CONTENTS

FOREWORD.....	5
1 Scope.....	7
2 Normative references	7
3 Terms and definitions	8
4 General network and equipment requirements	11
4.1 Network topology example	11
4.2 Basic requirements.....	12
4.2.1 Requirements for equipment to be connected to the network	12
4.2.2 Additional requirements for network infrastructure equipment	12
4.3 Network function (NF) requirements	13
4.3.1 General requirements	13
4.3.2 Maximum data rate requirements.....	13
4.3.3 Error logging function	13
4.4 System function (SF) requirements.....	15
4.4.1 General requirements	15
4.4.2 Assignment of unique system function ID (SFI).....	15
4.4.3 Implementing configurable transmission groups.....	15
4.5 Serial to network gateway function (SNGF) requirements	16
4.5.1 General requirements	16
4.5.2 Serial line output buffer management	16
4.5.3 Datagram output requirements	17
4.6 Other network function (ONF) requirements	17
5 Low level network requirements.....	17
5.1 Electrical and mechanical requirements.....	17
5.2 Network protocol requirements	19
5.3 IP Address assignment for equipment	19
5.4 Multicast address range	19
6 Transport layer specification.....	19
6.1 General.....	19
6.2 UDP messages.....	20
6.2.1 UDP multicast protocol	20
6.2.2 Use of multicast addresses and port numbers.....	20
6.2.3 UDP checksum	21
6.2.4 Datagram size	21
7 Application layer specification	22
7.1 Datagram header	22
7.1.1 Valid header	22
7.1.2 Error logging.....	22
7.2 General IEC 61162-1 sentence transmissions	22
7.2.1 Application of this protocol	22
7.2.2 Types of messages for which this protocol can be used.....	22
7.2.3 TAG block parameters for sentences transmitted in the datagram	22
7.2.4 Requirements for processing incoming datagrams	24
7.2.5 Error logging.....	24
7.3 Binary image transfer using UDP multicast.....	24
7.3.1 Application of this protocol	24

7.3.2	Binary image structure.....	25
7.3.3	Header	25
7.3.4	Binary image descriptor structure	27
7.3.5	Binary image data fragment.....	28
7.3.6	Sender process for binary image transfer	28
7.3.7	Receiver process for binary image transfer.....	29
7.3.8	Other requirements.....	30
7.3.9	Error logging.....	31
8	Methods of test and required results.....	32
8.1	Test set-up and equipment	32
8.2	Basic requirements.....	32
8.2.1	Equipment to be connected to the network	32
8.2.2	Network infrastructure equipment	32
8.3	Network function (NF)	32
8.3.1	Maximum data rate	32
8.3.2	Error logging function	33
8.4	System function (SF).....	33
8.4.1	General	33
8.4.2	Assignment of unique system function ID (SFI).....	33
8.4.3	Implementing configurable transmission groups.....	33
8.5	Serial to network gateway function (SNGF)	33
8.5.1	General	33
8.5.2	Serial line output buffer management	33
8.5.3	Datagram output.....	34
8.6	Other network function (ONF).....	34
8.7	Low level network.....	34
8.7.1	Electrical and mechanical requirements.....	34
8.7.2	Network protocol	34
8.7.3	IP address assignment for equipment.....	35
8.7.4	Multicast address range.....	35
8.8	Transport layer	35
8.9	Application layer.....	35
8.9.1	Application	35
8.9.2	Datagram header.....	35
8.9.3	Types of messages.....	36
8.9.4	TAG block parameters	36
8.10	Error logging	36
8.11	Binary image transfer using UDP multicast.....	37
8.11.1	Sender process test.....	37
8.11.2	Receiver process test.....	38
8.11.3	Image descriptor test.....	38
8.11.4	Image transfer error logging	38
Annex A	(normative) Classification of IEC 61162-1 talker identifier mnemonics and sentences	39
Annex B	(informative) TAG block example	45
Annex C	(normative) Reliable transmission of command-response pair messages.....	47
Annex D	(informative) Network and system design guidance	52
Bibliography	60

Ethernet interconnection**
FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61162-450 has been prepared by IEC technical committee 80: Maritime navigation and radiocommunication equipment and systems.

The text of this standard is based on the following documents:

FDIS	Report on voting
80/615/FDIS	80/621/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

The committee has decided that the contents of this publication will remain unchanged until the stability date indicated on the IEC web site under "<http://webstore.iec.ch>" in the data related to the specific publication. At this date, the publication will be

- transformed into an International standard,
- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

A bilingual version of this publication may be issued at a later date.

MARITIME NAVIGATION AND RADIOCOMMUNICATION EQUIPMENT AND SYSTEMS – DIGITAL INTERFACES –

Part 450: Multiple talkers and multiple listeners – Ethernet interconnection

1 Scope

This part of IEC 61162 specifies interface requirements and methods of test for high speed communication between shipboard navigation and radiocommunication equipment as well as between such systems and other ship systems that need to communicate with navigation and radio-communication equipment. This part of IEC 61162 is based on the application of an appropriate suite of existing international standards to provide a framework for implementing data transfer between devices on a shipboard Ethernet network.

This standard provides a higher speed and higher capacity alternative to the IEC 61162-1 and IEC 61162-2 standards while retaining these standards' basic data format. This standard provides a higher data capacity than IEC 61162-3.

This standard specifies an Ethernet based bus type network where any listener may receive messages from any sender with the following properties.

- This standard includes provisions for multicast distribution of information formatted according to IEC 61162-1, for example position fixes and other measurements, as well as provisions for transmission of general data blocks (binary image), for example between radar and VDR.
- This standard is limited to protocols for equipment (Network nodes) connected to a single Ethernet network consisting only of OSI level one or two devices and cables (Network infrastructure).
- This standard provides requirements only for equipment interfaces. By specifying protocols for transmission of IEC 61162-1 sentences and general binary image data these requirements will guarantee interoperability between equipment implementing this standard as well as a certain level of safe behaviour of the equipment itself.
- This standard permits equipment using other protocols than those specified in this standard to share a network infrastructure provided that it is supplied with interfaces which satisfy the requirements described for ONF (see 4.6).
- This standard does not contain any system requirements other than the ones that can be inferred from the sum of individual equipment requirements. Thus, to ascertain system properties that cannot be derived from equipment requirements alone, additional analysis or standards will be required. In particular, this applies to requirements to maintain system functionality in the face of a single point failure in equipment or networks. Informative Annex D contains guidance on how to address such issues.
