60 – Productive operation of data connections (RT channel) .....	321
Figure 61 – Productive operation of data connections (Local channel) .....	321
Figure 62 – Data flow for cyclic RT .....	322
Figure 63 – Failure of the provider in productive operation (ORPC push mode).....	324
Figure 64 – Failure of the provider in productive operation (ORPC pull mode) .....	325
Figure 65 – Scenario 1: Provider failure in productive operation (RT).....	326
Figure 66 – Scenario 2: Recovery from provider failure in productive operation (RT).....	327
Figure 67 – Failure of the consumer (push mode) .....	327
Figure 68 – Failure of the consumer (pull mode) .....	328
Figure 69 – Failure of the consumer.....	329
Figure 70 – Failure of the provider when setting up connections .....	331
Figure 71 – Information levels .....	332
Figure 72 – ACCO ASE status model for the common diagnosis .....	332
Figure 73 – ACCO ASE status model for the detailed diagnosis .....	333
Figure 74 – Structure of the transmitted connection data .....	375

Figure 75 – Example of communication between controlling devices and field devices .....	421
Figure 76 – Example of communication between an engineering station and several controlling and field devices .....	421
Figure 77 – Example of communication between field devices and a server station.....	422
Figure 78 – Example of communication between field devices .....	422
Figure 79 – Structural units of one arbitrary API of an IO device (general) .....	424
Figure 80 – Example 1 structural units for interfaces and ports within API 0.....	425
Figure 81 – Example 2 structural units for interfaces and ports within API 0.....	426
Figure 82 – Overview of application processes .....	428
Figure 83 – IO device with APs, slots and subslots .....	429
Figure 84 – Application Process with application objects (APOs) .....	432
Figure 85 – Access to a remote APO .....	433
Figure 86 – Access to a remote APO for provider/consumer association .....	434
Figure 87 – Example of one AR with two AREPs .....	435
Figure 88 – Relation of a record data object to one real object.....	437
Figure 89 – Relation of a record data object to two real objects .....	438
Figure 90 – Overview IO ASE service interactions .....	448
Figure 91 – Example of a resource model at the alarm source .....	525
Figure 92 – General isochronous application model (example).....	560
Figure 93 – ASE relations in an IO device operating in isochronous mode .....	566
Figure 94 – State machine relations in an IO device operating in isochronous mode .....	566
Figure 95 – SyncCtl state diagram .....	570
Figure 96 – Output state diagram.....	572
Figure 97 – Input state diagram .....	577
Figure 98 – Assignment of communication relationship to application relationship .....	650
Figure 99 – Implicit application relationship.....	653
Figure 100 – Example IO application relationship (one-to-one) .....	655
Figure 101 – Example IO application relationship one-to-many .....	656
Figure 102 – Overview ASE state machines for IO device .....	672
Figure 103 – State diagram application startup IO device.....	673
Figure 104 – State diagram startup manager IO device .....	681
Figure 105 – State diagram IRT port state IO device (standard).....	684
Figure 106 – State diagram IRT port state IO device (optimized).....	696
Figure 107 – State diagram neighborhood check.....	703
Figure 108 – State diagram PD parameter check IO device .....	712
Figure 109 – State diagram for a submodule .....	722
Figure 110 – State diagram IO controller during startup .....	738
Figure 111 – State diagram startup manager IO controller .....	741
Figure 112 – Example of network topology including slower wireless segments .....	745
Figure 113 – Example of media redundancy including wireless segments .....	745
Figure A.1 – Instance model .....	746

Figure B.1 – Scheme of an Ethernet interface .....	748
Figure B.2 – Scheme of an Ethernet interface with bridging ability .....	749
Figure B.3 – Scheme of an Ethernet interface with optical ports .....	750
Figure B.4 – Scheme of an Ethernet interface with bridging ability using radio communication .....	751
Figure B.5 – Scheme of an Ethernet interface with radio communication .....	751
Figure C.1 – Scheme of MAC address assignment .....	752
Figure D.1 – Example for an intersection of IO device, slot, and AR .....	753
Figure E.1 – Measurement of the fast startup time .....	754
 Table 1 – PERSISTDEF .....	46
Table 2 – VARTYPE .....	47
Table 3 – ITEMQUALITYDEF .....	47
Table 4 – STATEDEF .....	51
Table 5 – GROUPERRORDEF .....	51
Table 6 – ACCESSRIGHTSDEF .....	51
Table 7 – HRESULT .....	52
Table 8 – N2 value range .....	56
Table 9 – N2 octets .....	56
Table 10 – N4 value range .....	57
Table 11 – N4 octets .....	57
Table 12 – X2 value range .....	58
Table 13 – X2 octets .....	58
Table 14 – X4 value range .....	58
Table 15 – X4 octets .....	58
Table 16 – Unipolar2.16 value range .....	59
Table 17 – Unipolar2.16 octets .....	59
Table 18 – E2 value range .....	59
Table 19 – E2 octets .....	59
Table 20 – C4 value range .....	60
Table 21 – V2 octets .....	60
Table 22 – L2 octets .....	60
Table 23 – UUID for decentralized peripherals .....	61
Table 24 – UUID for distributed automation .....	62
Table 25 – NetworkTime values .....	63
Table 26 – NetworkTime octets .....	63
Table 27 – T2 values .....	64
Table 28 – T4 values .....	64
Table 29 – D2 values .....	65
Table 30 – R2 values .....	65
Table 31 – UNICODEString values .....	66

Table 32 – UTF-8 character encoding scheme .....	67
Table 33 – OctetString2+Unsigned8 octets .....	78
Table 34 – Float32+Unsigned8 octets .....	79
Table 35 – Unsigned8+Unsigned8 octets .....	79
Table 36 – Data Types for Value in a VARIANT .....	82
Table 37 – Unsigned16_S octets.....	83
Table 38 – Unsigned16_S meaning.....	83
Table 39 – Integer16_S octets .....	84
Table 40 – Integer16_S meaning .....	84
Table 41 – Unsigned8_S octets .....	84
Table 42 – Unsigned8_S meaning.....	84
Table 43 – OctetString_S octets .....	85
Table 44 – OctetString_S status bits .....	85
Table 45 – F message trailer with 4 octets .....	85
Table 46 – F message trailer with 5 octets .....	86
Table 47 – Get .....	92
Table 48 – Set .....	94
Table 49 – Identify .....	97
Table 50 – Hello.....	98
Table 51 – Clock stratum .....	102
Table 52 – Start bridge .....	104
Table 53 – Start slave .....	105
Table 54 – Start master .....	106
Table 55 – Stop bridge.....	107
Table 56 –Stop slave .....	107
Table 57 – Stop master.....	108
Table 58 – State change .....	109
Table 59 – Start MRM .....	117
Table 60 – Stop MRM .....	119
Table 61 – Change state .....	119
Table 62 – Start MRC .....	120
Table 63 – Stop MRC.....	121
Table 64 – Neighborhood changed.....	122
Table 65 – MRP network/connection parameters .....	127
Table 66 – MRM parameters .....	127
Table 67 – MRC parameters .....	127
Table 68 – Set prov data.....	128
Table 69 – Set prov status .....	129
Table 70 – PPM activate .....	130
Table 71 – Close.....	131
Table 72 – Start .....	131

Table 73 – Error .....	132
Table 74 – Get cons data .....	132
Table 75 – Get cons status .....	133
Table 76 – Set redRole .....	133
Table 77 – CPM activate .....	134
Table 78 – APMS activate .....	138
Table 79 – APMR activate .....	139
Table 80 – APMS A data .....	140
Table 81 – APMR A data .....	141
Table 82 – APMR ack .....	141
Table 83 – APMS error .....	142
Table 84 – APMS error ERRCLS/ERRCODE .....	142
Table 85 – APMR error .....	143
Table 86 – APMR error ERRCLS/ERRCODE .....	143
Table 87 – APMS_Close .....	143
Table 88 – APMR_Close .....	144
Table 89 – Connect .....	145
Table 90 – Release .....	146
Table 91 – Read .....	147

# INTERNATIONAL ELECTROTECHNICAL COMMISSION

## INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

### Part 5-10: Application layer service definition – Type 10 elements

#### FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with an IEC Publication.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

NOTE Use of some of the associated protocol types is restricted by their intellectual-property-right holders. In all cases, the commitment to limited release of intellectual-property-rights made by the holders of those rights permits a particular data-link layer protocol type to be used with physical layer and application layer protocols in type combinations as specified explicitly in the IEC 61784 series. Use of the various protocol types in other combinations may require permission of their respective intellectual-property-right holders.

International Standard IEC 61158-5-10 has been prepared by subcommittee 65C: Industrial networks, of IEC technical committee 65: Industrial-process measurement, control and automation.

This first edition and its companion parts of the IEC 61158-5 subseries cancel and replace IEC 61158-5:2003. This edition of this part constitutes a technical revision. This part and its Type 10 companion parts also cancel and replace IEC/PAS 62411, published in 2005.

This edition of IEC 61158-5-10 includes the following significant changes from the previous edition:

- a) deletion of the former Type 6 fieldbus, and the former Type 1 fieldbus application layer, for lack of market relevance;

- b) addition of new types of fieldbuses;
- c) partition of part 5 of the third edition into multiple parts numbered -5-2, -5-3, ...

The text of this standard is based on the following documents:

FDIS	Report on voting
65C/475/FDIS	65C/486/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the maintenance result date indicated on the IEC web site under <http://webstore.iec.ch> in the data related to the specific publication. At this date, the publication will be:

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.

NOTE The revision of this standard will be synchronized with the other parts of the IEC 61158 series.

The list of all the parts of the IEC 61158 series, under the general title *Industrial communication networks – Fieldbus specifications*, can be found on the IEC web site.

## INTRODUCTION

This part of IEC 61158 is one of a series produced to facilitate the interconnection of automation system components. It is related to other standards in the set as defined by the "three-layer" fieldbus reference model described in IEC/TR 61158-1.

The application service is provided by the application protocol making use of the services available from the data-link or other immediately lower layer. This standard defines the application service characteristics that fieldbus applications and/or system management may exploit.

Throughout the set of fieldbus standards, the term "service" refers to the abstract capability provided by one layer of the OSI Basic Reference Model to the layer immediately above. Thus, the application layer service defined in this standard is a conceptual architectural service, independent of administrative and implementation divisions.

## INDUSTRIAL COMMUNICATION NETWORKS – FIELDBUS SPECIFICATIONS –

### Part 5-10: Application layer service definition – Type 10 elements

## 1 Scope

### 1.1 Overview

The fieldbus Application Layer (FAL) provides user programs with a means to access the fieldbus communication environment. In this respect, the FAL can be viewed as a "window between corresponding application programs."

This standard provides common elements for basic time-critical and non-time-critical messaging communications between application programs in an automation environment and material specific to type 10 fieldbus. The term "time-critical" is used to represent the presence of a time-window, within which one or more specified actions are required to be completed with some defined level of certainty. Failure to complete specified actions within the time window risks failure of the applications requesting the actions, with attendant risk to equipment, plant and possibly human life.

This standard defines in an abstract way the externally visible service provided by the type 10 fieldbus Application Layer in terms of

- a) an abstract model for defining application resources (objects) capable of being manipulated by users via the use of the FAL service;
- b) the primitive actions and events of the service;
- c) the parameters associated with each primitive action and event, and the form which they take; and
- d) the interrelationship between these actions and events, and their valid sequences.

The purpose of this standard is to define the services provided to

- 1) the FAL user at the boundary between the user and the Application Layer of the Fieldbus Reference Model, and
- 2) Systems Management at the boundary between the Application Layer and Systems Management of the Fieldbus Reference Model.

This standard specifies the structure and services of the type 10 IEC fieldbus Application Layer, in conformance with the OSI Basic Reference Model (ISO/IEC 7498) and the OSI Application Layer Structure (ISO/IEC 9545).

FAL services and protocols are provided by FAL application-entities (AE) contained within the application processes. The FAL AE is composed of a set of object-oriented Application Service Elements (ASEs) and a Layer Management Entity (LME) that manages the AE. The ASEs provide communication services that operate on a set of related application process object (APO) classes. One of the FAL ASEs is a management ASE that provides a common set of services for the management of the instances of FAL classes.

Although these services specify, from the perspective of applications, how request and responses are issued and delivered, they do not include a specification of what the requesting and responding applications are to do with them. That is, the behavioral aspects of the applications are not specified; only a definition of what requests and responses they can send/receive is specified. This permits greater flexibility to the FAL users in standardizing such object behavior. In addition to these services, some supporting services are also defined in this standard to provide access to the FAL to control certain aspects of its operation.

## 1.2 Specifications

The principal objective of this standard is to specify the characteristics of conceptual application layer services suitable for time-critical communications, and thus supplement the OSI Basic Reference Model in guiding the development of application layer protocols for time-critical communications.

A secondary objective is to provide migration paths from previously-existing industrial communications protocols. It is this latter objective which gives rise to the diversity of services standardized as the various Types of IEC 61158, and the corresponding protocols standardized in subparts of IEC 61158-6.

This specification may be used as the basis for formal Application Programming-Interfaces. Nevertheless, it is not a formal programming interface, and any such interface will need to address implementation issues not covered by this specification, including

- a) the sizes and octet ordering of various multi-octet service parameters, and
- b) the correlation of paired request and confirm, or indication and response, primitives.

## 1.3 Conformance

This standard does not specify individual implementations or products, nor do they constrain the implementations of application layer entities within industrial automation systems.

There is conformance of equipment to this application layer service definition standard mainly achieved through implementation of the modeled behavior of an application layer user (e.g. see user state machines) accompanied by implementation of conforming application layer protocols that fulfill the application layer services as defined in this standard.
